Question #: 4

Topic #: 1

[All ACCESS-DEF Questions]

A user's account information required for multi-factor authentication is not set up properly and is preventing the user from logging in.

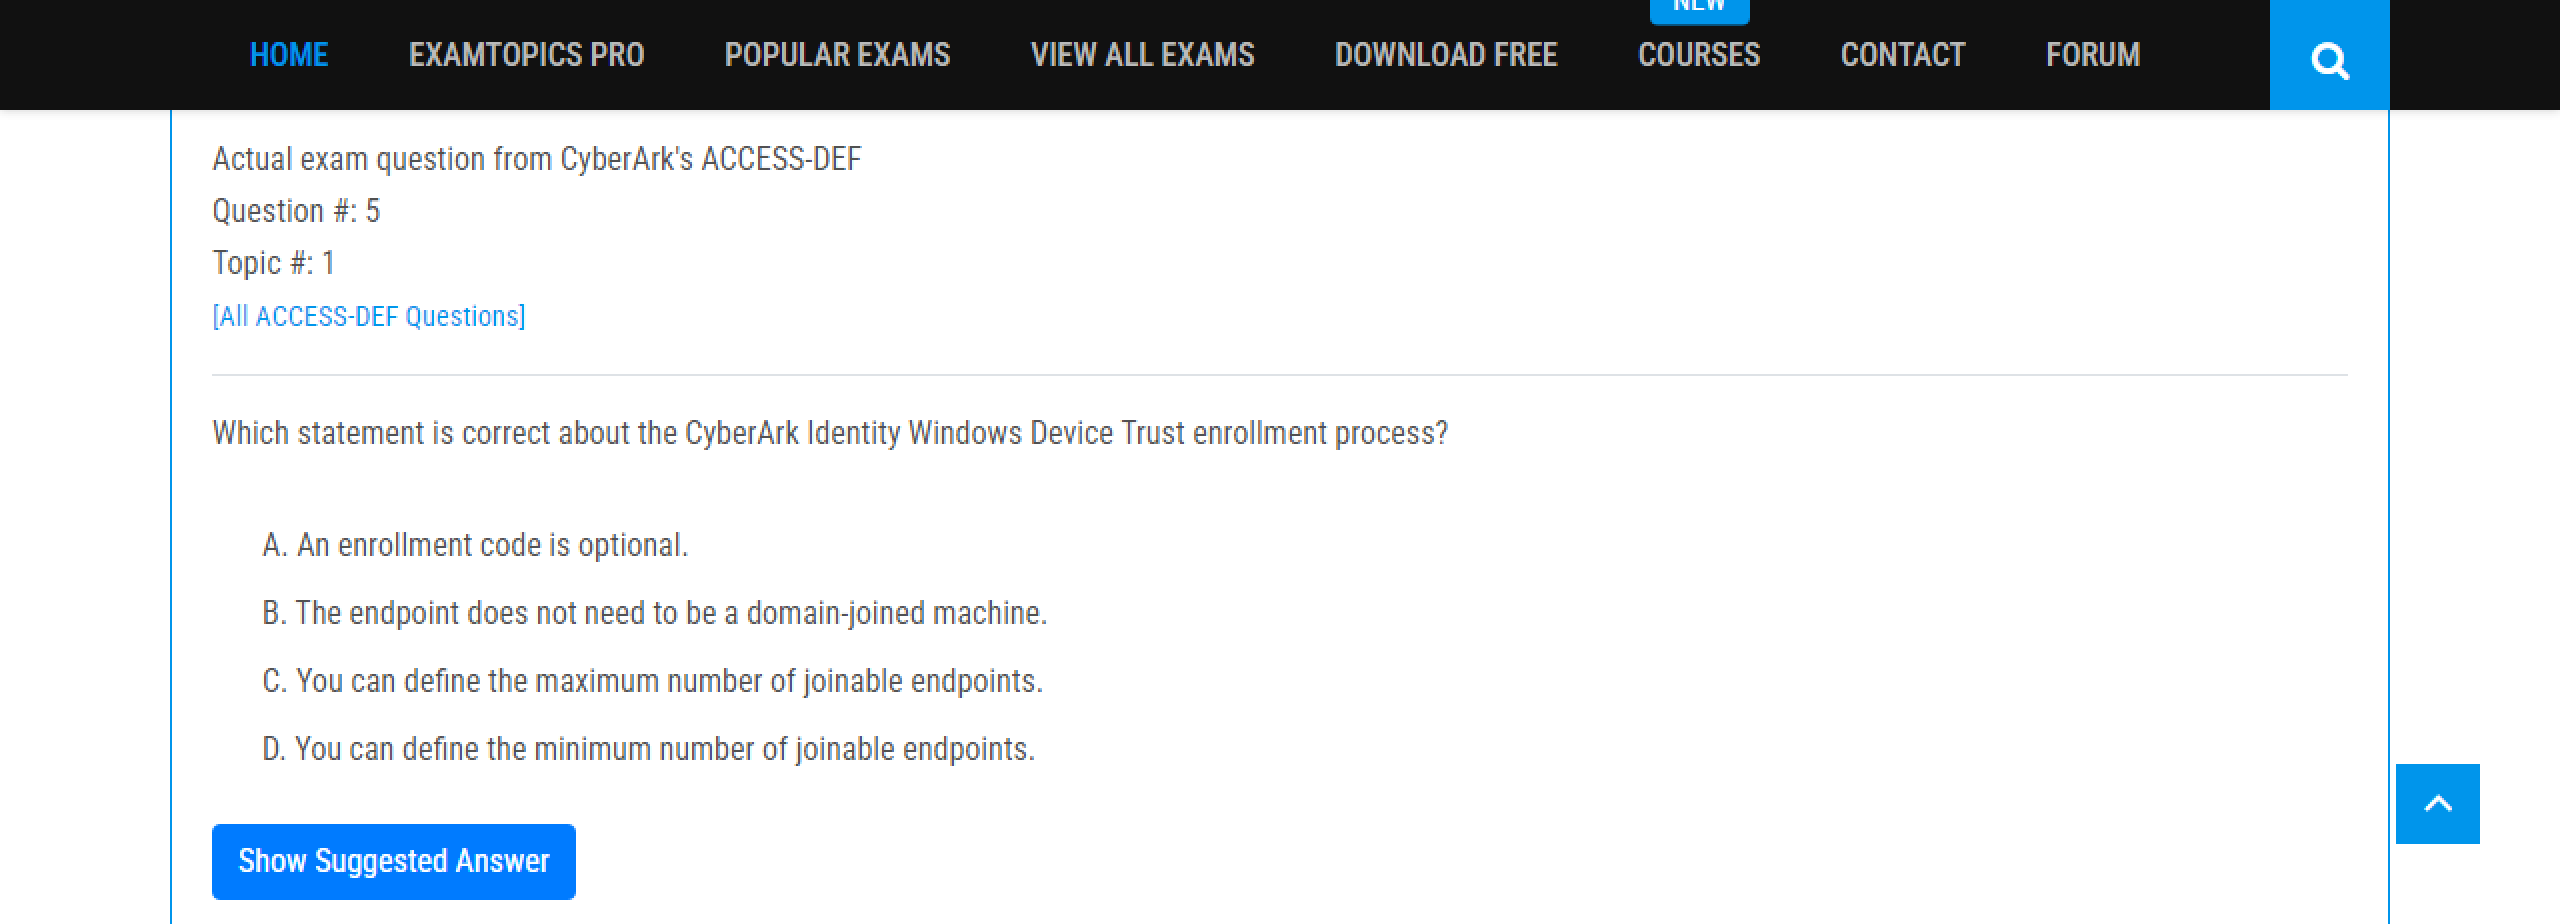
What should you do?

