upvoted 5 times

🗨️ **AmaraGod** Most Recent 2 months, 3 weeks ago

Assumptions and constraints are key outputs of enterprise analysis tasks. During enterprise analysis, business analysts identify and document the assumptions that underlie the business context and any constraints that may limit the project's options or solutions. These outputs are crucial for understanding the environment in which the solution will be developed and ensuring that stakeholders are aware of the boundaries within which the project will operate.

Ans is B. Domain SME's are stakeholders.
upvoted 2 times

🗨️ **rhsdeal** 3 years, 3 months ago

This is a Babok v2 question in the v2 guide pg 103 the stakeholders for prioritize requirements are:

6.1.6 Stakeholders

Domain SME: Domain subject matter experts may be invited to participate in the prioritization of requirements, to assess the relative business need, and to negotiate their importance.

Implementation SME: Implementation subject matter experts may be asked to evaluate the relative complexity or risk associated with the implementation of certain requirements.

Project Manager: The project manager is responsible for the implementation of the solution and will use the priority of requirements as an input into the project plan.

Sponsor: Since sponsors are ultimately accountable for the business solution and major project decisions, they need to be invited to participate in the discussion.

For v-3 Pg. 90 states the stakeholders of prioritization of requirements are: Customer, End User, Implementation Subject Matter Expert, Project Manager, Regulator, Sponsor.

You are the business analyst for a smaller project where there are few requirements. Management would still like you to create a method to trace the few requirements for this project.

What type of matrix would be best in this instance?

- A. Roles and responsibility matrix
- B. RACI matrix
- C. Coverage matrix
- D. Requirements trace matrix

Suggested Answer: C

Community vote distribution

D (100%)

🗨️ **km_45** Highly Voted 3 years, 11 months ago

This is from the older version: in BABOC v3 there are no matrix techniques recommended to trace requirements (p82)
upvoted 6 times

🗨️ **Nobita135** Most Recent 3 weeks, 5 days ago

Selected Answer: D

A Requirements Traceability Matrix (RTM) is the best tool for tracking requirements, even on smaller projects. It helps link requirements to project deliverables, ensuring that all requirements are addressed throughout the project lifecycle. The RTM allows the business analyst to trace requirements from their origin through development, testing, and final implementation. This is useful regardless of the number of requirements, as it ensures nothing is overlooked.
upvoted 2 times

🗨️ **pabitrasharma** 6 months, 3 weeks ago

you can not find "Coverage matrix" word on BABOK V3. "Coverage matrix" is no longer a valid answer. Either change the answer or drop this question from the list

Selected Answer: D

A BABOK v2 question. As per BABOK v3, the correct answer is Requirements Traceability Matrix. The ability for tracking the relationships between sets of requirements and designs from the original stakeholder need to the actual implemented solution.
upvoted 1 times

🗨️ **jeffreyokonkwo_** 1 year ago

D. Requirements trace matrix

A Requirements Trace Matrix (RTM) is a tool used to track and manage requirements throughout the project lifecycle. Even in smaller projects with few requirements, an RTM can be valuable in ensuring that each requirement is linked back to its source and that its implementation is tracked through to completion. It helps maintain transparency and control over the requirements and their status during the project.
upvoted 1 times

🗨️ **sssyeng** 2 years, 3 months ago

No mention of Coverage Matrix in BABOK 3.0. Requirements Life Cycle Management should have it.
A coverage matrix is a table or spreadsheet used to manage and facilitate the tracing of requirements. This simple approach is used on simple projects where there are only a few requirements or on projects where traceability is very limited and not too detailed.

You are the business analyst for your organization and have many solutions available to an identified problem. You would like a way to quickly and fairly determine which solution is the best choice for your organization.

Which of the following approaches would allow you to determine the top-rated solutions for your organization?

- A. Scoring system
- B. Acceptance and evaluation criteria
- C. Vendor assessment
- D. Voting system

Suggested Answer: A

Community vote distribution

jeffreyokonkwo_ Highly Voted 1 year ago

I see where the confusion may arise. "Acceptance and evaluation criteria" are indeed important in the context of evaluating and accepting a solution, but they don't inherently provide a mechanism for comparing multiple solutions against each other. They are typically used to assess whether a particular solution meets the predefined standards and requirements.

On the other hand, a scoring system involves assigning numerical values or scores to different solutions based on specific criteria. The scores are then used to compare and rank the solutions. This systematic approach allows for a more quantitative evaluation and comparison, helping to identify the most suitable solution.

In practice, you may use acceptance and evaluation criteria within a scoring system. The criteria define what is important, and the scoring system quantifies how well each solution meets those criteria, aiding in the decision-making process.

Shreejith Highly Voted 2 years, 6 months ago

Selected Answer: B

Evaluation criteria are the measures used to assess a set of requirements in order to choose between multiple solutions, I think option B could be a correct option

upvoted 7 times

Sambhav Most Recent 2 weeks, 3 days ago

Selected Answer: A

Here we're talking about the BEST and not the CORRECT. Acceptance criteria is the criteria that you may use to accept a solution or a product. Voting is the quick and democratic but you might not get the best or the correct solution.

In Vendor assessment, you will be doing the assessment of the vendor

A scoring system involves assigning weighted scores to various criteria important to the organization and then evaluating solutions against these criteria.

So if you have to rank the best solution then obviously you should be following a scoring system

BABOK v3 includes the Decision Analysis technique, which outlines the use of scoring and weighting systems to evaluate and compare different solution options systematically.

Refer to Chapter 10: Techniques in BABOK v3 for details on Decision Analysis (p. 261). This technique highlights the importance of using weighted criteria and scores to facilitate decision-making, especially when evaluating and comparing multiple options.

upvoted 1 times

🗨️ 👤 **Rabbitsfoot** 9 months, 1 week ago

Selected Answer: B

BABOK v3 pg 84
5.2.4 Elements

.1 Maintain Requirements

Requirements are maintained so that they remain correct and current after an approved change. Business analysts are responsible for conducting maintenance to ensure this level of accuracy is retained. For requirements to be properly maintained they must be clearly named and defined, and easily available to stakeholders.

Business analysts also maintain the relationships among requirements, sets of requirements, and associated business analysis information to ensure the context and original intent of the requirement is preserved. Repositories with accepted taxonomies assist in establishing and maintaining links between maintained requirements, and facilitate requirements and designs traceability.

You are working with Terry on the conduct stakeholder analysis task as part of the business analysis duties in your company. Terry wants to know why it's so important to identify stakeholders so early in the business analysis duties.

Which one of the following statements best addresses the need to identify the stakeholders early on in the business analysis duties?

- A. It's important to identify the stakeholders so the business analyst knows who to report to.
- B. It's important to identify the stakeholders so the business analyst knows who to bill for the project.
- C. It's important to identify the stakeholder so the business analyst can help ensure the timely delivery of the requirements deliverables.
- D. It's important to identify the stakeholders so the stakeholders know who the business analyst is.

Suggested Answer: C

  **aribosqd** 4 months, 3 weeks ago

C BABOK V2. Stakeholder roles must be identified early in the project in order to help ensure timely delivery of requirements deliverables.

upvoted 1 times

Nancy has asked you to trace a particular requirement for her.

What does 'to trace a requirement' mean?

