

Actual exam question from Oracle's 1z0-819

Question #: 1

Topic #: 1

[\[All 1z0-819 Questions\]](#)

Given:

```
public class Tester {  
    public static void main(String[] args) {  
        int x = 0, y = 6;  
        for( ; x < y ; x++, y--) { // line 1  
            if (x%2 == 0) {  
                continue;  
            }  
            System.out.println(x+"-"+y);  
        }  
    }  
}
```

What is the result?

- A. 2-4
- B. 0-6
- 1-5
- 2-4
- C. 1-5
- D. 1-5
- 2-4
- E. The compilation fails due to an error in line 1.
- F. 0-6
- G. 0-6
- 2-4

[\[All 1z0-819 Questions\]](#)

Given:

```
import java.util.*;
public class Foo {
    public List<Integer> foo(Set<CharSequence> m) {....}
}
```

and

```
import java.util.*;
public class Bar extends Foo {
    //line n1
}
```

Which two method definitions at line n1 in the Bar class compile? (Choose two.)

- A. public List<Number> foo(Set<String> m) {...}
- B. public List<Integer> foo(Set<CharSequence> m) {...}
- C. public List<Integer> foo(TreeSet<String> m) {...}
- D. public List<Object> foo(Set<CharSequence> m) {...}
- E. public ArrayList<Integer> foo(Set<String> m) {...}
- F. public ArrayList<Number> foo(Set<CharSequence> m) {...}

Actual exam question from Oracle's 1z0-819

Question #: 8

Topic #: 1

[\[All 1z0-819 Questions\]](#)

Your organization makes mlib.jar available to your cloud customers. While working on a new feature for mlib.jar, you see that the customer visible method public void enableService(String hostName, String portNumber) executes this code fragment

```
try {
    AccessController.doPrivileged((PrivilegedExceptionAction<Void>) () -> {
        transportSocket = new Socket(hostname, portNumber);
        return null;
    });
}
```

and you see this grant is in the security policy file:

```
grant codebase "file:${mlib.home}/j2se/home/mlib.jar" {
    permission java.io.SocketPermission "*", "connect";
};
```

What security vulnerability does this expose to your cloud customer's code?

- A. privilege escalation attack against the OS running the customer code
- B. SQL injection attack against the specified host and port
- C. XML injection attack against any mlib server
- D. none because the customer code base must also be granted SocketPermission
- E. denial of service attack against any reachable machine

Topic #: 1

[\[All 1z0-819 Questions\]](#)

A company has an existing Java 8 jar file, sales-app-1.1.1.jar, that uses several Apache open source jar files that have not been modularized.

```
commons-beanutils-1.9.3.jar
commons-collections4-4.2.jar
(Automatic-Module-Name: org.apache.commons.collections4)
commons-lang3-3.8.1.jar
(Automatic-Module-Name: org.apache.commons.lang3)
commons-text-1.3.jar
(Automatic-Module-Name: org.apache.commons.text)
```

Which module-info.java file should be used to convert sales-app-1.1.jar to a module?

A. module com.company.sales_app {

```
    requires commons.beanutils;
    requires org.apache.commons.collections4;
    requires org.apache.commons.lang3;
    requires org.apache.commons.text;
}
```

B. module com.company.sales_app {

```
    requires org.apache.commons.beanutils;
    requires org.apache.commons.collections4;
    requires org.apache.commons.lang3;
    requires org.apache.commons.text;
}
```

C. module com.company.sales_app {

```
    requires commons.beanutils;
    requires commons.collections4;
    requires commons.lang3;
    requires commons.text;
}
```

D. module com.company.sales_app {

```
    requires commons.beanutils-1.9.3;
    requires commons.collections4-4.2;

Actual exam question from Oracle's 1z0-819

Question #: 24

Topic #: 1

[\[All 1z0-819 Questions\]](#)

Given:

