

- Expert Verified, Online, **Free**.

A customer wants to display a small toolbar with three icons - a "sad face," a "face with neutral expression," and a "happy face" - on the bottom of every page in their application.

Users will be instructed to use the icon that best expresses their current experience using the application. This will allow the customer to collect valuable data about users.

Which object type should be called from each page to implement this feature?

- A. An interface, because the component must render user interface elements.
- B. An expression rule, because the component captures expressions of user sentiment for analysis.
- C. A decision, because the component captures a choice that users select from an array of custom selection components, rather than a standard dropdown or radio button.

Answer Area

Timer Event

Can accept multiple paths: when all paths arrive, all outgoing flows are executed at the same time.
 Can be added to a flow or attached to a smart service to trigger an Exception Flow or an Escalation.
 Can run automated activities.
 Can accept one incoming path and select one outgoing path.

XOR Gateway

Can accept multiple paths: when all paths arrive, all outgoing flows are executed at the same time.
 Can be added to a flow or attached to a smart service to trigger an Exception Flow or an Escalation.
 Can run automated activities.
 Can accept one incoming path and select one outgoing path.

Script Task

Can accept multiple paths: when all paths arrive, all outgoing flows are executed at the same time.
 Can be added to a flow or attached to a smart service to trigger an Exception Flow or an Escalation.
 Can run automated activities.
 Can accept one incoming path and select one outgoing path.

AND Gateway

Can accept multiple paths: when all paths arrive, all outgoing flows are executed at the same time.
 Can be added to a flow or attached to a smart service to trigger an Exception Flow or an Escalation.
 Can run automated activities.
 Can accept one incoming path and select one outgoing path.

Correct Answer:

| Correct Sequence | |
|------------------|---|
| Event | Can be added to a flow or attached to a smart service to trigger an Exception Flow or an Escalation |
| Gateway | Can accept one incoming path and select one outgoing path. |
| Task | Can run automated activities. |
| Gateway | Can accept multiple paths: when all paths arrive, all outgoing flows are executed at the same time. |

4903776 7 months, 1 week ago

AND Gateway is A, Script Task is B, XOR is D, and Timer Event is C
 upvoted 1 times

notinterested12345 3 months, 3 weeks ago

Based on the Appian documentation page for Timer Events:

"Timer events can either be added to the process flow by themselves, or they can be added within an Appian Smart Service to trigger an Exception Flow or an Escalation."

Therefore, Timer Event is B, and Script Task should be C.

Source:

https://docs.appian.com/suite/help/24.3/Intermediate_Event_-_Timer.html

You have a record type, ABC_Author, backed by a database table.

You need to retrieve the total number of authors without loading all the data.

According to Appian best practices, which code snippet accomplishes this goal in the most efficient way?

A.

```

a!queryRecordType(
  recordType: recordType!ABC Author,
  pagingInfo: a!pagingInfo(
    startIndex: 1,
    batchSize: 1
  ),
  fetchTotalCount: true
)

```

B.

```

a!queryRecordType(
  recordType: recordType!ABC Author,
  fields: {
    a!aggregationFields(
      measures: {
        a!measure(
          field: recordType!ABC Author.fields.id,
          function: "COUNT",
          alias: "count"
        )
      }
    )
  },
  pagingInfo: a!pagingInfo(
    startIndex: 1,
    batchSize: 1,
  )
)

```

C.

```

count(
  a!queryRecordType(
    recordType: recordType!ABC Author,
    fields: {
      recordType!ABC Author.fields.id
    },
    pagingInfo: a!pagingInfo(
      startIndex: 1,
      batchSize: 5000,
    ),
  ).data
)

```

You are creating a new customer onboarding application. Documents are required from customers for verification and onboarding purposes. You need to store these documents within Appian.
Which two areas in Appian should you configure? (Choose two.)

- A. Knowledge Center
- B. Decision Object
- C. Folder
- D. Feed

Correct Answer: AC

Currently there are no comments in this discussion, be the first to comment!

Where can an Appian Developer connect with and share their expertise with other Appian Developers?