- A. Tracing a requirement means to look at a requirement and the others to which it is related. It links risk, cost, quality, and scope elements to stakeholder and solution requirements to other artifacts created by the team and to solution components.
- B. Tracing a requirement means to look at a requirement and the others to which it is related. It links business requirements to stakeholder and solution requirements to other artifacts created by the team and to solution components.
- C. Tracing a requirement means to look at a requirement and the others to which it is related. It links business requirements to components in the project's work breakdown structure.
- D. Tracing a requirement means to track a requirements from its first identification all the way to its completion to see what issues, risks, costs, quality, and defects have surrounded the requirement

Suggested Answer: B

Community vote distribution

B (67%) A (33%)

 **Stan333** Highly Voted 11 months, 4 weeks ago

The correct answer is B

Traceability does not link risk, cost, quality, and scope elements to stakeholder, it helps to manage risk, cost, scope, etc. Traceability simply links requirements backwards (to stakeholder/source), forward (to solution components) and to other requirements.

upvoted 6 times

 **omaahi** Most Recent 1 week, 4 days ago

Selected Answer: B

According to the BABOK Guide, requirement traceability is the ability to identify and document the lineage of a requirement. This includes: Its relationships to other requirements.

Its connection to design elements, solution components, and artifacts.

Its alignment with business objectives and stakeholder needs.

Tracing requirements ensures that every requirement delivers value and is aligned with organizational goals. It allows for impact analysis, gap analysis, and validation across the lifecycle of the solution.

upvoted 1 times

 **Nobita135** 3 weeks, 5 days ago

Selected Answer: B

Requirement tracing involves identifying and tracking relationships between business requirements, stakeholder requirements, and solution requirements, as well as linking them to project artifacts and solution components. This ensures that all requirements are accounted for, properly implemented, and aligned with business goals. It helps maintain traceability throughout the project lifecycle, enabling better change management, impact analysis, and verification.

upvoted 1 times

 **basmus12** 3 months ago

Selected Answer: A

Traceability is used to help ensure that the

solution conforms to requirements and to assist in scope, change, risk, time, cost, and communication management. It is also used to detect missing functionality or to identify if there is implemented functionality that is not supported by any requirement.

Answer is A:

upvoted 2 times

When do change requests generally increase in a project?

- A. During the project's launch.
- B. Towards the beginning of the project.
- C. During the project scope management processes.
- D. Towards the end of the project.

Suggested Answer: D

🗨️ **jeffreyokonkwo_** Highly Voted 👍 1 year ago

D. Towards the end of the project.

As a project progresses, stakeholders may gain a clearer understanding of the project's scope, objectives, and requirements. This increased clarity, combined with the evolving nature of projects and unforeseen circumstances, can lead to an uptick in change requests, especially as the project approaches completion. It is during the later stages of a project when stakeholders may identify additional requirements, modifications, or corrections that weren't apparent earlier in the project lifecycle.

upvoted 5 times

🗨️ **CBAPCohort6** Most Recent 🕒 2 months, 3 weeks ago

D - Towards the end of the project.

upvoted 1 times

🗨️ **serzsh** 7 months, 2 weeks ago

B. Change requests generally increase towards the beginning of a project when initial expectations, specifications, and requirements are being clearly defined and understood. This is often when stakeholders realize that certain aspects of the project need to be amended, added, or removed to meet the stipulated objectives.

Predictive approaches typically call for formal documentation and representations. Business analysis information may be captured in a formal document or set of representations following standardized templates. Information is captured at various levels of detail. The specific content and format of business analysis information can vary depending on the organizational methodologies, processes, and templates in use.

Business goals and objectives describe the ends that the organization is seeking to achieve. BABOK V3 6.2.4.1
upvoted 10 times

 **Farooq_95** Most Recent 2 months, 2 weeks ago

Selected Answer: A

As per BABOK v3 6.2.4.1, A future state can be described in terms of business objectives or goals in order to guide the development of the change strategy and identify potential value. Business goals and objectives describe the ends that the organization is seeking to achieve. Goals and objectives can relate to changes that the organization wants to accomplish (which is actually a need), or current conditions that it wants to maintain.

upvoted 1 times

 **jeffreyokonkwo_** 6 months, 3 weeks ago

A. Business goals and objectives

During the process of defining business needs, it is crucial to identify and understand the business goals and objectives. These goals and objectives represent the desired ends or outcomes that the organization is aiming to achieve. By clearly defining and understanding these business goals, the business analysis process can proceed to identify alternative solutions, evaluate requirements, and ultimately contribute to the development of a solution that aligns with the organization's overarching objectives.

To communicate the requirement (Communicate Business Analysis

Information) Good answer is A: Determine Objectives and Format of Communication. The first element of this task. Babok v3 upvoted 9 times

Nobita135 Most Recent 3 weeks, 5 days ago

Selected Answer: A

Before making a presentation about project requirements, determining an appropriate format for the presentation is essential. The format should align with the audience's needs, the complexity of the requirements, and the presentation's goals (e.g., informing, seeking approval, or clarifying requirements). A well-prepared format helps ensure the message is clear, engaging, and understood by stakeholders.

C. Confirm that the stakeholders have signed off on the requirements:

The purpose of the presentation could be to seek stakeholder approval, so requiring sign-off beforehand doesn't make sense. upvoted 2 times

You are the business analyst for your organization. Gary and Janet, two key stakeholders in the project, are in disagreement over a requirement for the type of software to be installed on the server your solution calls for. What must happen in this instance before formal approval can be offered?

- A. The conflict will need to be resolved through research, resolution, or through a third-party mediation.
- B. Gary and Janet will need to determine who has seniority in the company to determine which requirement takes precedence.
- C. The conflict will need to be removed from the solution scope until Gary and Janet come to a solution.
- D. The business analyst will need to make a decision on which requirement is most appropriate.

Suggested Answer: A

Community vote distribution

A (100%)

🗨️ 👤 **Farooq_95** 2 months, 2 weeks ago

Selected Answer: A

Conflict between key stakeholders need to be resolved before formal approval. As per BABOK v3 5.5.4.2, to maintain stakeholder support for the solution, consensus among stakeholders is usually sought prior to requesting approval of requirements. Stakeholder groups frequently have varying points of view and conflicting priorities. A conflict may arise among stakeholders as a result of different interpretations of requirements or designs and conflicting values placed on them. The business analyst facilitates communication between stakeholders in areas of conflict so that each group has an improved appreciation for the needs of the others. Conflict resolution and issue management may occur quite often, as the business analyst is reviewing requirements and designs, and aiming to secure sign-off

Selected Answer: C

BAPM emphasizes the importance of having a change control process in place. We know that change can occur at any time and have to take into account the BAPM emphasis on this. Therefore, correct answer is C.

upvoted 1 times

🗨️ **jeffreyokonkwo_** 1 year ago

I think its C

C. Changes to requirements can occur any time after the project's change control system has been enacted.

In a business analysis planning and monitoring assignment, changes to requirements are typically managed through a change control system. Once the change control system is in place, changes to requirements can be considered and evaluated. The change control system helps ensure that changes are thoroughly analyzed, documented, and approved by relevant stakeholders before implementation. This process helps maintain control over the project scope and ensures that changes are aligned with project objectives and priorities.