```
import java.util.function.BiFunction;
public class Pair<T> {
    final BiFunction<T, T, Boolean> validator;
    T left = null;
    T right = null;
    private Pair() {
        validator=null;
    }
    Pair(BiFunction<T, T, Boolean> v, T x, T y) {
        validator = v;
        set(x, y);
    }
    void set(T x, T y) {
        if (!validator.apply(x, y)) throw new IllegalArgumentException();
        setLeft(x);
        setRight(y);
    }
    void setLeft(T x) {
        left = x;
    }
    void setRight(T y) {
        right = y;
    }
    final boolean isValid() {
        return validator.apply(left, right);
    }
}
```

It is required that if p instanceof Pair then p.isValid() returns true.

Which is the smallest set of visibility changes to insure this requirement is met?

- A. left, right, setLeft, and setRight must be private.
- B. setLeft and setRight must be protected.
- C. left and right must be private.
- D. isValid must be public.

    private int g = 0;
    public void foo(int h) {
        int i = 0;
    }
}
```

and

```
package com.foo.bar;
public class Bar extends com.foo.Foo {
    @Override
    public void foo(int j) {
        // line 1
    }
}
```

Which four identifiers from the Foo and Bar classes are visible at line 1? (Choose four.)

A. e

B. f

C. A

D. j

E. d

F. c

G. i

H. B

I. h

J. g

Which code fragment represents a valid Comparator implementation?

- A.

```
new Comparator<String>() {
    public int compareTo(String str1, String str2) {
        return str1.compareTo(str2);
    }
}
```
- B.

```
public class Comps implements Comparator {
    public int compare(String str1, String str2) {
        return str1.length() - str2.length();
    }
}
```
- C.

```
new Comparator<String>() {
    public int compare(String str1, String str2) {
        return str1.compareTo(str2);
    }
}
```
- D.

```
public class Comps implements Comparator {
    public boolean compare(Object obj1, Object obj2) {
        return obj1.equals(obj2);
    }
}
```

Topic #: 1

[\[All 1z0-819 Questions\]](#)

Given the code fragment:

```
public class Main {  
    public static void main(String[] args) {  
        List<Integer> list = new CopyOnWriteArrayList<>();  
        ExecutorService executorService = Executors.newFixedThreadPool(5);  
        CyclicBarrier barrier = new CyclicBarrier(2, () -> System.out.print(list));  
  
        IntStream.range(0, 5).forEach(n -> executorService.execute(() ->  
            { try {  
                list.add(n);  
                barrier.await();  
            } catch (InterruptedException | BrokenBarrierException e) {  
                System.out.println ("Exception");  
            }  
        }));  
        executorService.shutdown();  
    }  
}
```

Which statement is true?

- A. It never finishes.
- B. The action of CyclicBarrier is called five times.
- C. It finishes without any exception.
- D. Threads in executorService execute for each of the two threads.

Actual exam question from Oracle's 1z0-819

Question #: 29

Topic #: 1

[\[All 1z0-819 Questions\]](#)

Given:

```
public interface Rectangle {
    default double calculateSurfaceArea(double l, double w) {
        return l * w;
    }
}

public interface Ellipse {
    default double calculateSurfaceArea(double majorR, double minorR) {
        return Math.PI * majorR * minorR;
    }
}

public class Cylinder implements Rectangle, Ellipse {
    public double calculateSurfaceArea(double l, double w, double majorR, double minorR) {
        double rectArea = Rectangle.super.calculateSurfaceArea(l, w);
        double ellipseArea = Ellipse.super.calculateSurfaceArea(majorR, minorR);
        return rectArea + ellipseArea * 2;
    }
}
```

What prevents this code from compiling?

- A. The calculateSurfaceArea method within Cylinder must be declared default.
- B. Cylinder is not properly calling the Rectangle and Ellipse interfaces' calculateSurfaceArea methods.
- C. Cylinder requires an implementation of calculateSurfaceArea with two parameters.
- D. The calculateSurfaceArea method within Rectangle and Ellipse requires a public access modifier.