A. Use the MFA Unlock command in the Admin Portal to suspend multifactor authentication for 10 minutes.

B. Delete the user's account and create a new one.

C. Ask the user to delete all browser cookies, then try again.

D. Change the user's directory source from Active Directory to LDAP for authentication.



Actual exam question from CyberArk's ACCESS-DEF

Question #: 5

Topic #: 1

[All ACCESS-DEF Questions]

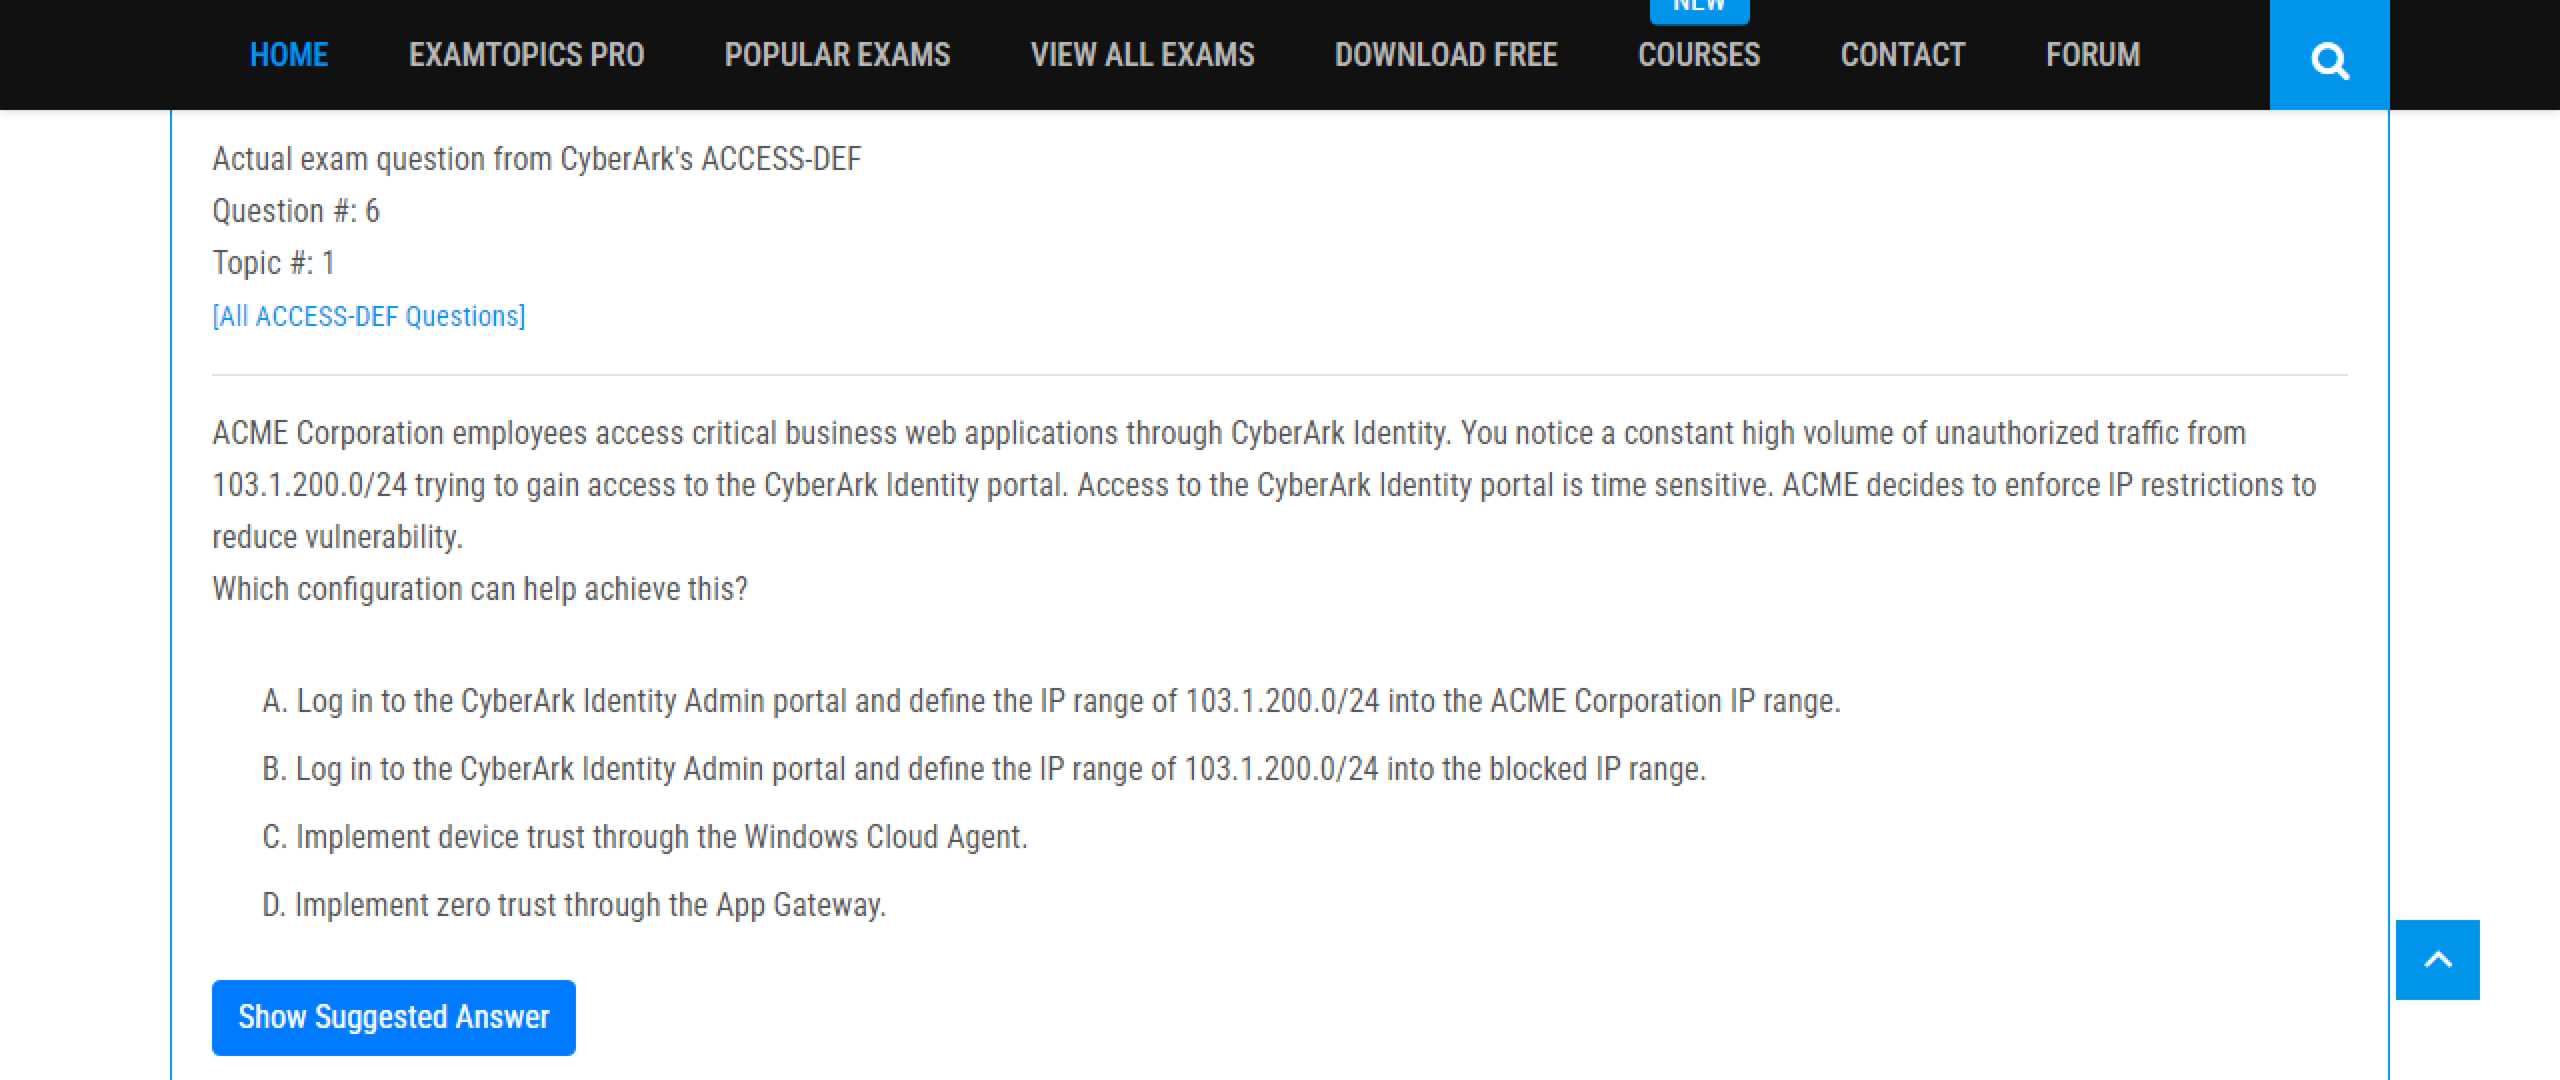
Which statement is correct about the CyberArk Identity Windows Device Trust enrollment process?