🗨️ 👤 **binu801** Highly Voted 3 years, 5 months ago

option A should not be the right answer, one must understand first why its being done in this way. even after Automating , it will still remain inefficient, may be the process needs revamp or elimination

upvoted 7 times

🗨️ 👤 **Nobita135** Most Recent 3 weeks, 5 days ago

Selected Answer: A

The observation that stakeholders are using multiple software packages and performing duplicate tasks suggests inefficiencies that could be resolved through automation. Automation can streamline tasks, reduce manual data entry, and integrate different systems to generate reports more efficiently. By recommending automation, the business analyst helps improve operational efficiency, reduce errors, and save time.

upvoted 1 times

🗨️ 👤 **Dmylitos** 8 months, 4 weeks ago

Option A suggests addressing the inefficiencies observed by automating manual tasks or streamlining processes through technology solutions. It involves identifying opportunities for automation to improve efficiency and reduce redundant activities.

upvoted 1 times

🗨️ 👤 **Rabbitsfoot** 9 months, 1 week ago

Selected Answer: A

Keywords: 'you notice' so observation is done. Then you'll look at increasing efficiencies - A.

upvoted 2 times

🗨️ 👤 **Farooq_95** 9 months, 3 weeks ago

Answer B is correct because the question says that BA noticed some inefficiencies and it is now time to understand the details of the inefficiencies via interviewing stakeholders (i.e., perform RCA through active observation) so that correct solution can be explored and implemented.

A is incorrect because automation does guarantee to address noticed inefficiencies.

C is incorrect because addressing non-functional requirements will only ensure that solution meet specific conditions, not addressing the

inefficiencies mentioned in question

D is also incorrect because passive observation does not assist gathering exact details of inefficiencies.

upvoted 2 times

  **Ngho** 11 months, 3 weeks ago

The answer is B. Its logical, the process was noticed but not actively involved. There is need to be involved to get more details.

You are the business analyst for your organization and are beginning the requirements analysis processes. Which one of the following statements best describes the requirements analysis processes?

- A. It ensures that analysis and implementation efforts focus on the most critical requirements.
- B. It covers the definition of stakeholder requirements, which describe what a solution must be capable of doing.
- C. It defines all of the work, and only the required work, to complete the project objectives.
- D. It is conformity to requirements and a fitness for use.

Suggested Answer: B

C (75%)

B (25%)

🗨️ **Nobita135** 3 weeks, 5 days ago

Selected Answer: B

The Requirements Analysis process involves defining, analyzing, and refining stakeholder requirements to ensure that a proposed solution meets the business needs. This includes detailing what the solution must be capable of doing, how it should perform, and the conditions under which it will operate. The focus is on understanding and documenting the requirements clearly to guide the development of the solution.

upvoted 1 times

🗨️ **CBAPCohort6** 2 months, 3 weeks ago

Option B- Page 135 BABOK v3

upvoted 1 times

🗨️ **Georgian1994** 11 months ago

Selected Answer: B

During Requirements Analysis and Design Definition, business analysts transform elicitation results into requirements and designs in order to define the change(...), analyze the needs in order to recommend a solution that meets the needs(...), define solution options and recommend the one that is most likely to address the need and has the most value(...), tailor the requirements and designs so that they are understandable and usable by each stakeholder group(...), analyze and quantify the potential value of the solution options model and describe the context in formats that are understandable and usable by all stakeholders. - BABOK V3 Table 7.0.1: The Core Concept Model in Requirements Analysis and Design Definition pg 135

upvoted 2 times

🗨️ **jeffreyokonkwo_** 1 year ago

A. ****It ensures that analysis and implementation efforts focus on the most critical requirements.****

Requirements analysis is the process of examining, documenting, and managing requirements to ensure that they are complete, accurate, and unambiguous. This process involves understanding stakeholder needs, analyzing requirements for feasibility, and prioritizing them based on their criticality and impact on project success. Therefore, option A best describes the focus of the requirements analysis processes.

upvoted 1 times

🗨️ **xiaoyangwu** 1 year, 4 months ago

Selected Answer: C

I think the answer is C, because:

1. Not only stakeholder requirements, but also solution requirements, Transition requirements etc.
2. In the description of B, the word "solution must be" means solution requirement, not stakeholder requirement.

upvoted 3 times

Management has asked you, a business analyst for your organization, to create the solution scope for an identified problem. In order to complete this task, you'll need three elements.

All of the following are elements you'll need in order to write the solution scope except for which one?

- A. Work breakdown structure
- B. Implementation approach
- C. Solution scope definition
- D. Dependencies

Suggested Answer: A

  **Farooq_95** Most Recent 3 months, 2 weeks ago

Specifically refers to BABOK v2 Task 4.5, not BABOK v3
upvoted 1 times

  **cert_diwana** 9 months ago

Selected Answer: A

While a work breakdown structure (WBS) is an important part of project planning and management, it is not typically considered a direct component of the solution scope. The solution scope primarily includes the definition of what the solution is expected to achieve, the boundaries and constraints, the major features or components, and the high-level implementation approach.

upvoted 2 times

You are the business analyst for your organization and you are preparing the business case for a proposed solution. You need to include the management horizon in your business case.

What is the management horizon?

- A. It is the expected deliverables that will be beneficial for the organization.
- B. It is the point in time when the solution will be completed.
- C. It is the duration of each phase of the project until the solution earns a profit.
- D. It is the point in time for the solution to break even on cost and begin earning a profit.

Suggested Answer: D

Community vote distribution

D (100%)

🗨️ **Rsolan** 6 months, 1 week ago

Don't think this is in V3

upvoted 1 times

🗨️ **cert_diwana** 1 year, 3 months ago

In a business case, the management horizon typically refers to the project's completion date, while the "break-even point" or "payback period" addresses the financial aspect of when the project starts generating a profit.

Which one of the following is an example of a non-negotiable demand by a stakeholder during the requirements prioritization session?

- A. All requirements are ranked as high
- B. Communication
- C. All requirements are prioritized by cost-benefits ratio
- D. Cost

Suggested Answer: A

Community vote distribution

A (100%)

🗨️ **Farooq_95** 2 months ago

Selected Answer: A

It's a BABOK v2 question. BABOK v2 6.2.4.2 states that Non-negotiable demand: Stakeholders attempt to avoid difficult choices, fail to recognize the necessity for making tradeoffs, and/or desire to rank all requirements as high priority.

upvoted 1 times

🗨️ **subyottun** 6 months, 2 weeks ago

Can someone explain why the answer is A, I'm a bit confused

upvoted 1 times

🗨️ **jeffreyokonkwo_** 5 months, 3 weeks ago

A. All requirements are ranked as high

This is an example of a non-negotiable demand because it implies that all requirements must be treated as high priority, leaving no room for negotiation or prioritization based on other factors. It sets an inflexible stance that doesn't allow for trade-offs or adjustments based on different criteria such as cost, benefits, or other considerations.

upvoted 1 times

🗨️ **iconteduca** 6 months ago

In Babok 2, p. 101 - Prioritize Requirements:

Challenges in facilitating a requirements prioritization session include:

Non-negotiable Demands: Stakeholders attempt to avoid difficult choices, fail to recognize the necessity for making tradeoffs, or desire to rank all requirements as high priority.