[\[All 1z0-819 Questions\]](#)

Given a Member class with fields for name and yearsMembership, including getters and setters and a print method, and a list of clubMembers members:

```
String testName = "smith";
int testMembershipLength = 5;
long matches = clubMembers
    .peek(new Consumer<Member>() {
        @Override
        public void accept(Member m) {
            m.print();
        }
    })
    .filter(m -> m.getYearsMembership() >= testMembershipLength)
    .map(m -> testName.compareToIgnoreCase(m))
    .filter(a -> a == 0)
    .count();
System.out.println(matches);
```

Which two Stream methods can be changed to use method references? (Choose two.)

- A. `.filter(Integer::equals(0))`
- B. `.map(testName::compareToIgnoreCase)`
- C. `.filter(Member::getYearsMembership() >= testMembershipLength)`
- D. `.peek(Member::print)`

Question #: 38

Topic #: 1

[\[All 1z0-819 Questions\]](#)

Given the code fragment:

```
public class Main {  
    private int count = 0; // line 1  
    public static void main(String[] args) { // line 2  
        Main test = new Main();  
        ExecutorService service = Executors.newFixedThreadPool(10);  
        for (int i = 0; i < 10; i++) {  
            service.submit(() -> {  
                for (int j = 0; j < 10000; j++) {  
                    test.count++; // line 3  
                }  
            });  
        }  
        service.shutdown();  
    }  
}
```

You must make the count variable thread safe.

Which two modifications meet your requirement? (Choose two.)

- A. replace line 2 with public static synchronized void main(String[] args) {
- B. replace line 1 with private volatile int count = 0;
- C. replace line 3 with

```
synchronized(test) {  
    test.count++;  
}
```
- D. replace line 1 with private AtomicInteger count = new AtomicInteger(0); and replace line 3 with test.count.incrementAndGet();
- E. replace line 3 with

```
synchronized(test.count) {  
    test.count++;  
}
```

}  
  
public class ExSub extends ExSuper {  
    public ExSub(int eCode, String msg, Throwable cause)  
    { super(eCode, msg, cause); }  
}
```

and the code fragment:

```
try {  
    String param1 = "Oracle";  
    if (param1.equalsIgnoreCase("oracle")) {  
        throw new ExSub(9001, "APPLICATION ERROR-9001", new FileNotFoundException ("MyFile.txt"));  
    }  
    throw new ExSuper(9001, new FileNotFoundException ("MyFile.txt")); // Line 1  
} catch (ExSuper ex) {  
    System.out.println(ex.getMessage());  
}
```

What is the result?

- A. 9001: java.io.FileNotFoundException: MyFile.txt-MyFile.txt
- B. 9001: APPLICATION ERROR-9001-MyFile.txt
- C. 9001: APPLICATION ERROR-9001-MyFile.txt
- D. Compilations fails at Line 1.

Which two interfaces are considered to be functional interfaces? (Choose two.)

A. @FunctionalInterface

```
interface InterfaceC {  
    public boolean equals(Object o);  
    int breed(int x);  
    int calculate(int x, int y);  
}
```

B. @FunctionalInterface

```
interface InterfaceD {  
    int breed(int x);  
}
```

C. @FunctionalInterface

```
interface InterfaceE {  
    public boolean equals(int i);  
    int breed(int x);  
}
```

D. interface InterfaceA {

```
int GERM = 13;  
public default int getGERM() { return GERM; }  
}
```

E. interface InterfaceB {

```
int GERM = 13;  
public default int getGERM() { return get(); }  
private int get() { return GERM; }  
public boolean equals(Object o);  
int breed(int x);  
}
```

Given:

```
public final class X {  
    private String name;  
    public String getName() {  
        return name;  
    }  
    public void setName(String name) {  
        this.name = name;  
    }  
    public String toString() { return getName(); }  
}
```

and

```
public class Y extends X{  
    public Y(String name) {  
        super();  
        setName(name);  
    }  
    public static void main (String... args) {  
        Y y = new Y("HH");  
        System.out.println(y);  
    }  
}
```

What is the result?

- A. null
- B. HH
- C. Y@<>
- D. The compilation fails

Question #: 57

Topic #: 1

[\[All 1z0-819 Questions\]](#)

Given:

```
public class Point {  
    @JsonField(type=JsonField.Type.STRING, name="name")  
    private String _name;  
  
    @JsonField(type=JsonField.Type.INT)  
    private int x;  
  
    @JsonField(type=JsonField.Type.INT)  
    private int y;  
}
```

What is the correct definition of the JsonField annotation that makes the Point class compile?

- A.