A. An enrollment code is optional.

B. The endpoint does not need to be a domain-joined machine.

C. You can define the maximum number of joinable endpoints.

D. You can define the minimum number of joinable endpoints.



Actual exam question from CyberArk's ACCESS-DEF

Question #: 6

Topic #: 1

[All ACCESS-DEF Questions]

ACME Corporation employees access critical business web applications through CyberArk Identity. You notice a constant high volume of unauthorized traffic from 103.1.200.0/24 trying to gain access to the CyberArk Identity portal. Access to the CyberArk Identity portal is time sensitive. ACME decides to enforce IP restrictions to reduce vulnerability.

Which configuration can help achieve this?

A. Log in to the CyberArk Identity Admin portal and define the IP range of 103.1.200.0/24 into the ACME Corporation IP range.

B. Log in to the CyberArk Identity Admin portal and define the IP range of 103.1.200.0/24 into the blocked IP range.

C. Implement device trust through the Windows Cloud Agent.

D. Implement zero trust through the App Gateway.

Actual exam question from CyberArk's ACCESS-DEF

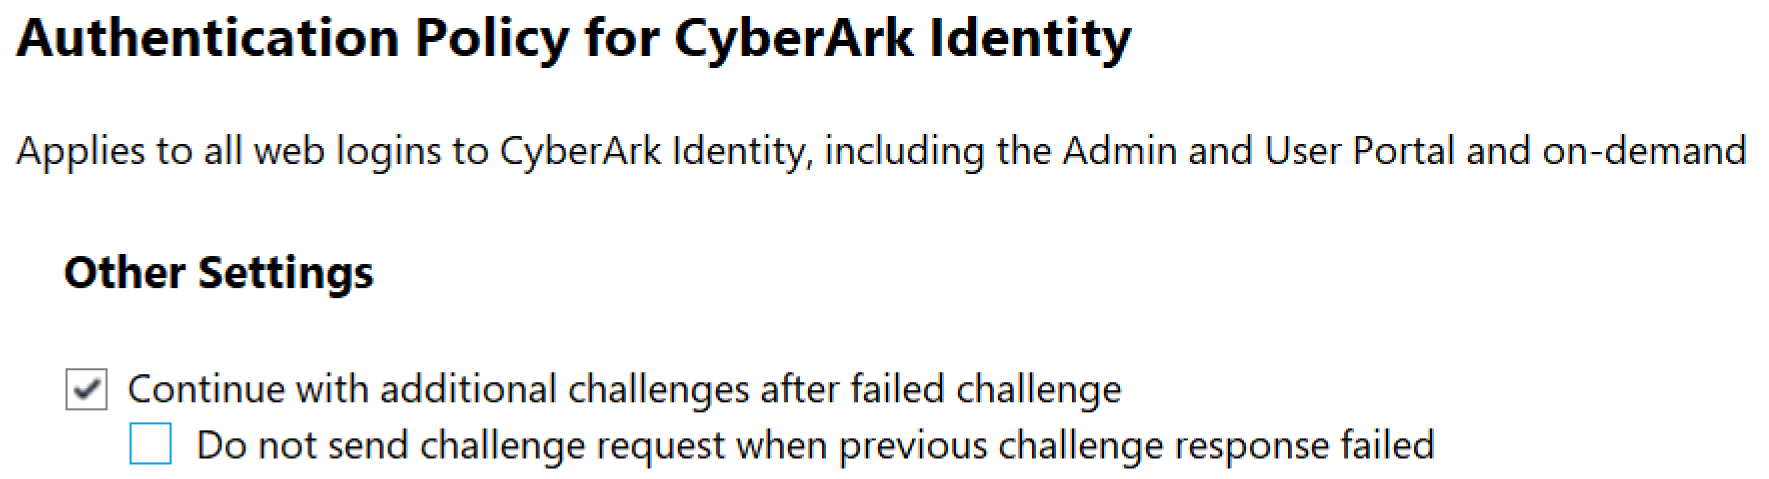
Question #: 7

Topic #: 1

[All ACCESS-DEF Questions]

Refer to the exhibit.

Which statements are correct regarding this Authentication Policy? (Choose two.)



Authentication Policy for CyberArk Identity

Applies to all web logins to CyberArk Identity, including the Admin and User Portal and on-demand

Other Settings

☑ Continue with additional challenges after failed challenge

☐ Do not send challenge request when previous challenge response failed

A. Users will still be asked for their MFA even if they mistyped their username.

B. If users have set up CyberArk Mobile Authenticator as an MFA, they will still receive the Push Notification to confirm the request even if they mistyped their password.

C. Users will not be notified which challenge they failed if their login attempt failed.

D. If users have set up a Security Question as an MFA, the Security Question will not be displayed to the user to answer even if they mistyped their password.

E. If the first factor is password and the user is an Active Directory user and the Active Directory is unavailable, this setting does not matter because the user will not be able to authenticate through Active Directory credentials and will see the message "Active Directory not available".

[All ACCESS-DEF Questions]