Unrealistic Tradeoffs: The solution development team may intentionally or unintentionally try to influence the result of the prioritization process by overestimating the difficulty or complexity of implementing certain requirements.

upvoted 1 times

You are the business analyst for your organization and are working with Virginia on the allocation of requirements for a new solution. You have assigned Virginia the task of breaking down the solution scope into smaller components for allocation. What technique have you asked Virginia to complete in this scenario?

- A. Decision analysis
- B. Business rules analysis
- C. Process modeling
- D. Functional decomposition

Suggested Answer: *D*

  **jeffreyokonkwo_** 5 months, 3 weeks ago

D. Functional decomposition

Functional decomposition is the technique where a complex solution or system is broken down into smaller, more manageable parts or functions. In this scenario, when you assign Virginia the task of breaking down the solution scope into smaller components for allocation, you are essentially asking her to perform functional decomposition. This helps in better understanding, organizing, and allocating the various components of the solution.

Henry is the business analyst for his organization. Management has created a pre-determined budget of \$450,000 for his solution. Henry has identified the project requirements but now wants to prioritize them based on timeboxing and budgeting. Henry examines the cost of the requirements and begins removing the requirements from the allowed list in order to meet the \$450,000 budget.

What timeboxing or budgeting approach is Henry using?

- A. Parametric
- B. All in
- C. Selective
- D. All out

Suggested Answer: B

Community vote distribution

A (62%)

B (38%)

🗨️ **Nobita135** 3 weeks, 5 days ago

Selected Answer: C

Henry is using the Selective approach to timeboxing and budgeting. In this approach, the business analyst prioritizes requirements by evaluating their costs and removing less critical or lower-priority requirements until the project fits within the allocated budget or time constraints. This ensures that the most valuable and essential requirements are included while staying within the budget limit of \$450,000.

upvoted 2 times

🗨️ **CBAPCohort6** 2 months, 3 weeks ago

All in - Option B

upvoted 1 times

🗨️ **Typhat** 11 months ago

Selected Answer: B

All In – You start by including all the requirements necessary for the solution to be developed and then remove/postpone the requirements whose implementation will cause the project to exceed the deadline.

upvoted 1 times

🗨️ **Iron79Man** 1 year, 2 months ago

I think that it's Selectable as based on the allocated budgeted , certain requirements have been selected to move one. It wasn't mentioned that the least expensive will be selected , or most expensive ones. Therefore it's selective , not based only on the budget but other parameters' like requirements dependencies

You are the business analyst for the TGH Organization and are determining if you should buy or build a solution for your company. You have determined that you can create the in-house solution for \$78,000 with a monthly support cost of \$8,765. A vendor can create the solution for \$61,000 with a monthly support costs of \$7,990.

How long will it take your company to break even if you choose the internal solution versus the vendor's solution?

- A. 36 months
- B. 12 months
- C. 6 months
- D. 22 months

Suggested Answer: D

-  **Banafa** Highly Voted 4 years, 3 months ago
 need to find the common variable used in make or buy which is here number of months.
 Alt (make) the Break point = $61000 + 7990 * N$ where N number of months
 Alt (buy) the Break point = $78000 + 8765 * N$ where N number of months
 at break point value the two alternatives are equal
 $61000 + 7990 * N = 78000 + 8765 * N$
 $N = 21.935$
 upvoted 15 times
-  **binu801** 3 years, 5 months ago
 by solving this equation, we will get a negative value of N, the question is incorrect.
 upvoted 5 times
-  **km_45** Highly Voted 3 years, 11 months ago
 there is an error in the numbers: the cost (or support) should be switched to break even at 22 months. Otherwise, they would never ever break even: the first solution is more expensive both in cost and support.

Selected Answer: D
 21.93, closest answer is 22months. Option D
 upvoted 1 times
-  **Farooq_95** 9 months, 1 week ago
 The internal solution will never break even because its costs will always be higher than the vendor's cost. The vendor's cost are always beneficial as its fixed as well as variable costs are lower compared to internal solution's cost. As the time passes, the internal solution tends to cost more compared to internal solution. This is also justified by negative N value resulted from solving the equation: $\$78,000 + \$8,765 * N = \$61,000 + \$7,990 * N$
 upvoted 2 times
-  **Nurialzard** 2 years, 3 months ago
 It is true that the values for the monthly costs are reversed. Like this, the number of months would be negative since the two functions would never meet, as Olivier said
 upvoted 1 times
-  **Hong_i** 2 years, 3 months ago
 Buy: \$8765
 Make: \$68990
 Implementation cost difference: \$17775
 Monthly cost difference: \$775
 Implementation cost difference: \$17775 / Monthly cost difference: \$775 = 22.93 months to break even. Nearest answer D

upvoted 2 times

🗨️ 👤 **OlivierPaudex** 2 years, 9 months ago

makavely007 answer is correct, only if we reverse the monthly cost. Without that, there is no chance that second solution will break first one

upvoted 1 times

🗨️ 👤 **SavvyBA** 3 years, 1 month ago

This is a tricky question. I think the way it is written throws me off, but ultimately I see that the "break even" is referring to how much time will it take to offset the extra expenses that would have been saved up front. E.g., if the company had chosen the vendor's solution, they would have immediately realized and equivalent of 22 months of savings vs. the internal solution.

upvoted 1 times

🗨️ 👤 **makavely007** 3 years, 1 month ago

Monthly extra cost for in-house solution= $\$8765-\$7990=\$775$

Extra cost expended in a year for in-house solution against vendor solution= $\$78000-\$61000=\$17000$

How many months would it take to cover extra yearly cost at $\$775$ monthly= $\$17000/\$775=21.935$ or 22months

You are the business analyst for your organization. Management realizes that a proposed solution has risks that may cause the entire project to fail. They would like you to prioritize the requirements with maximum risks first so that if the project fails, there is little loss of capital in the project implementation.

What requirements prioritization approach is management asking you to create in this instance?

- A. Implementation difficulty
- B. Business or technical risk
- C. Likelihood of success
- D. Relationship to other requirements

Suggested Answer: B

Community vote distribution

B (100%)

🗉 👤 **CBAPCohort6** 2 months, 3 weeks ago

10.6 Business Capability Analysis

10.6.3.4 Risk Model

Capabilities alone do not have risks—the risks are in the performance of the capability, or in the lack of performance.

These risks fall into the usual business categories:

- business risk,
- technology risk,
- organizational risk, and
- market risk.

upvoted 1 times

🗉 👤 **Rabbitsfoot** 9 months, 1 week ago

Selected Answer: B

They want to prioritize the requirements based on the risks associated with them, aiming to address the most critical risks first to mitigate the potential failure of the project and minimize loss of capital.

BABOK V3 pg76: Prioritize Requirements: assesses the value, urgency, and risks associated with particular requirements and designs to ensure that analysis and/or delivery work is done on the most important ones at any given time.

Babok v3,

upvoted 1 times

🗨️ **basumus12** 3 months ago

Selected Answer: D

An interview is a systematic approach designed to elicit business analysis information from a person or group of people by talking to the interviewee(s), asking relevant questions, and documenting the responses. The interview can also be used for establishing relationships and building trust between business analysts and stakeholders in order to increase stakeholder involvement or build support for a proposed solution.