```
@Retention(RetentionPolicy.RUNTIME)  
@Target(ElementType.METHOD)  
@interface JsonField {  
    String name() default "";  
    enum Type {  
        INT, STRING, BOOLEAN  
    };  
    Type type();  
}
```
- B.

```
@Target(ElementType.TYPE)  
@interface JsonField {  
    String name() default "";  
    enum Type {  
        INT, STRING, BOOLEAN  
    };  
    Type type();  
}
```
- C.

```
@interface JsonField {  
    String name();  
    enum Type {  
        INT, STRING, BOOLEAN  
    };  
    Type type();  
}
```
- D.

```
@Target(ElementType.FIELD)  
@interface JsonField {  
    String name() default "";

Question #: 58

Topic #: 1

[\[All 1z0-819 Questions\]](#)

Given:

```
public class Test {
    public static void main(String[] args) {
        AnotherClass ac = new AnotherClass();
        SomeClass sc = new AnotherClass();
        ac = sc;
        sc.methodA();
        ac.methodA();
    }
}
class SomeClass {
    public void methodA() {
        System.out.println("SomeClass#methodA()");
    }
}
class AnotherClass extends SomeClass {
    public void methodA() {
        System.out.println("AnotherClass#methodA()");
    }
}
```

What is the result?

- A. AnotherClass#methodA()
SomeClass#methodA()
- B. A ClassCastException is thrown at runtime.
- C. The compilation fails.
- D. AnotherClass#methodA()
AnotherClass#methodA()
- E. SomeClass#methodA()
AnotherClass#methodA()
- F. SomeClass#methodA()
SomeClass#methodA()

Actual exam question from Oracle's 1z0-819

Question #: 59

Topic #: 1

[\[All 1z0-819 Questions\]](#)

Given:

```
public interface A {  
    public Iterable a();  
}  
public interface B extends A {  
    public Collection a();  
}  
public interface C extends A {  
    public Path a();  
}  
public interface D extends B, C {  
}
```

Why does D cause a compilation error?

- A. D does not define any method.
- B. D inherits a() only from C.
- C. D inherits a() from B and C but the return types are incompatible.
- D. D extends more than one interface.

[Show Suggested Answer](#)

Actual exam question from Oracle's 1z0-819

Question #: 60

Topic #: 1

[\[All 1z0-819 Questions\]](#)

Your organization provides a cloud server to your customer to run their Java code. You are reviewing the changes for the next release and you see this change in one of the config files:

```
old: JAVA_OPTS="$JAVA_OPTS -Xms8g -Xmx8g"  
new: JAVA_OPTS="$JAVA_OPTS -Xms8g -Xmx8g -noverify"
```

Which is correct?

- A. You accept the change because -noverify is necessary for your code to run with the latest version of Java.
- B. You reject the change because -Xms8g -Xmx8g uses too much system memory.
- C. You accept the change because -noverify is a standard option that has been supported since Java 1.0.
- D. You reject the change because -noverify is a critical security risk.

Question #: 61

Topic #: 1

[\[All 1z0-819 Questions\]](#)

Given:

```
public interface Worker {  
    public void doProcess();  
}
```

and

```
public class HardWorker implements Worker {  
    public void doProcess() {  
        System.out.println("doing things");  
    }  
}
```

and

```
public class Cheater implements Worker {  
    public void doProcess() {}  
}
```

and

```
public class Main <T extends Worker> extends Thread { // Line 1  
    private List<T> processes = new ArrayList<>(); // Line 2  
    public void addProcess(HardWorker w) { // Line 3  
        processes.add(w);  
    }  
    public void run() {  
        processes.forEach(p -> p.doProcess());  
    }  
}
```

What needs to change to make these classes compile and still handle all types of Interface Worker?