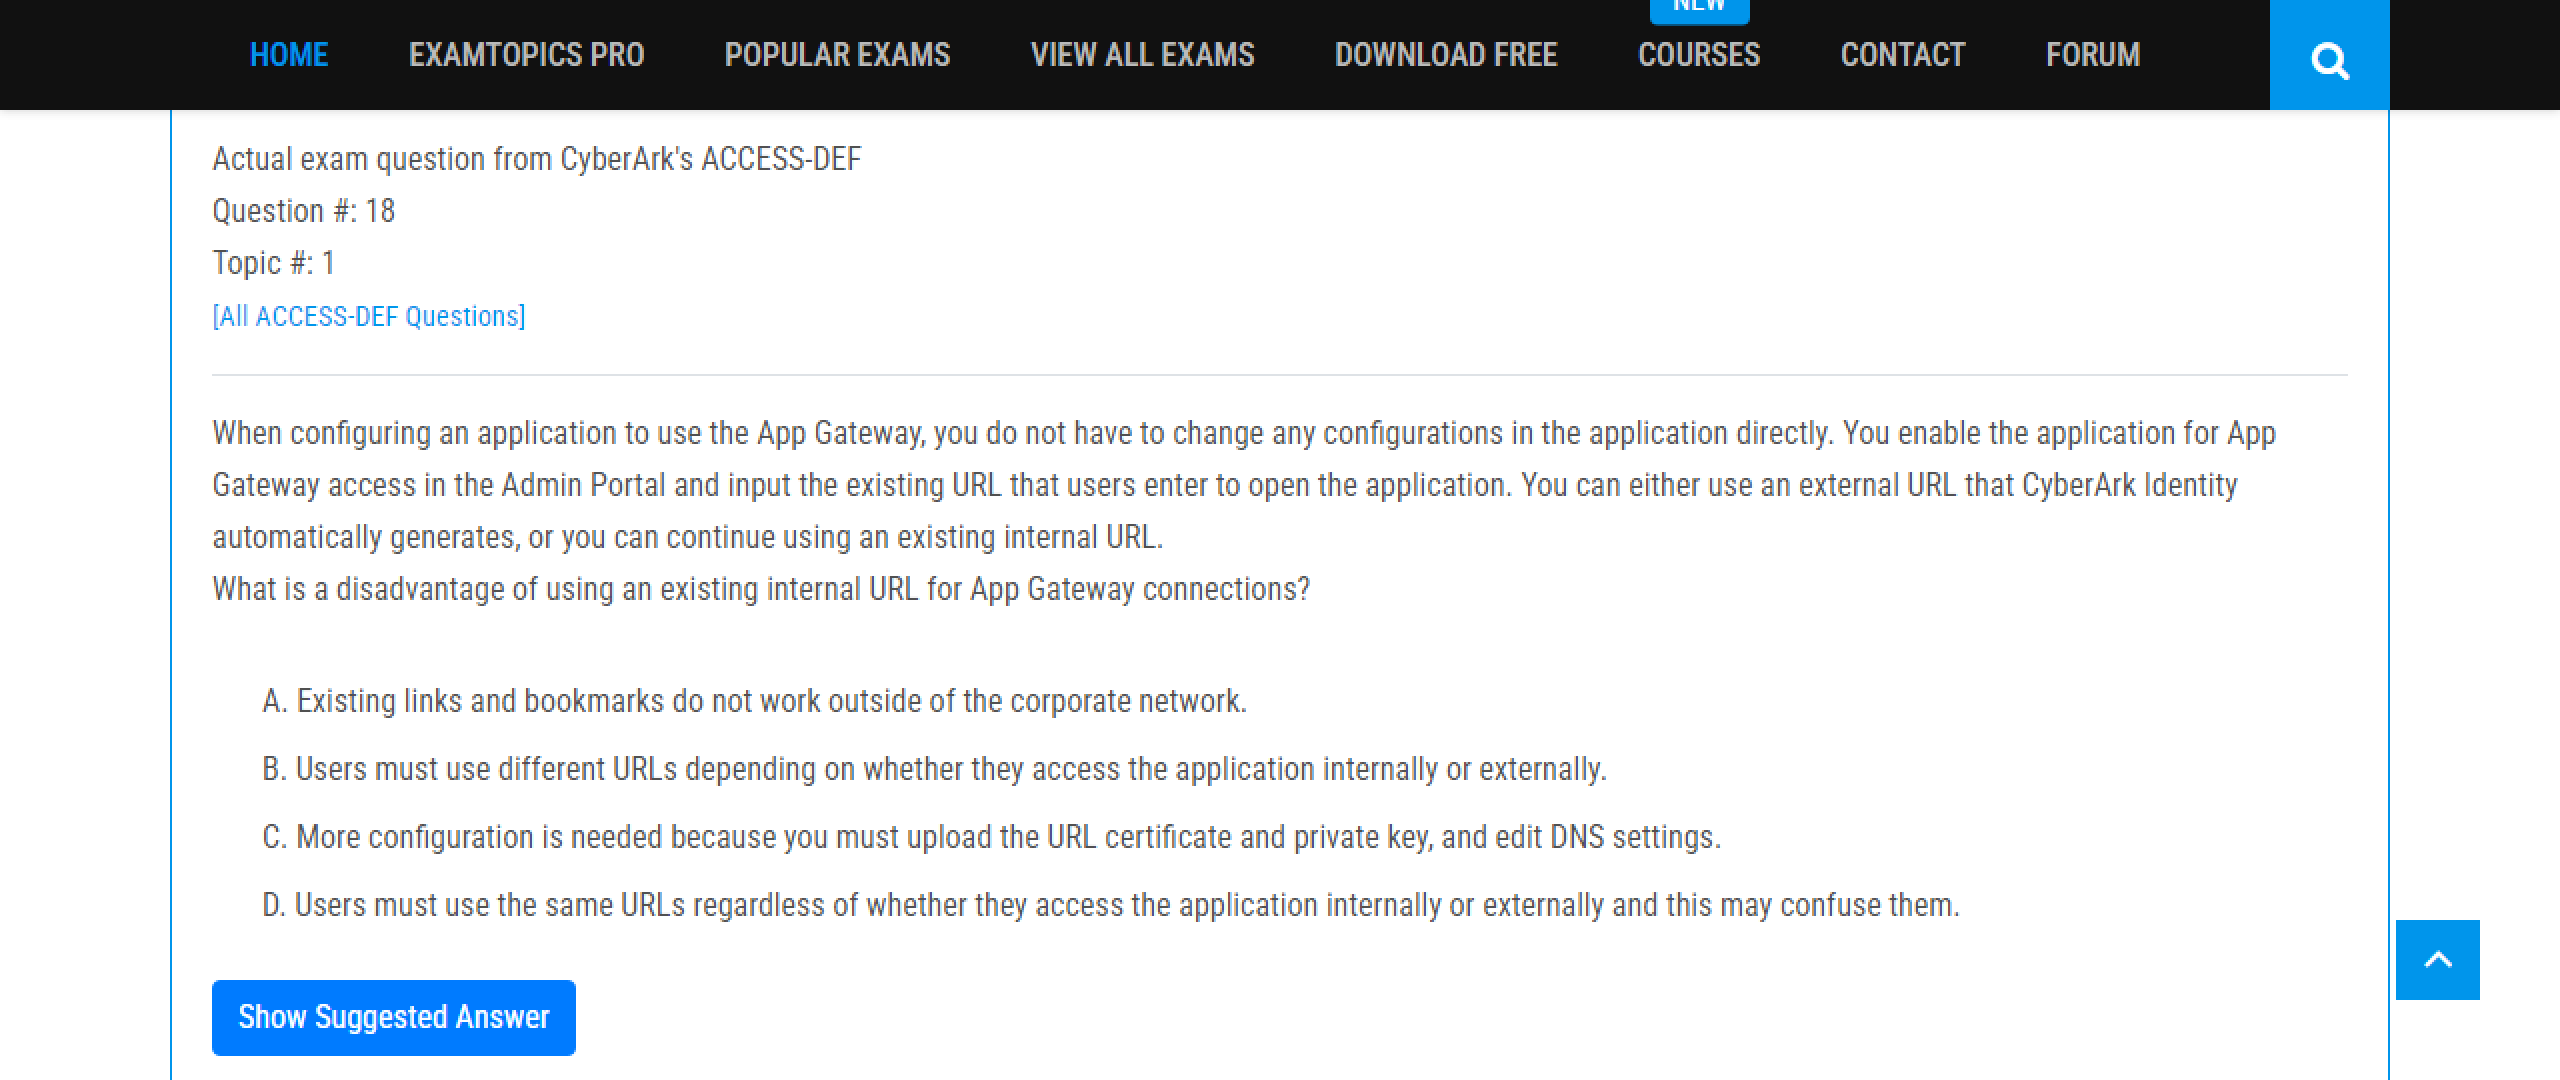
Which predefined roles does CyberArk Identity provide?

A. System Administrator and Everybody

B. Manage Users and Everybody

C. System Administrator and Business Users

D. Manage Users and Business Users



Actual exam question from CyberArk's ACCESS-DEF

Question #: 18

Topic #: 1

[All ACCESS-DEF Questions]

When configuring an application to use the App Gateway, you do not have to change any configurations in the application directly. You enable the application for App Gateway access in the Admin Portal and input the existing URL that users enter to open the application. You can either use an external URL that CyberArk Identity automatically generates, or you can continue using an existing internal URL.

What is a disadvantage of using an existing internal URL for App Gateway connections?

A. Existing links and bookmarks do not work outside of the corporate network.

B. Users must use different URLs depending on whether they access the application internally or externally.

C. More configuration is needed because you must upload the URL certificate and private key, and edit DNS settings.

D. Users must use the same URLs regardless of whether they access the application internally or externally and this may confuse them.

[All ACCESS-DEF Questions]

Which 2FA/MFA options can fulfill the "Something you are" requirement? (Choose two.)