BABOK V3

upvoted 1 times

🗨️ **Rabbitsfoot** 9 months, 1 week ago

Selected Answer: D

Not fully convinced it's C. Scenarios and use cases and user stories are techniques used to model activity flows - not focused on identifying the actors and roles.

Keyword for me: 'identifies stakeholder roles'

I would therefore go with D. Interviews because that involves direct interaction with stakeholders to gather information about their roles, responsibilities, and perspectives.

See BAPM3.2 Plan Stakeholder Engagement 3.2.6 Technique: • Interviews: used to interact with specific stakeholders to gain more information or knowledge about stakeholder groups.

You are the business analyst for your organization. You are currently working with Steve on the organize requirements process. You and Steve have elected to use the user stories approach for this process.

What is the user stories approach for requirements organization?

- A. Stakeholders' experiences equate to the stakeholder requirements.
- B. Stakeholders are interviewed and their experiences are recorded to help identify the requirements.
- C. Stakeholders' objectives are described to identify the requirements that the solution will need to support.
- D. Stakeholders are interviewed and their stories are recorded as part of the requirements.

Suggested Answer: C

Community vote distribution

D (100%)

🗨️ **Dmylitos** 2 months, 3 weeks ago

Selected Answer: D

Option C describes a different approach known as "stakeholder objectives." In this approach, stakeholders' overarching objectives or goals are identified to derive the requirements that the solution must support. While it's a valid approach, it's not specifically the user stories approach. User stories, as described in option D, focus on capturing specific user scenarios or narratives to express requirements in a more user-centric and narrative format.

upvoted 2 times

🗨️ **Rabbitsfoot** 3 months ago

Selected Answer: D

I'm going with D. Stakeholders are interviewed and their stories are recorded as part of the requirements. It aligns with the description of the user stories approach as outlined in 10.48 BABOK V3. In the user stories approach, stakeholders' needs are captured through conversations or interviews, and their stories are recorded to define features of value to them. These recorded stories serve as the basis for identifying, prioritizing, estimating, and planning solutions. Therefore, option D accurately reflects the user stories approach for requirements organization.

upvoted 2 times

🗨️ **rnr29** 8 months, 3 weeks ago

Conversation 10.48. User stories help teams to explore and understand the feature described in the story and the value it will deliver to the stakeholder. The story itself doesn't capture everything there is to know about the stakeholder need and the information in the story is supplemented by further modelling as the story is delivered.

upvoted 2 times

Which of the following processes is used to make certain that the project team members are completing the project work according to the project plan?

- A. Project time management
- B. Project scope management
- C. Quality management plan
- D. Quality control

Suggested Answer: D

Community vote distribution

D (80%)

B (20%)

🗨️ **Nobita135** 3 weeks, 3 days ago

Selected Answer: D

Quality Control (QC) involves monitoring and measuring project deliverables to ensure they meet the defined quality standards and project requirements. It ensures that the project work is completed according to the project plan by identifying defects, recommending corrective actions, and verifying that deliverables conform to the project specifications.

upvoted 1 times

🗨️ **Farooq_95** 8 months, 1 week ago

Selected Answer: D

Not a BABOK v3 question. But in the context of BABOK v3, Quality Control seems to be appropriate option as Quality control involves monitoring specific project results to determine if they comply with relevant quality standards and identifying ways to eliminate causes of unsatisfactory performance.

Project Scope Management is not correct as it primarily involves deciding what is included and what is excluded from the project.

upvoted 1 times

🗨️ **Rabbitsfoot** 10 months ago

Selected Answer: D

Going with D - There isn't anything in the BABOK (as far as I could find) that addresses processes to use for output monitoring of the project team. It just states who the project team is and what is performed by them and that the PM is responsible for scope. Nothing on processes. The question also doesn't mention the PM at all. The only reference I could get in BABOK was in the glossary: pg 450 - Quality: The degree to which a set of inherent characteristics fulfills needs. Not a process though but, quality control would be.

upvoted 1 times

🗨️ **BMM_76** 10 months, 2 weeks ago

Selected Answer: B

Babok v3 pag 131: Project Manager: responsible for managing change and planning the detailed activities to complete a change. In a project, the project manager is responsible for the project scope, which covers all the work to be performed by the project team

upvoted 1 times

🗨️ **Rabbitsfoot** 10 months ago

Initial thoughts were the same... but question doesn't say anything about the PM.

upvoted 1 times

🗨️ **tehmama** 1 year, 1 month ago

C. Because quality control is a part of overall project quality management and focuses on identifying and addressing defects or deviations from the planned project work.

upvoted 1 times

🗨️ **OLasure** 3 years, 1 month ago

Selected Answer: D

The question said according to the project plan. Scope management plan focus on the scope of the project not budget, timeline etc Quality control on the other hand deals with every aspect of the project

upvoted 2 times

🗨️ 👤 **NickMane** 3 years, 4 months ago

I would go with D

upvoted 2 times

🗨️ 👤 **Samotaka** 3 years, 4 months ago

I think option B talks more about the coverage of the solution/project...but the question is about completion of work according to project plan...so i also think the right answer is D...quality control

upvoted 1 times

🗨️ 👤 **ekmode** 3 years, 5 months ago

I think the correct answer is option B (Project Scope Management) as it covers all the things that are done to plan a project and time (Deadline) is part of it.

upvoted 2 times

🗨️ 👤 **binu801** 3 years, 5 months ago

Can anyone explain why quality control is the right answer

upvoted 3 times

Which one of the following terms is not a business analysis planning and monitoring approach?

- A. Structured walkthroughs
- B. Decision analysis
- C. Requirements elicitation
- D. Process modeling

Suggested Answer: *C*

🗨️ **iconteduca** 6 months ago

From Babok 2 - p.23

Business Analysis Planning and Monitoring - Plan Business Analysis Approach
Techniques

- Decision Analysis (9.8): May be used to rate available methodologies against the organizational needs and objectives.
 - Process Modeling (9.21): Process Models can be used to define and document the business analysis approach.
 - Structured Walkthrough (9.30): This can be used as a means of validating a created, selected, or tailored business analysis approach.
- upvoted 2 times

🗨️ **Dillon91** 1 year, 5 months ago

C..A is part of conduct elicitation

upvoted 3 times

🗨️ **Nurialzard** 1 year, 9 months ago

Project Charters describes all of these, why it is not the answer
upvoted 12 times

CBAP_Exam Highly Voted 3 years ago

Selected Answer: A

All the things listed in question are included in Project Charter not Vision Statement.
upvoted 6 times

Nobita135 Most Recent 3 weeks, 3 days ago

Selected Answer: A

The Project Charter is a formal document that defines the business needs, identifies key stakeholders, and outlines the purpose and expected benefits of the project. It serves as the foundation for project planning by authorizing the project and providing high-level information, including:

- Business needs or problems the project intends to solve
- Key stakeholders and their roles
- Project objectives and expected benefits
- High-level project description and deliverables

This document ensures that everyone involved understands the project's purpose and intended outcomes.