- A. Appian Learning Paths via Appian Academy
- B. Appian Knowledge Base
- C. Appian Community discussions

Correct Answer: *C*

Currently there are no comments in this discussion, be the first to comment!

You created and published a new process model.

The process model has a start form with two synchronous subprocesses with 40 and 66 nodes each. All nodes are chained from the start node through the subprocesses to the end node. After the tasks and subprocesses, there is a second User Input Task in which the user can confirm the entries and add a comment.

When testing as a normal Acme business user, you see that the confirmation screen is not shown to you.

What might be the reason for this behavior?

- A. The maximum number of activity chained nodes is exceeded and breaks.
- B. The second User Input Task is assigned to the process initiator.
- C. The second User Input Task is assigned to the Acme business user group.

Correct Answer: A

Currently there are no comments in this discussion, be the first to comment!

Your customer wants to change the name of a field of an existing Custom Data Type (CDT) to match a renamed database field. The CDT is backed by a database entity, whose data store has the Automatically Update Database Schema option disabled. The old column name was BIRTHDATE and the new column name is DATE_OF_BIRTH. How should you proceed?

- A. Download the CDT as XSD, make the appropriate changes, and re-upload the XSD. Verify and publish the data store.
- B. Rename the field in the record type in Appian to automatically update the CDT field.
- C. Rename the field in the CDT in Appian. Verify and publish the data store.

Correct Answer: A

🗨️ 👤 **Sam_1999** 6 months, 2 weeks ago

C is the correct option

Explanation : Database Schema Update: Since "Automatically Update Database Schema" is disabled, Appian won't automatically update the database table when you modify the CDT.

Manual Update: You need to manually modify the database schema to reflect the new field name ("DATE_OF_BIRTH"). This ensures consistency between Appian's definition (CDT) and the actual database structure.

CDT Update in Appian: After manually updating the database schema, rename the corresponding field within the CDT in Appian to match the new database column name. This step keeps the Appian definition aligned with the database.

Data Store Verification and Publishing: Finally, verify and publish the data store in Appian. This process validates the changes made to the CDT against the database schema and ensures Appian can interact with the data correctly.

upvoted 3 times

Which step can be critical in passing information from a form back to a process model?

- A. Configure the Data Management tab.
- B. Configure the activity class parameters of a Write to Data Store Entity node. a
- C. Configure inputs on the Data tab of a User Input Task.

Correct Answer: C

Currently there are no comments in this discussion, be the first to comment!

Review the following expression rule:

```
wherecontains(  
  ri!name,  
  index(ri!directory, "name")  
)  
{  
  a!map(  
    name: "Maria",  
    employeeNumber: 100  
  ),  
  a!map(  
    name: "Steven",  
    employeeNumber: 101  
  )  
}
```

ri!name is defined as "Maria". ri!directory is defined as the following:

What is the expected output?

- A. Maria
- B. 0
- C. 1

Correct Answer: C

You receive a bug ticket that states "After selecting a value for the drop-down field, the value disappears."

You investigate and notice that when you select the drop-down, the proper choice labels display. When you select an option, the value updates properly in the corresponding rule input.

What is the issue and how can you fix this bug?

- A. The value parameter is improperly configured on the drop-down component. You need to map the value to the proper rule input or variable.
- B. The user group for the lookup table is incorrect. You need to add the user to the proper group.
- C. The choice labels parameter of the drop-down field is not configured as a list. You need to wrap the value with curly brackets.

Correct Answer: A

Currently there are no comments in this discussion, be the first to comment!

ACME Automobile uses Appian to manage their vehicle fleet. Vehicle records can have a status of either "active" or "inactive". Users are primarily concerned with active vehicles and want to see only those records by default when viewing the Vehicle records list. However, it is important for users to be able to see the unfiltered list of Vehicle records on demand to address occasional auditing requests from managers.

Which configuration supports the desired Vehicle record list behavior?

- A. Visibility on the Status column in the Vehicle record list set with conditional logic.
- B. A source filter set to exclude vehicles with status "inactive".
- C. A user filter for the status field with a default option corresponding to "active".