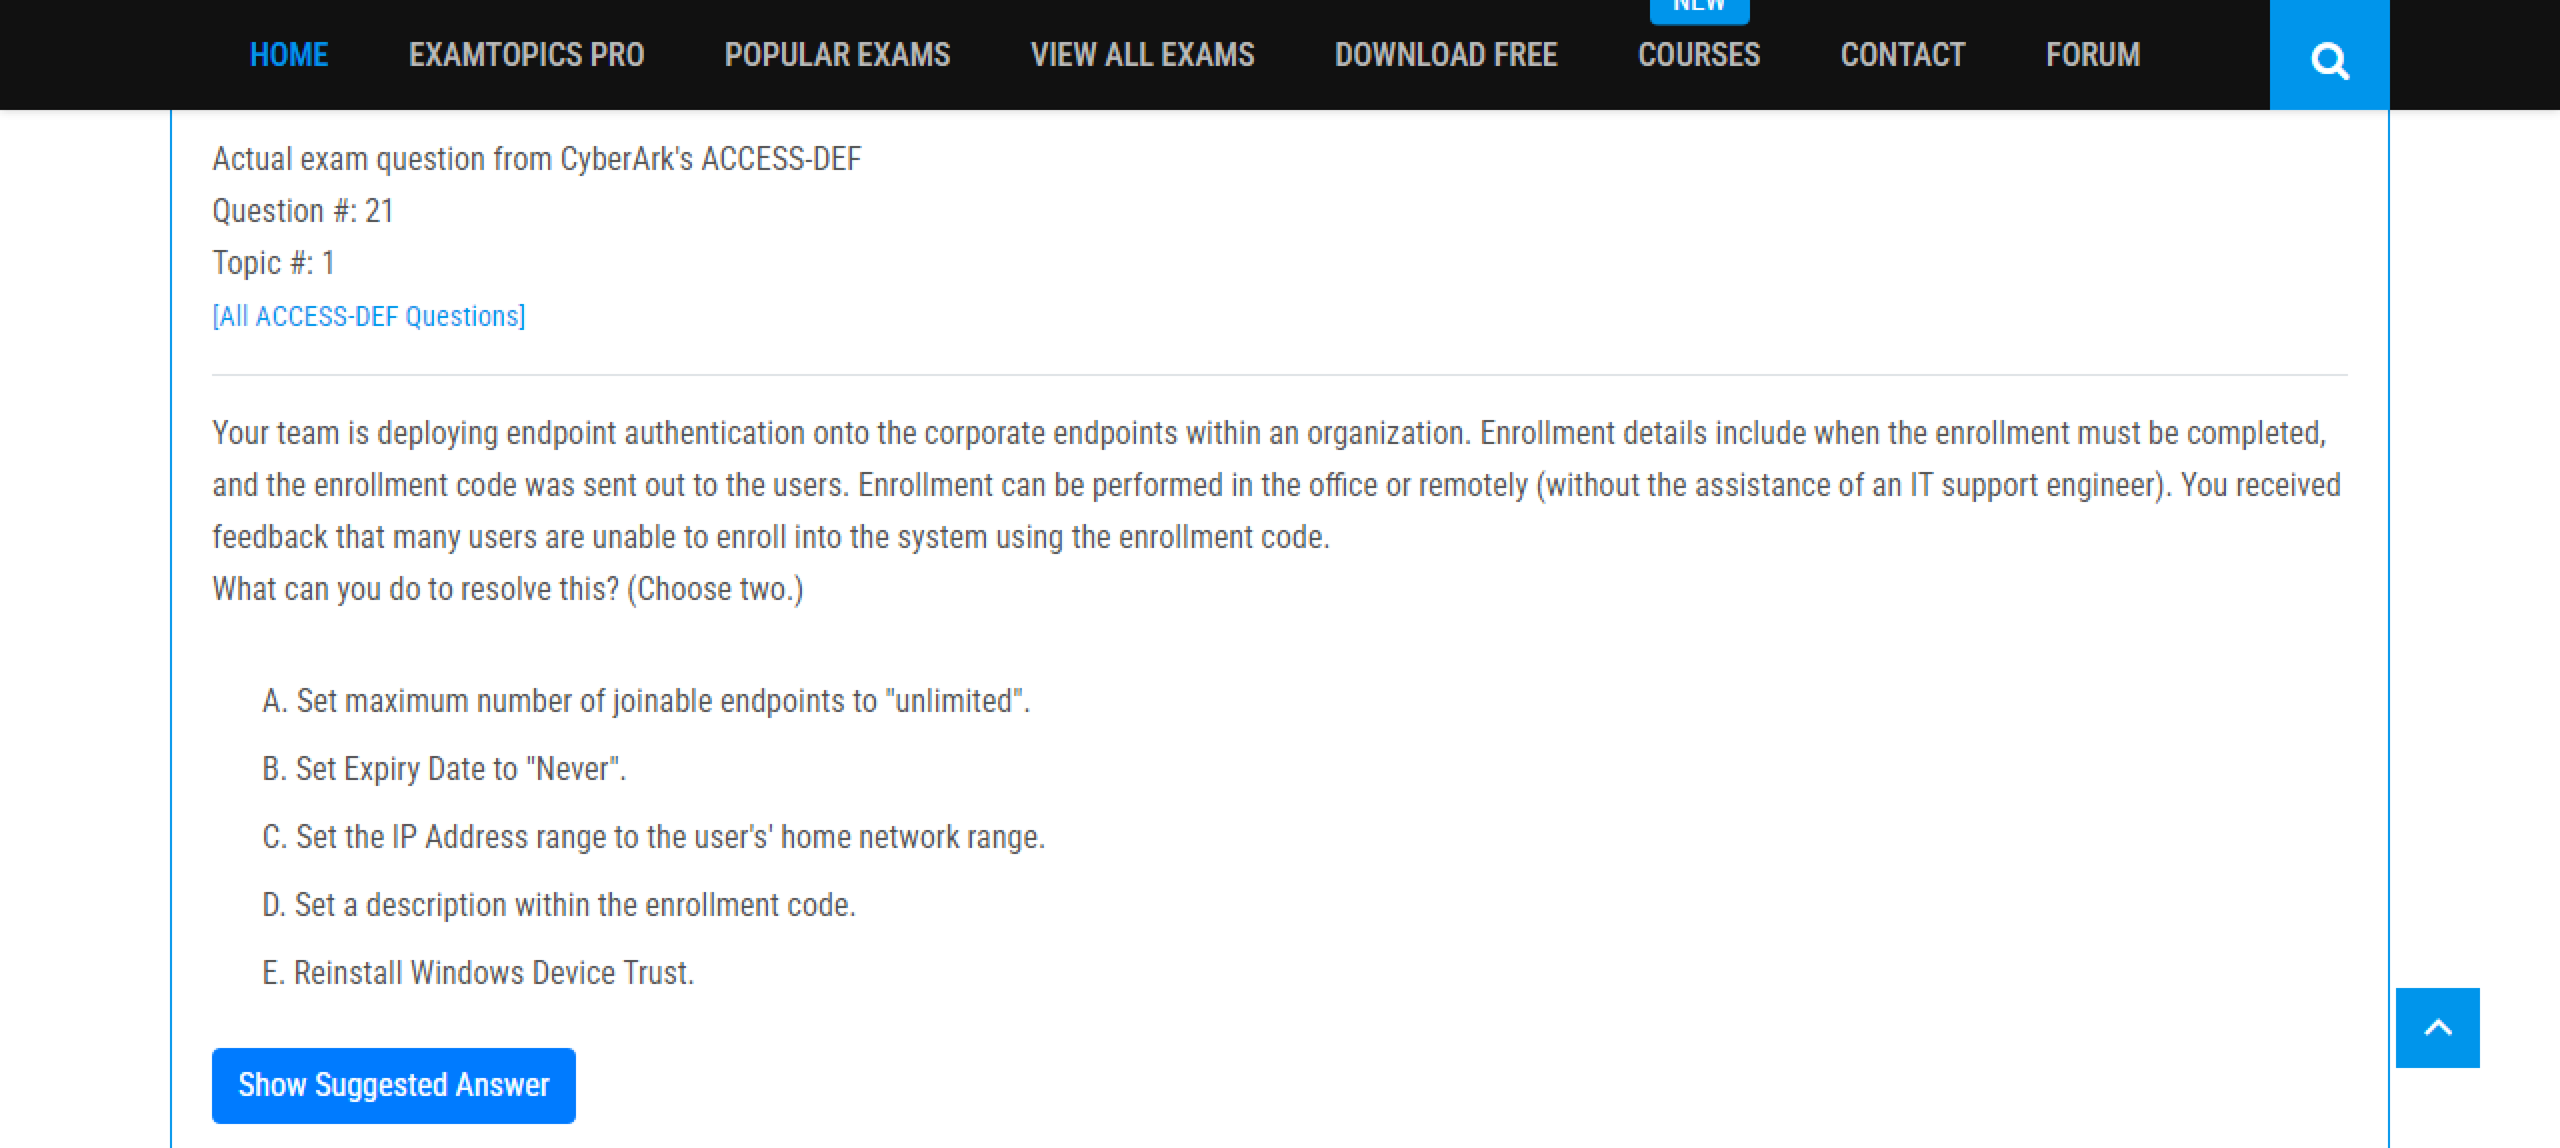
A. email

B. CyberArk Identity mobile app

C. FIDO2

D. phone call

E. security questions



Actual exam question from CyberArk's ACCESS-DEF

Question #: 21

Topic #: 1

[All ACCESS-DEF Questions]

Your team is deploying endpoint authentication onto the corporate endpoints within an organization. Enrollment details include when the enrollment must be completed, and the enrollment code was sent out to the users. Enrollment can be performed in the office or remotely (without the assistance of an IT support engineer). You received feedback that many users are unable to enroll into the system using the enrollment code.

What can you do to resolve this? (Choose two.)