upvoted 1 times

CBAPCohort6 2 months, 2 weeks ago

Selected Answer: D

Vision Statement
upvoted 1 times

Farooq_95 8 months, 2 weeks ago

Selected Answer: D

Vision Statement is correct as Vision Statement specifically focuses on articulating the business needs, identifying key stakeholders, and describing the positive impact or benefits that the solution will provide. It serves as a guiding document that aligns the project team and stakeholders toward a common understanding of the project's purpose and desired outcomes. Project Charter is not correct as it is a document issued by the project initiator or sponsor that formally authorizes the existence of a project and provides the project manager with the authority to apply organizational resources to project activities. (PMBOK v7). It is an approval document and not usually contain detailed information on project and its benefits. On the other hand, project vision statement, is a document that is a concise, high-level description of the project that states the purpose, and inspires the project team to contribute to the project. (PMBOK)

upvoted 1 times

Rfcuenca 11 months, 3 weeks ago

The solution is Vision Statement:

Babok v2 page 94

Project Charter word does not exist in V3. You have to answer what BABOK Says and not real-life experience.

upvoted 1 times

🗨️ **xiaoyangwu** 1 year, 3 months ago

I prefer A

upvoted 1 times

🗨️ **Atzewine** 1 year, 9 months ago

A problem or vision statement states the business need, identifies key stakeholders, and briefly describes the positive impact that meeting the business need will have on those stakeholders. (Babok V2 page 94).

In Babok V3, it is Change strategy.

The change strategy clearly describes the nature of the change in terms of:

- context of the change,
- identified alternative change strategies,
- justification for why a particular change strategy is the best approach,
- investment and resources required to work toward the future state,
- how the enterprise will realize value after the solution is delivered,
- key stakeholders in the change, and
- transition states along the way.

upvoted 1 times

🗨️ **Dillon91** 2 years, 1 month ago

Henry is the business analyst for the UUH Organization. Currently Henry is working on several work products as part of the requirements development process.

He may need to share these work products with the stakeholders.

Which of the following is not an example of a work product?

- A. Requirements documentation
- B. Interview questions and notes
- C. Meeting agendas and minutes
- D. Presentation slides

Suggested Answer: A

Community vote distribution

C (67%)

B (33%)

🗨️ **Nobita135** 1 week, 4 days ago

Selected Answer: C

The correct answer is:

C. Meeting agendas and minutes

Explanation:

Work products are outputs created as part of the business analysis process to document or support the development, communication, and management of requirements.

Examples of work products include:

- A. Requirements documentation: Core deliverable in requirements development.
- B. Interview questions and notes: Documentation used to elicit and record requirements.
- D. Presentation slides: Used to communicate requirements or findings to stakeholders.

C. Meeting agendas and minutes, while helpful for organizing and documenting discussions, are not directly part of the requirements development process. They are considered administrative tools rather than work products specifically tied to the requirements development process.

upvoted 1 times

🗨️ **CBAPCohort6** 2 months, 2 weeks ago

Selected Answer: C

Meeting agendas and minutes are typically not categorized as work products because they are more focused on the logistics of meetings rather than the analysis itself

upvoted 1 times

🗨️ **Farooq_95** 8 months, 1 week ago

Selected Answer: C

Meeting agenda and minutes are administrative document that document the discussions during the meetings. While they may be shared with stakeholders to provide transparency and updates on project activities, they are not direct outputs of the requirements development process and do not specifically relate to documenting or analyzing requirements.

BABOK v3 defines work product as a document or collection of notes or diagrams used by the business analyst during the requirements development process.

So, all of the other options can be used directly by BA to develop requirements. Although requirements documentation is an output of the requirements development process, it is still a work product as it encompasses the collection of documents, specifications, user stories, use cases, and other artifacts that the business analyst uses and develops throughout the requirements development process.

upvoted 2 times

🗨️ **Farooq_95** 8 months, 1 week ago

all options could be considered work products in a broad sense, "C. Meeting agendas and minutes" is the least directly related to the core activities of requirements development and analysis compared to the other options provided.

upvoted 1 times

🗨️ **Rabbitsfoot** 9 months, 1 week ago

Selected Answer: C

as below

upvoted 1 times

🗨️ **Rabbitsfoot** 9 months, 1 week ago

C. Meeting agendas and minutes.

Meeting agendas and minutes are artifacts related to the management of meetings and the documentation of discussions, decisions, and action items. While they may involve inputs from the business analyst and could contain information related to requirements discussions, they are not direct outputs of the requirements development process. Instead, they facilitate communication and coordination among stakeholders during meetings. Therefore, meeting agendas and minutes are not considered typical work products of the requirements development process.

v3 - pg 445: deliverable: Any unique and verifiable work product or service that a party has agreed to deliver.

pg 455: work product (business analysis): A document or collection of notes or diagrams used by the business analyst during the requirements development process.

Jane is the business analyst for her organization and she is completing passive observation to identify improvement opportunities in the workflow. She notices that some of the employees perform certain customer-facing activities in a different format than the other workers. Is this a problem that can be addressed as part of an improvement opportunity?

- A. It can be a problem as customers could become confused or frustrated because of the different approaches to the work.
- B. It is not a problem unless there is a drop in sales so it should be left alone.
- C. It can be a problem as the enterprise environmental factors always call for consistency in all processes.
- D. It is not a problem unless the customer complains. If Jane has not noticed the customers complaining then the process should be left along.

Suggested Answer: A

Community vote distribution

A (67%)

C (33%)

🗨️ **Nobita135** 3 weeks, 2 days ago

Selected Answer: A

Inconsistent customer-facing activities can lead to customer confusion, frustration, and even dissatisfaction. When different employees perform tasks in various ways, it can create mixed messages, unclear expectations, and uneven service quality. Standardizing processes where appropriate can improve customer experience, streamline operations, and reduce potential errors.

upvoted 2 times

🗨️ **CBAPCohort6** 2 months, 2 weeks ago

Selected Answer: A

A. It can be a problem as customers could become confused or frustrated because of the different approaches to the work.

Inconsistent processes, especially in customer-facing activities, can lead to confusion or frustration for customers. This issue can be addressed as part of an improvement opportunity to ensure consistency, efficiency, and a better customer experience. Standardizing workflows is often key to maintaining quality and avoiding potential issues, even if no immediate complaints have been made

upvoted 1 times

🗨️ **Dmylitos** 8 months, 4 weeks ago

Selected Answer: A

Consistency in customer-facing activities is essential to ensure a positive customer experience. If employees are using different formats for these activities, it may lead to confusion or frustration among customers, potentially impacting customer satisfaction and retention. Therefore, addressing this inconsistency is important as part of an improvement opportunity.

upvoted 2 times

🗨️ **Rabbitsfoot** 9 months, 1 week ago

Selected Answer: C

I think C. Lots of reference to consistency - BABOK v3: pg 154 - Some common examples of opportunities include:

- Increase Efficiencies: automate or simplify the work people perform by re-engineering or sharing processes, changing responsibilities, or outsourcing. Automation may also increase consistency of behaviour, reducing the likelihood of different stakeholders performing the same function in distinctly different fashions.

upvoted 2 times

🗨️ **Farooq_95** 9 months, 1 week ago

A is correct. Different approaches to work can be confusing to customers and can be a problem for organization. Under a proactive approach, one should not wait for problem to realize and face consequences e.g., drop in sales, customer complains, etc.

upvoted 3 times

You are the business analyst for your organization. A customer has approached your organization and is requesting that your company create new software for them that will help them collect customer information.

In regard to enterprise analysis this business needs stems from which one of the following need generation approaches?