- A. Replace Line 3 with public void addProcess (Worker w) {.
- B. Replace Line 1 with public class Main extends Thread {.
- C. Replace Line 2 with private List processes = new ArrayList<>();.
- D. Replace Line 3 with public void addProcess(T w) {.

[\[All 1z0-819 Questions\]](#)

Given:

```
interface AbilityA {  
    default void action() {  
        System.out.println("a action");  
    }  
}
```

and

```
interface AbilityB {  
    void action();  
}
```

and

```
public class Test implements AbilityA, AbilityB { // line 1  
    public void action() {  
        System.out.println("ab action");  
    }  
    public static void main(String[] args) {  
        AbilityB x = new Test(); // line 2  
        x.action();  
    }  
}
```

What is the result?

- A. The compilation fails on line 2.
- B. ab action
- C. An exception is thrown at run time.
- D. a action
- E. The compilation fails on line 1.

A company has an existing Java app that includes two Java 8 jar files, sales-8.10.jar and clients-10.2.jar.

The jar file, sales-8.10.jar, references packages in clients-10.2.jar, but clients-10.2.jar does not reference packages in sales-8.10.jar.

They have decided to modularize clients-10.2. jar.

Which module-info.java file would work for the new library version clients-10.3.jar?

- A. module com.company.clients{
 requires com.company.clients;
}
- B. module com.company.clients{
 uses com.company.clients;
}
- C. module com.company.clients {
 exports com.company.clients.Client;
}
- D. module com.company.clients {
 exports com.company.clients;
}

        System.out.println(name);  
    }  
}
```

Which statement is true?

- A. The memory allocated for Jack object can be reused in line 2.
- B. The memory allocated for Jane object can be reused in line 1.
- C. The memory allocated for Jane object can be reused in line 2.
- D. The memory allocated for John object can be reused in line 1.

[Show Suggested Answer](#)

Actual exam question from Oracle's 1z0-819

Question #: 90

Topic #: 1

[\[All 1z0-819 Questions\]](#)

Given:

```
public class X {  
    protected void print(Object obj) {  
        System.out.println(obj);  
    }  
    public final void print(Object... objects) {  
        for(Object object : objects) {  
            print(object);  
        }  
    }  
    public void print(Collection collection) {  
        collection.forEach(System.out::println);  
    }  
}
```

and

```
public class Y extends X {  
    public void print(Object obj) {  
        System.out.print("[" + obj + "]");  
    }  
    public void print(Object... objects) {  
        for(Object object : objects) {  
            System.out.println("[" + object + "]");  
        }  
    }  
    public void print(Collection collection) {  
        print(collection.toArray());  
    }  
}
```

Why does this compilation fail?

- A. The method X.print (object) is not accessible to Y.
- B. The method Y.print (Object) does not call the method super.print (Object).
- C. In method X.print (Collection), System.out::println is an invalid Java identifier.
- D. The method Y.print (Object...) cannot override the final method X.print (Object...).
- E. The method print (Object) and the method print (Object...) are duplicates of each other.

Question #: 104

Topic #: 1

[\[All 1z0-819 Questions\]](#)

Given:

Automobile.java -

```
public abstract class Automobile { //line 1
    abstract void wheels();
}
```

Car.java -

```
public class Car extends Automobile {
    // line 2
    void wheels(int i) { // line 3
        System.out.print(4);
    }
    public static void main(String[] args) {
        Automobile ob = new Car(); // line 4
        ob.wheels();
    }
}
```

What must you do so that the code prints 4?

- A. Remove the parameter from wheels method in line 3.
- B. Remove abstract keyword in line 1.
- C. Replace the code in line 2 with Car ob = new Car();
- D. Add @Override annotation at line 2.

Given:

```
class Separators {  
    public static String separator = "/";  
    public static String pathSeparator = ":";  
}
```

To secure this code, you want to make sure that the client code cannot modify the public static fields.

Which code will accomplish this?

- A.

