Michael has developed an app for tracking product defects. His navigation menu lists each product. He has defined application items and computations to hold the number of defects for each product. For example, for Hedgers, he has defined the application item HEDGER_DEFECTS.

How can Michael add the number of open defects in the navigation menu entries?

A. Update the Navigation Menu template to be Include Count.

B. Update Template Options and set Display Count to True.

C. Update the List Entry Label for Hedgers to Hedgers &HEDGER_DEFECTS., and similarly for other products.

D. Add &HEDGER_DEFECTS. to User Defined Attribute 01 in the navigation menu for Hedgers, and similarly for other products.

John is evaluating an old APEX application that has over 20 tabular forms. He wants to update the application and replace all of the tabular forms with interactive grids.

What is the fastest way for John to replace the old reports?

A. Go to each page with a tabular form, copy the SQL Source from the Tabular Form region, and use it to create a new interactive grid.

B. Use the Create Page Wizard to create new pages with interactive grids, and then delete the old pages with tabular forms.

C. Use the Upgrade Application utility and select the candidate objects listed for "Upgrade Tabular Form to Interactive Grid", select all, and then click Upgrade.

D. Go to each report and change the type from Tabular Form to Interactive Grid.

`Selected Answer: A`
This question seems to need an update. Oracle has change the options through the years. Some of the lastest (v23.1) are:
- After Submit (previously named Before Computation)
- Validating (previously named Before Validation)
- Processing (previously named Before Processing)

So this answer could be A or C.

https://docs.oracle.com/en/database/oracle/apex/23.1/htmdb/controlling-navigation-using-branches.html#GUID-09D6B7B0-25FE-4F36-A573-582FE605CB2C
  upvoted 1 times

 ⊟ **htroya** 1 year, 5 months ago
After Submit
Processing: Branches after submitting the page and before computation, validations and processes are executed.
  upvoted 2 times

 ⊟ **lucianoimelo** 1 year, 11 months ago
The answer is A:
On Submit: Before Computation - Branching occurs before computations, validations, or processing. Use this option for buttons that should not invoke processing (for example, a Cancel button).

BE (100%)

👤 **SuperDabicho** 1 year, 1 month ago

Selected Answer: BE

I've checked on my test project, and on APEX 23.1 are correct A, B, E.

(A is correct if we don't count on the columns with checkbox and selector that APEX creates automatically).

upvoted 1 times

👤 **htroya** 1 year, 5 months ago

answer B,E

upvoted 1 times

👤 **Nakhala** 2 years, 11 months ago

the answer is B&E

insert or update multiple records at a time

and defined Dynamic Action

upvoted 1 times

👤 **MaritoH** 3 years, 2 months ago

I think that you can insert or update multiple records at a time. A and B are the correct options.

upvoted 1 times

👤 **sbrand** 3 years, 6 months ago

Of course you can insert multiple records at a time. And you can update more than one record at a time. Correct: BE

upvoted 2 times

Sunny has developed a report and form on CUSTOMERS, which is open to partners. The report displays only customers associated with partners, based on their user credentials. Partners can click an Edit button to go to a form page to update their customers. Sunny is concerned that IT savvy users will be able to alter the
URL to be able to see and update records from other partners.
What must Sunny do to protect the form page from URL tampering?

A. Update Page Access Protection to Arguments Must Have Checksum

B. Set Authentication to Administration Rights

C. Set Rejoin Sessions to Disabled

D. Set Deep Linking to Disabled

E. Update Page Access Protection to No URL Access

Suggested Answer: *E*

Sam is updating an application with a report (Page 10) and form (Page 11), where the form page has Page Mode "Normal." She wants to update the form page to a modal dialog, so it can be called from multiple report pages.

Sam has already changed Page Mode to "Modal Dialog", removed the breadcrumb region, added a button region to the dialog footer, and moved the buttons to the new region. Whenever she opens the form page from a different report page (Page 15), it keeps returning to the original report page (Page 10) when she cancels or submits the form page.

Which three steps must Sam perform to get the modal page to always return to the report page from which it was called? (Choose three.)