- A. Bottom-up
- B. External drivers
- C. Middle management
- D. Top-down

Suggested Answer: B

🗨️ 👤 **Nobita135** 1 week, 4 days ago

Selected Answer: B

The correct answer is:

B. External drivers

Explanation:

When a business need originates from a customer request or external market demand, it is categorized as being driven by external drivers. In this scenario, the customer's request for new software to collect customer information represents an externally driven business need.

Here's a quick explanation of the other options:

- A. Bottom-up: Refers to needs generated from operational-level issues or suggestions (e.g., employees identifying inefficiencies in current systems).
- C. Middle management: Refers to needs originating from mid-level managers, often tied to improving team or departmental performance.
- D. Top-down: Refers to needs identified by executive leadership, typically aligned with strategic goals or organizational direction.

In this case, the source of the need is clearly external to the organization, making B. External drivers the correct choice.

 **ElyonSenjo** Highly Voted 2 years, 2 months ago

$N(N-1)/2$ where N is the number of stakeholders
upvoted 5 times

 **Rabbitsfoot** Most Recent 3 months ago

Selected Answer: C

The formula for calculating the number of communication channels is derived from the fact that in a group of (N) people, each person can potentially communicate with every other person except themselves. $435 \times (435 - 1) = 188,790$

When one person communicates with another, it creates a two-way channel - one from person A to person B and another from person B to person A. Hence, each pair of stakeholders adds two channels. However, when we calculate the total number of communication channels, each pair is counted twice (once for each stakeholder in the pair). Therefore, to avoid double-counting, we divide the result by 2. This ensures that each unique communication channel is counted only once. $188,790 / 2 = 94,395$

You are the business analyst for your organization and you are completing the verify requirements process. There are eight characteristics each requirement should have: cohesive, complete, consistent, correct, and feasible.
Which one of the following four is not a characteristic of a requirement?

- A. Functional
- B. Modifiable
- C. Unambiguous
- D. Testable

Suggested Answer: A

🗨️ **subha_CBAP** Highly Voted 3 years, 11 months ago

Atomic, Complete, Consistent, Concise, Feasible, Unambiguous, Testable, Prioritized, Understandable.. these are the Characteristics of Requirements and Designs Quality
upvoted 13 times

🗨️ **CBAPCohort6** Most Recent 2 months, 2 weeks ago

Selected Answer: A

"Functional" is not one of the eight key characteristics used to verify requirements. The characteristics of a good requirement include being cohesive, complete, consistent, correct, feasible, modifiable (flexible, adaptable), unambiguous, and testable. While "functional" refers to a type of requirement (functional vs. non-functional), it is not a characteristic used to verify the quality of a requirement.
upvoted 1 times

🗨️ **Inzaghi78** 9 months ago

B. Modifiable

While it's important for requirements to be flexible and adaptable, "modifiable" is not typically considered one of the characteristics of a requirement in the context of the verify requirements process. The characteristics of a requirement typically include being cohesive, complete, consistent, correct, feasible, functional, unambiguous, and testable. Therefore, option B is not a characteristic of a requirement.

You are the business analyst for your organization. You are preparing the business needs documentation for a new solution to an identified problem. Parts of your input for this process are the business goals and objectives set by your organization. What approach can you use to assess the business goal and their validity and longevity?

- A. Functional decomposition
- B. POLDAT
- C. SMART
- D. Root cause analysis

Suggested Answer: C

 **Dillon91** Highly Voted 6 months, 2 weeks ago

Specific: describing something that has an observable outcome,

- Measurable: tracking and measuring the outcome,
- Achievable: testing the feasibility of the effort,
- Relevant: aligning with the enterprise's vision, mission, and goals, and
- Time-bounded: defining a time frame that is consistent with the need.

upvoted 8 times

You are the business analyst for your organization and are working on organizing the identified requirements for a new solution. Nancy, your assistant in this process, says that these requirements aren't very complex. You agree but add that it's this thing that makes the overall solution complex.

What thing adds to the level of complexity among requirements?

- A. Relationships among the requirements
- B. Management in the project
- C. Stakeholders in the project
- D. Cost and schedule constraints

Suggested Answer: A

Community vote distribution

A (100%)

 **MFZZ** Highly Voted 2 years, 4 months ago

Relationships will always affect the prioritisation due to dependency, satisfy, derive, validate
upvoted 6 times

 **Farooq_95** Most Recent 2 months, 2 weeks ago

Selected Answer: A

Relationships among the requirements is correct answer. As per BABOK v3 3.4.4.1, business analysts are responsible for organizing business analysis information in a manner that allows for efficient access and use. Information must be well structured to ensure it is not difficult to locate, conflicts with other information, or is needlessly duplicated.

If requirements are not organized, the requirements and their relationships will be difficult to trace making the overall solution complex.
upvoted 1 times

Which of the following is an estimate based on past projects to predict the current cost and/or duration of the current project?

- A. Current estimate
- B. Past project cost
- C. Past estimate
- D. Top-down estimate

Suggested Answer: D

🗨️ **CBAPCohort6** 2 months, 2 weeks ago

Selected Answer: D

D. Top-down estimate

A top-down estimate is based on past projects to predict the current cost and/or duration of the current project. It uses high-level information from similar previous projects to estimate the overall cost and schedule
upvoted 1 times

🗨️ **Rfcuenca** 11 months, 3 weeks ago

Top-down: examining the components at a high level in a hierarchical breakdown.
upvoted 4 times

You are the business analyst for a large project for your organization. Your project has 65 stakeholders and this will greatly increase the complexity of the communication in this project. To demonstrate how complex this project and its communication will be, you show the management the number of communication channels in this project.

How many channels exist in this project based on the number of stakeholders?

- A. 2080
- B. 4160
- C. 4225
- D. 65

Suggested Answer: A

 **AdeCBAPcertified** 3 months ago

The number of stakeholders MINUS 1, multiply the result with the initially given number of stakeholders, and divide by 2= ANSWER. So $64 \times 65 = 4160 / 2 = 2080$

upvoted 1 times

 **Shreejith** 11 months, 4 weeks ago

No of Communication Channels = $N(N-1)/2$ where N is the number of stakeholder

upvoted 1 times

 **Wolfedale** 1 year, 3 months ago

A. Number of potential communication channels = $n \times (n-1)/2$. $65 \times (65-1)/2 = 65 \times 32 = 2080$

upvoted 2 times

You are creating a model for your requirements.

Which model type categorizes and describes the people who directly interact with a solution?

- A. Rules
- B. User classes, profiles, or roles
- C. Concepts and relationships
- D. Events

Suggested Answer: *B*

🗨️ 👤 **CBAPCohort6** 2 months, 2 weeks ago

Selected Answer: B

In the BABOK Guide, user classes, profiles, or roles are categorized under "People and Roles" as a model type that represents individuals or groups who interact with a solution. This model is used to specify roles and responsibilities and is essential for understanding how different users engage with a solution

You are the business analyst for the YGT Organization. You have just completed a capabilities gap assessment and have determined that your organization does not have the necessary resources and technology to seize a business opportunity. What is the most likely course of action for the organization?

- A. Hire additional resources.
- B. Launch a new project.
- C. Hire contractors to complete the project work.
- D. Move onto the next opportunity.