```
abstract class Separators {  
    public static String separator = "/";  
    public static String pathSeparator = ":";  
}
```
- B.

```
enum Separators {  
    separator,  
    pathSeparator  
}
```
- C.

```
interface Separators {  
    String separator = "/";  
    String pathSeparator = ":";  
}
```
- D.

```
class Separators {  
    private static String separator = "/";

Question #: 111

Topic #: 1

[\[All 1z0-819 Questions\]](#)

Given:

```
package pac;
public class Hello{
    public static void main(String[] args) {
        Module module = Hello.class.getModule();
        System.out.println("Module: " + module);
        System.out.println("Name: " + module.getName());
        System.out.println("Descriptor: " + module.getDescriptor());
    }
}
```

Given the directory structure:

```
\Test
| Hello.java
```

Given the commands to execute at the Test directory prompt:

```
Test>javac -d pac Hello.java
Test>java -cp pac pac.Hello
```

Which statement is true?

- A. Create an empty module-info.java file in the Test directory and on execution of the given commands, the program prints:

```
Module: unnamed module @<</font><</font>hash code>>
Name: null
Descriptor: module-info
```

- B. On execution of the given commands, the program prints:

```
Module: pac.Hello @<</font><</font>hash code>>
Name: unnamed
Descriptor: null
```

- C. Execute java --module-path pac pac.Hello instead of java -cp pac pac.Hello and on execution the program prints:

```
Module: pac @<</font><</font>hash code>>
Name: pac.Test
Descriptor: null
```

- D. On execution of the given commands, the program prints:

```
Module: unnamed module @<</font><</font>hash code>>
Name: null
Descriptor: null
```

Topic #: 1

[\[All 1z0-819 Questions\]](#)

---

Given these declarations:

```
String eName = "SMITH";
String empId = "42";
```

and these two code fragments:

Fragment 1:

```
Statement stmt = conn.createStatement();
String sql = "INSERT INTO EMP VALUES ('" + eName + "', '" + empId + "')";
stmt.executeUpdate(sql);
```

Fragment 2:

```
String sql = "INSERT INTO EMP VALUES (?, ?)";
PreparedStatement pstmt = conn.prepareStatement(sql);
pstmt.setObject(1, eName, JDBCType.VARCHAR);
pstmt.setObject(2, empId, JDBCType.VARCHAR);
pstmt.executeUpdate();
```

Which code fragment is preferred and why?

- A. Fragment 1 because it is shorter.
- B. Fragment 2 because it prevents SQL injection.
- C. Fragment 2 because it explicitly specifies the SQL types of the column values.
- D. Fragment 1 because it is more performant.

Given the data of the EMP table:

| ID  | NAME   | DEPT |
|-----|--------|------|
| 101 | SMITH  | HR   |
| 102 | JONES  | ENG  |
| 103 | WEAVER | HR   |

Assuming that jdbcURL, username, and password are declared and initialised.

```
try (Connection conn = DriverManager.getConnection(jdbcURL, username, password);
 PreparedStatement query = conn.prepareStatement("SELECT ID, NAME FROM EMP WHERE DEPT =
?");
 PreparedStatement update = conn.prepareStatement("INSERT INTO RECRUITING (ID, NAME)
VALUES (?, ?)")) {
 query.setString(1, "HR");
 ResultSet rs = query.executeQuery();
 while (rs.next()) {
 update.setObject(1, rs.getObject(1, Integer.class), JDBCType.INTEGER);
 update.setObject(2, rs.getObject(2, String.class), JDBCType.VARCHAR);
 update.execute();
 }
}
```

Which two happen upon execution? (Choose two.)

