Topic #: 1

[All 2V0-21.19D Questions]

An administrator has an environment with these conditions and requirements:

☞ The host provides 6GHz of CPU and 32GB of memory

☞ The host is shared between the Marketing and QA departments

☞ The QA department needs a higher compute resource priority

How can the administrator meet the conditions and requirements?

A. Adjust NIOC or SIOC as appropriate to give the QA department a higher compute priority within the cluster.

B. Create a resource pool for each department and use the Shares attribute to prioritize the allocation of resource.

C. Assign affinity or anti-affinity rules to the appropriate VMs for each department.

D. Set the VM priority to high for QA department VMs and normal for Marketing department VMs.

Show Suggested Answer

[All 2V0-21.19D Questions]

A vSphere administrator creates a VM with 2 vCPUs and 4GB memory. A 3GB memory reservation is applied to the VM. What size is .vswp file when the VM is powered on?

A. 1GB

B. 2GB

C. 3GB

D. 4GB

Show Suggested Answer

Actual exam question from VMware's 2V0-21.19D

Question #: 17

Topic #: 1

[All 2V0-21.19D Questions]

An administrator suspects poor VM performance. The administrator runs esxtop and sees the following output from the CPU and memory screens:

6:48:19pm up 4:22, 528 worlds, 8 VMs, 16 vCPUs, CPU load average: 0.26, 0.36, 0.16

VMKMEM/MB: 8151 managed: 407 minfree, 3055 rsvd, 5095 ursvd, high state

What can the administrator conclude from this output?

    A. The host has too many worlds running.

    B. The host is ballooning.

    C. The host has adequate memory.

    D. The host is under CPU pressure.

Question #: 26

Topic #: 1

[All 2V0-21.19D Questions]

A VSS is configured with two uplinks and assigned a load balancing policy route based on a virtual port ID.

What are two potential disadvantages of this configuration? (Choose two.)

A. A VM with a single MAC address is limited to the speed of the uplink associated with the relevant port ID.

B. Higher resource consumption compared to other load balancing algorithms will occur.

C. The virtual switch is unaware of uplink load and uplinks might become overloaded.

D. The NIC with less load is more likely to be chosen if port IDs match.

E. ESXi will use NIOC to attempt to mitigate network congestion when an uplink becomes saturated.

Topic #: 1

[All 2V0-21.19D Questions]

An administrator is concerned about the amount of time the IT team takes to create multiple VLANs in a very dynamic vSphere environment. The environment has these parameters:

☞ All virtual networking utilizes vSphere Standard Switches with uplinks to a Cisco Infrastructure

☞ Activities require 5-10 VLANs being created or removed every couple of days

☞ The IT team has three members

How can the administrator centralize the virtual networking configuration so the IT team utilizes time more efficiently?

    A. Deploy a vRealize Orchestrator (vRO) appliance.

    B. Create and use a vSphere Distributed Switch (VDS).

    C. Enable and configure Storage I/O Control (SIOC).

    D. Enable and configure vSphere Network I/O Control (NIOC).