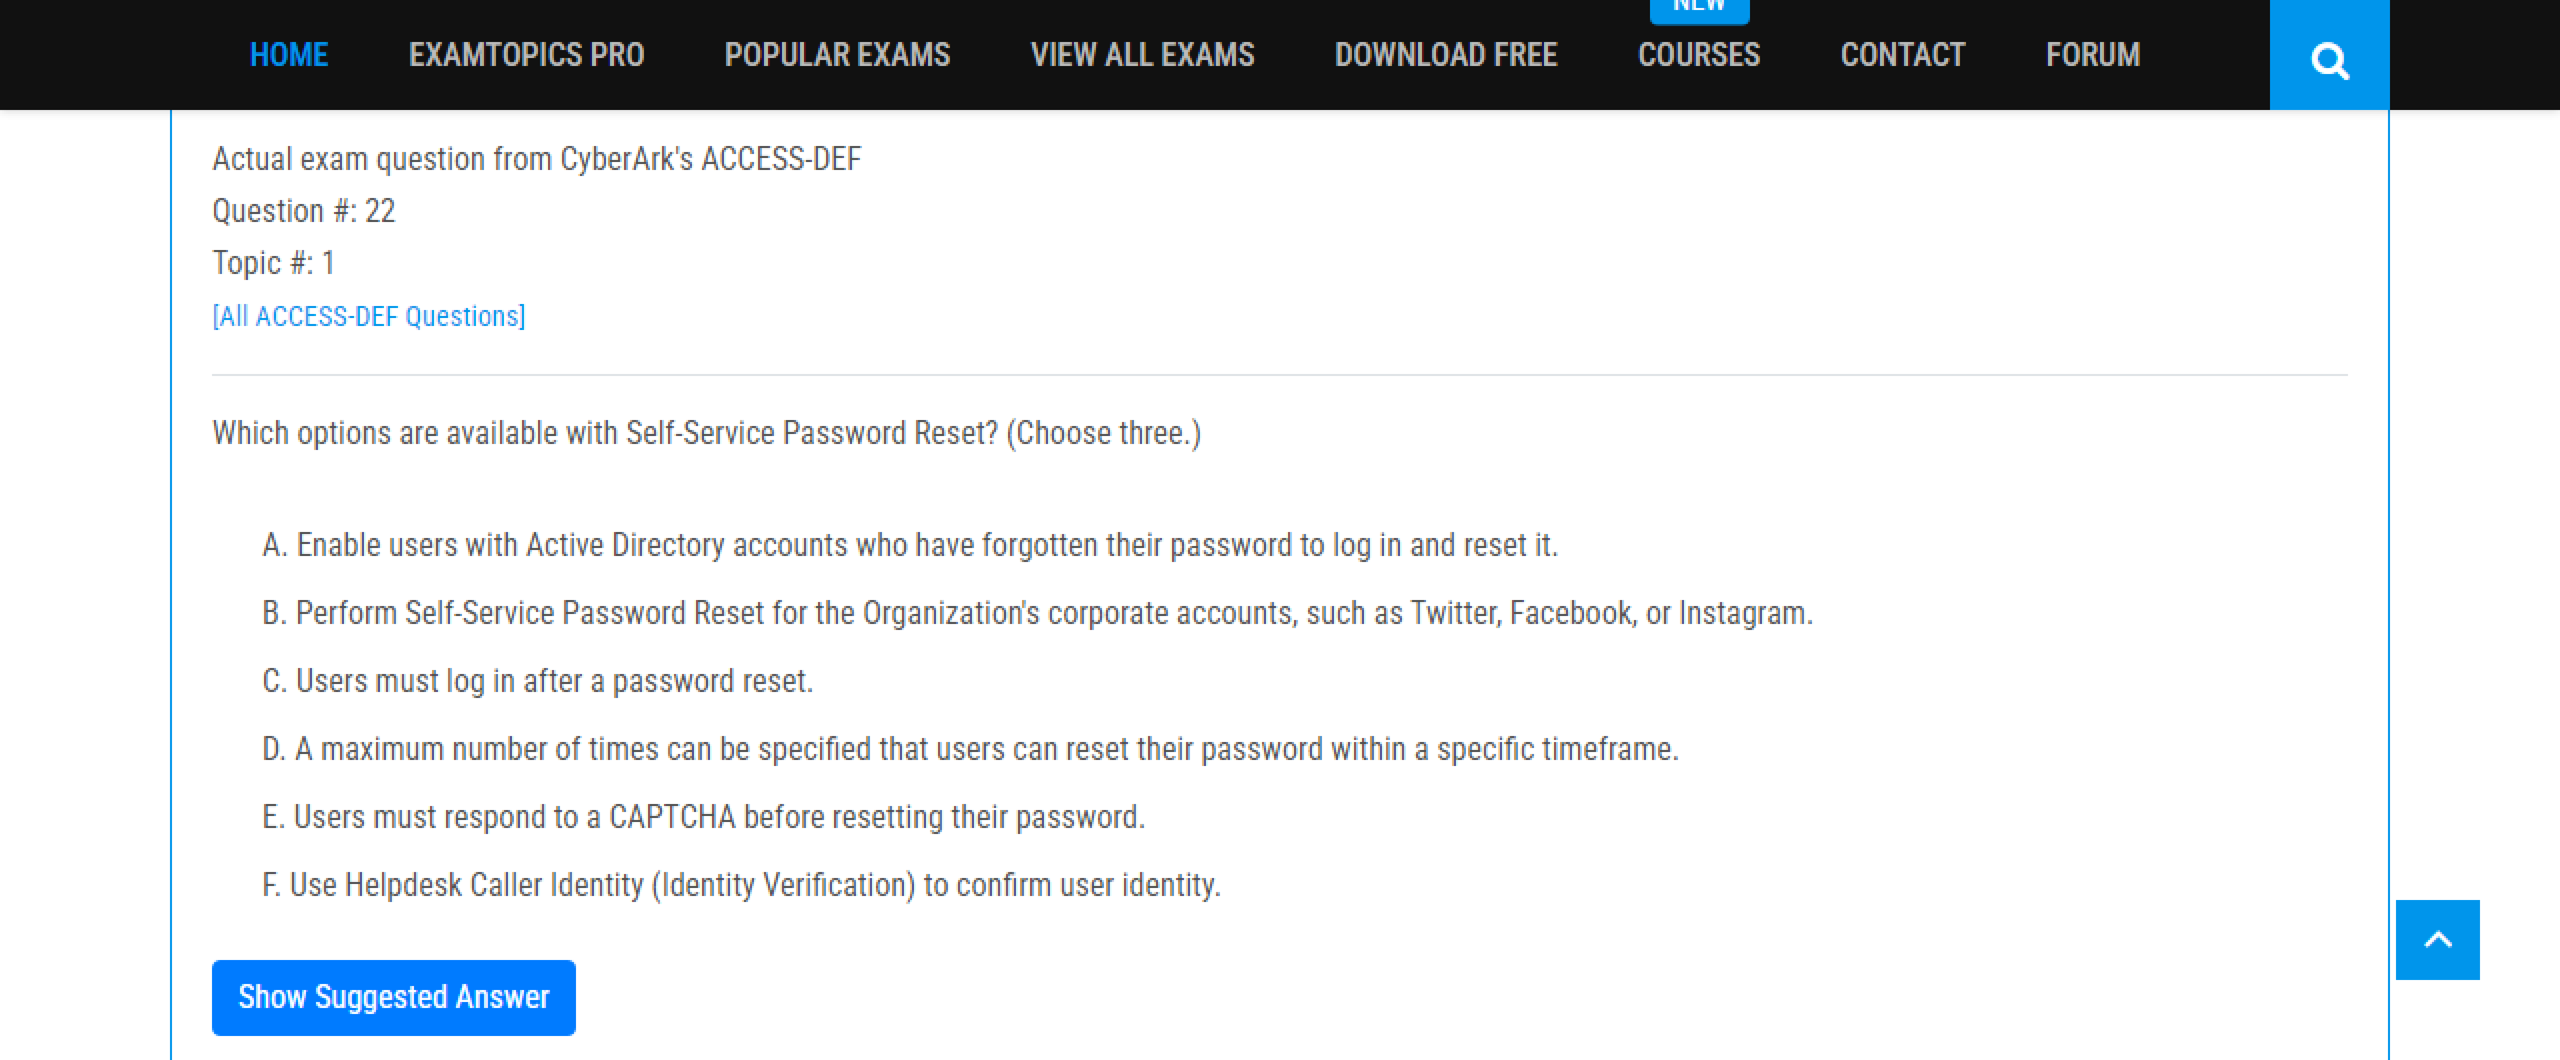
A. Set maximum number of joinable endpoints to "unlimited".

B. Set Expiry Date to "Never".

C. Set the IP Address range to the user's' home network range.

D. Set a description within the enrollment code.

E. Reinstall Windows Device Trust.



Actual exam question from CyberArk's ACCESS-DEF

Question #: 33

Topic #: 1

[All ACCESS-DEF Questions]

You are tasked to enforce certificate based authentication onto all the domain-joined Windows machines within your organization. Based on the inventory record, there are 1000 Windows machines, which include 150 standalone Windows machines. The enrollment will be conducted from either the office network or through the Virtual Private Network (VPN).

Which parameter(s) should you define within the enrollment code to ensure the security of the code and that only the authorized endpoints get registered?

A. Set an expiration date defining when the code should expire.

B. Specify the maximum number of devices that can be enrolled.

C. Define the enrollment code to only the specific office/VPN IP network segment.

D. Define that only Linux machines may be enrolled.