- A. Three SQL statements are executed.
- B. Two PreparedStatement objects are created.
- C. Two SQL statements are executed.
- D. Memory leaks because Connection, PreparedStatements, and ResultSet are not closed.
- E. Three PreparedStatement objects are created.
- F. A SQLException is thrown because the ResultSet is not closed.

}
```

and

```
package a;
public class B extends A {
 protected void print() {
 System.out.print("Derived class");
 }
 public static void main(String args[]){
 B b = new B();
 ((A)b).print();
 }
}
```

What is the output?

- A. Base class
- B. The compilation fails.
- C. Derived class
- D. An exception is thrown at runtime.

Given:

```
1. List fruits = List.of("banana", "orange", "apple", "lemon");
2. fruits.sort(new Comparator() {
 @Override
 public int compare(String m, String n) {
 return n.compareTo(m);
 }
});
```

Which statement will refactor line 2 to use a lambda expression?

- A. fruits.sort((String d, String e) -> (e.compareTo(d)));
- B. fruits.sort( o, p -> p.compareTo(o));
- C. fruits.sort((String x, y) -> (return y.compareTo(x)));
- D. fruits.sort((a, b) -> (return b.compareTo(a)));

Given:

```
public class Tester {
 public static void main(String[] args) {
 float x = 2, y = 4, z = 4;
 float a = y / x, b = y / z;
 if (a > b) {
 System.out.println(a + b);
 }
 }
}
```

What is the result?

- A. 3.0
- B. The program prints nothing
- C. 2.0
- D. 1.0
- E. An exception is thrown at runtime

Question #: 139

Topic #: 1

[\[All 1z0-819 Questions\]](#)

Given the code fragment:

```
StringBuilder txt1 = new StringBuilder("PPQRRRSTT");
int i = 0;
a:
while (i < txt1.length()) {
 char x = txt1.charAt(i);
 int j = 0;
 i++;
 b:
 while (j < txt1.length()) {
 char y = txt1.charAt(j);
 if (i != j && y == x) {
 txt1.deleteCharAt(j);
 // line 1
 }
 j++;
 }
}
System.out.println(txt1);
```

Which two statements inserted independently at line 1 enable this code to print PRRT? (Choose two.)

- A. j--;
- B. break a;
- C. continue a;
- D. continue b;
- E. break b;
- F. i--;

Topic #: 1

[\[All 1z0-819 Questions\]](#)

---

Given the code fragment:

```
9. Integer[] ints = {1,2,3,4,5,6,7};
10. var list = Arrays.asList(ints);
11. UnaryOperator<Integer> uo = x -> x * 3;
12. list.replaceAll(uo);
```

Which can replace line 11?

- A. UnaryOperator uo = (var x) -> (x \* 3);
- B. UnaryOperator uo = (int x) -> x \* 3;
- C. UnaryOperator uo = var x -> ( return x \* 3; );
- D. UnaryOperator uo = x -> ( return x \* 3);

Actual exam question from Oracle's 1z0-819

Question #: 141

Topic #: 1

[\[All 1z0-819 Questions\]](#)

---

Given:

```
package p1;
import java.util.*;
abstract class X {
 protected final List items;
 protected X(List items) {
 this.items = items;
 }
 protected abstract void doProcess();
 public void removeItem(String item) {
 items.remove(item);
 }
}
```

and

```
package p2;
import p1.X;
import java.util.*;

public class Y extends X {
 public Y() {
 super(new ArrayList());
 }
 public void doProcess() {
 items.forEach(System.out::println);
 }
 public void removeItem(String item) {
 super.removeItem(item);
 }
}
```

- A. The class X is not accessible in p2.
- B. The constructor X(List) has lesser visibility rights than the constructor Y(List).
- C. The method X.removeItem(String item) cannot be overridden by Y.removeItem(String item).
- D. The method Y.doProcess() has higher visibility rights than the abstract method X.doProcess().
- E. The constructor X(List) does not match the Y() constructor.