A. Create a Dynamic Action of type Close Dialog that fires whenever the DELETE, SAVE, or CREATE button is pressed.

B. Change the action on the CANCEL button to "Defined by Dynamic Action."

C. Create a Dynamic Action of type Cancel Dialog that fires when the CANCEL button is clicked.

D. Add a Close Dialog process.

E. Add a branch that redirects to an item holding the calling page.

F. Create a hidden page item to hold the calling page and update the calls to the form page to populate the item.

G. Update the branch to return to the correct calling page.

Morgan has a report and form on the EMP table. He updated the form by adding a display-only item P5_LOC, and a change event dynamic action on P5_DEPTNO to populate the item using Set Value with this SQL: select loc from dept where deptno = :P5_DEPTNO;

When Morgan runs the page, he gets this error:

apex_error_code:

WWV_FLOW_DML.COLUMN_NOT_FOUND -
original message: Column LOC not found in table EMP
What should Morgan do to prevent this error?

    A. Update P5_LOC and set Source Type to "Null".

    B. Update P5_LOC and set Source Database Column to DEPTNO.

    C. Update P5_LOC and set Source Type to Item and select Item P5_DEPTNO.

    D. Update P5_LOC and set Save Session State to "No."

    E. Update P5_DEPTNO and set Type to "Display Only."

Suggested Answer: *A*

Phil has been given the responsibility for an application that was developed years ago, because the original developer has left the company.
End users have complained about accessibility because not all pages have titles.
How can Phil ensure that he corrects all pages in the app without page titles?

A. Run a query on the APEX_PAGE_DETAILS view where PAGE_TITLE is null

B. Use Application Advisor to perform a check

C. Ask end users to identify the problem pages

D. Bring up each page in Page Designer and review the Page Name

Suggested Answer: *B*

Susan created Page 10 as an interactive report, called Departments, on the DEPT table. She also created Page 11 as an interactive report on the EMP table, called Employees.

Susan would like to add a link in the Departments report (Page 10) that redirects to the Employees report (Page 11) and displays only employees for the selected department.

How would Susan set items in the link builder on Page 10 to correctly call the report on Page 11?

A. Set item name IR_DEPTNO and value to #DEPTNO#

B. Set item name to :P11_DEPTNO and value to :P10_DEPTNO

C. Set item name to :P11_DEPTNO and value to #DEPTNO#

D. Set item name to :P10_DEPTNO and value to #DEPTNO#

ABC Company developed an employee directly by using an interactive report.

The HR manager (an end user) has customized his or her report to show only employees in the HR department, and wants to review the same report weekly.

How can the HR manager achieve this?

    A. Add a control break on Department

    B. Add a filter to the report

    C. Save the report as a named report

    D. Save the report as the primary report

    E. Download the report to a CSV or HTML file

Betty has created a zip file, app100_files.zip, to include all of her static application files that she references in her application. The files are divided into different subdirectories for JavaScript and CSS.
How can Betty upload the static files, so they can be referenced, and maintain the subdirectory structure?

A. Unzip app100_files.zip, and upload each directory individually.

B. Upload app100_files.zip to the file server and unzip the file. In User Interface Properties, edit the Theme, and set JavaScript File URLs.

C. In Shared Components, create the required subdirectories. Unzip app100_files.zip, and upload each file into their subdirectories.

D. Upload app100_files.zip, and set Unzip File to Yes.

As a project manager, you use spreadsheets to keep track of multiple projects. As you took responsibility of more projects, you became tired of managing them in spreadsheets.

You have collated all of your project data in one single spreadsheet. You also want to maintain the data in an Oracle Database table by using an Oracle APEX application.

Which two actions can you take? (Choose two.)

A. Define a Data Loading page in the Create Application Wizard.

B. Use SQL Workshop > Utilities > Data Workshop to load the data into a new table, and then use the Create Application Wizard to create an application on the new table.

C. Create an application by using the Create Application Wizard, and then add a table for the spreadsheet data.

D. Use the Create Application Wizard and select "From a Spreadsheet."

E. Create a new table by using SQL Workshop > Object Browser > Create Table, and then use the Create Application Wizard to create an application based on the new table.

Which is true about the Button Name attribute?

A. When the page is submitted by clicking the button, the value of REQUEST is set to the button name.

B. The button name is a unique identifier on a page. No other buttons or page items on the page can have the same name.

C. The button name defines what database action is done on page submit.

D. The button name serves as a static ID, which is useful when developing custom JavaScript functionality for the button.