Correct Answer: C

```

Match each expression rule to the expected output.

Note: Each output will be used once or not at all. To change your responses, you may deselect your response by clicking the blank space at the top of the selection list.

Answer Area

difference(local!groupA, local!groupB)

- {6, 8, 10, 12, 3, 9}
- {8, 10}
- {6, 12}

union(local!groupA, local!groupB)

- {6, 8, 10, 12, 3, 9}
- {8, 10}
- {6, 12}

intersection(local!groupA, local!groupB)

- {6, 8, 10, 12, 3, 9}
- {8, 10}
- {6, 12}

How do you refer to metadata of a process model object within process model expressions? For example: the creator, name, or description.

- A. Process Properties, referred to in process model expressions using the pp! domain.
- B. Process Variables, referred to in process model expressions using the pv! domain.
- C. Process Model Properties, referred to in process model expressions using the pm! domain.

Correct Answer: C

You receive the following error message after creating a dropdown field:

```
A dropdown component has an invalid value for "choiceValues".  
The choiceLabels and choiceValues arrays must be the same length, but choiceLabels was length 12
```

What could be the problem?

- A. The choiceLabels and choiceValues datatypes do not match.
- B. The choiceValues has too few values.
- C. The choiceLabels have too few labels.

Correct Answer: *B*

You are working on a process model "VIM Update Vehicle."

You want to call another process "VIM Get Service Date" that accepts pv!vehicleId as a process parameter and sets a value for pv!serviceDate.

The next node in VIM Update Vehicle depends on the value of pv!serviceDate.

Which node should you use to execute "VIM Get Service Date" from VIM Update Vehicle?

- A. Start Process smart service
- B. Asynchronous subprocess with activity chaining
- C. Synchronous subprocess with input and output variables configured

Correct Answer: C

Which two scenarios are ideal for using Appian Portals? (Choose two.)

- A. A manager wants to obtain a view of their team's performance.
- B. A retail customer wants to conduct a public survey for their recently launched product.
- C. An employee who does not have an account wants to register for their company's vehicle fleet a management system.
- D. A user needs to submit support requests when they are using their mobile device in areas with bad network coverage.

Correct Answer: *BC*

You have two Custom Data Types (CDT): ACME_invoice and ACME_invoiceItem that have a flat relationship.

The invoice item table has a field that is a foreign key to the invoice table. You are leveraging the database to automatically generate their primary keys.

How should you structure the process model to add a new invoice and the new invoice items to the system?

- A. 1. Write to Multiple Data Store Entities smart service (Writing to the ACME_invoiceItem table and ACME_invoice table).
- B. 1. Write to Data Store Entity smart service (Writing to the ACME_invoiceItem table).
- 2. Script Task to update foreign keys.
- 3. Write to Data Store Entity smart service (Writing to the ACME_invoice table).
- C. 1. Write to Data Store Entity smart service (Writing to the ACME_invoice table).
- 2. Script Task to update foreign keys.
- 3. Write to Data Store Entity smart service (Writing to the ACME_invoiceItem table).

Correct Answer: C

After selecting a record, a user wants to initiate an activity in the context of that selected record.

You start by creating the process model that implements this activity.

What should you do next?

- A. Add the process model as a record list action to that record.
- B. Configure a site page as an action to kick off the process model.
- C. Add the process model as a record related action to that record.

Correct Answer: C

An interface references an expression rule.

What are the relationships between these objects?

- A. Dependents and Reliants
- B. Dependents and Precedents
- C. Inheritance and Association

Correct Answer: *B*

Currently there are no comments in this discussion, be the first to comment!

You need to be able to define record type relationships.

What is a required prerequisite in Appian?

- A. The record types must have data sync enabled.
- B. The record types must be on a virtualized data source.
- C. The record types must be stored in the local Appian business database.

Correct Answer: A

Currently there are no comments in this discussion, be the first to comment!

You need to create a record type with data sync enabled.

What are the supported data sources?

- A. Web Services, Salesforce, Database
- B. Web Services, Process Reports, Database
- C. Salesforce, Process Models, Database

Correct Answer: A