Suggested Answer: B

Community vote distribution

🗳️ 👤 **Nobita135** 3 weeks, 2 days ago

Selected Answer: B

When a capabilities gap assessment reveals that the organization lacks the necessary resources or technology to seize a business opportunity, launching a new project is typically the most appropriate course of action. A project can be initiated specifically to acquire or develop the required resources, technology, or capabilities needed to take advantage of the opportunity. This aligns with project management and business analysis best practices, where projects are often created to address identified gaps and achieve business objectives.

upvoted 1 times

🗳️ 👤 **CBAPCohort6** 2 months, 2 weeks ago

Selected Answer: B

B. Launch a new project.

After completing a capabilities gap assessment and identifying that the organization lacks the necessary resources and technology to seize a business opportunity, the most logical course of action is to launch a new project aimed at addressing those gaps. This could involve acquiring new resources, implementing new technology, or developing new capabilities necessary to capitalize on the opportunity.

upvoted 2 times

🗳️ 👤 **basmus12** 3 months ago

Selected Answer: B

Launch a new project

upvoted 1 times

🗳️ 👤 **Vishal_NZ** 5 months, 1 week ago

Question asks that the business is not capable of seizing any new opportunities. In this case we cannot hire just resources since its mentioned both technology and resources are needed.

Hiring contractors will just solve the 1 issue and its not feasible.

Moving on to next opportunity without having technology and resources is not a good idea.

Answer is B. Launching a new project to first make the organization cable with tech and resources.

upvoted 2 times

🗳️ 👤 **Atzewine** 1 year, 9 months ago

If the

enterprise can meet the need with the current state capabilities, then the change will likely be relatively small, or there may be no change at all. In any other case, a change strategy is needed to create the missing capabilities or improve the existing ones. (Babok Page 127)

New change strategy involves new business need, then new project. The answer is B. The answer can't be D because we are in define change strategy task. In this task we perform a gap analysis between current and future state, assesses options(opportunity) for achieving the future state, and we recommend the highest value approach for reaching the future state including any transition states that may be required along the way.(page 100)

upvoted 1 times

🗨️ 👤 **Bunlizlaw** 1 year, 5 months ago

So which option did you choose?

upvoted 1 times

🗨️ 👤 **Squib** 1 year, 11 months ago

Selected Answer: C

hire contractors and let them go after the deliverable is done

upvoted 3 times

🗨️ 👤 **Hong_i** 2 years, 3 months ago

B and D seems similar

upvoted 1 times

🗨️ 👤 **AnyU** 2 years, 11 months ago

Selected Answer: D

As per BABOK v3 pg 128/129 it depends on cost/benefits.

The net benefits of a future state may be very high, but if the investment is unbearable ("they just can't afford the change") the enterprise may pass on the opportunity, and invest in something else.

Mark is the business analyst for his organization. He is working with the solution development team and he believes that the team does not want to implement a certain portion of the requirements. The team is expressing the difficulty of the requirements and how it will be extremely challenging to complete. When Mark asks about a similar project that the team completed, they insist that this is a different type of requirements though Mark believes that it is not.

What is the solution development team appearing to do to the requirements?

- A. Change the prioritization of the requirements based on the past project.
- B. Change the prioritization of the requirements based on overstated complexity of the project work.
- C. Get the requirements removed from the project scope.
- D. Have the business analyst report the difficulty of the project work to the project customer.

Suggested Answer: B

Community vote distribution

C (100%)

🗨️ **Nobita135** 3 weeks, 2 days ago

Selected Answer: B

The solution development team appears to be overstating the complexity of the requirements to influence their prioritization or possibly to reduce their workload. By emphasizing difficulty, they may be attempting to delay, lower the priority of, or even avoid implementing those requirements. This behavior can be a tactic to manage workload, avoid challenging tasks, or shift focus to easier requirements.

upvoted 1 times

🗨️ **CBAPCohort6** 2 months, 2 weeks ago

Selected Answer: B

B. Change the prioritization of the requirements based on overstated complexity of the project work.

In this scenario, the solution development team appears to be emphasizing the difficulty and complexity of the current requirements, which may be a way to change the prioritization of those requirements based on their perceived challenges.

upvoted 1 times

🗨️ **basmus12** 2 months, 4 weeks ago

The correct answer is B.

In this scenario, the development team is likely exaggerating the complexity of the requirements in an attempt to influence the prioritization. By overstating the difficulty, the team may aim to deprioritize or delay working on those requirements, possibly to avoid or reduce the effort involved. This tactic could result in changes to how the requirements are handled, even if the actual complexity is manageable, as Mark suspects.

Option C (getting the requirements removed) could be a potential long-term goal, but in this context, the immediate action seems to be altering the prioritization rather than outright removal.

upvoted 2 times

🗨️ **basmus12** 2 months, 4 weeks ago

Also, they said it complex and challenging, but they didn't mention it's not feasible.

upvoted 2 times

🗨️ **BA1002** 5 months ago

Selected Answer: C

For me it s C option because the dev team express that it is complex to implement and they didn't mention that it will be better to postpone the implementation to another time

upvoted 1 times

Management would like you to front-load the requirements with the most risk requirements.

Why would management prefer the risky requirements first in the prioritization?

- A. So if the risk comes true the project will fail will little investment in the work.
- B. So if the risk comes true then the project manager can mitigate the risk event.
- C. So if the risk comes true they'll receive the reward as soon as possible.
- D. So if the risk comes true then there's ample time to correct the problem.

Suggested Answer: A

  **Nekdre** Highly Voted  2 years, 10 months ago

The requirement that is most difficult to implement may be prioritized to the top of the list in order to minimize the resources that are spent before learning that a proposed solution can not be delivered

upvoted 5 times

  **bolzify** Most Recent  2 weeks ago

Selected Answer: A

v3, 5.3.4.1, page 88. Risk: If there is a risk that the solution is not technically feasible, the requirement that is most difficult to implement may be prioritized to the top of the list in order to minimize the resources that are spent before learning that a proposed solution cannot be delivered. A proof of concept may be developed to establish that high risk options are possible.

upvoted 1 times

  **Nobita135** 3 weeks, 1 day ago

Selected Answer: A

Front-loading risky requirements means addressing the most uncertain or complex parts of the project early. This approach allows the organization to identify potential failures or insurmountable challenges early in the project lifecycle. If the risk materializes and the project is no longer viable, the organization can halt the project with minimal investment and resource expenditure, reducing sunk costs.

upvoted 1 times

  **CBAPCohort6** 2 months, 2 weeks ago

Selected Answer: D

D. So if the risk comes true then there's ample time to correct the problem.

Management prefers to address the requirements with the most risk first because it allows for early identification and mitigation of potential issues. This approach provides sufficient time to implement corrective measures before they can significantly impact the project's success.

upvoted 1 times

  **CBAPCohort6** 2 months, 2 weeks ago

If there is a risk that the solution is not technically feasible, the requirement that is most difficult to implement may be prioritized to the top of the list in order to minimize the resources that are spent before learning that a proposed solution cannot be delivered.... I think the answer is A

upvoted 1 times

  **SaintTC** 11 months ago

5.3.4 -If there is a risk that the solution is not technically feasible, the requirement that is most difficult to implement may be prioritized to the top of the list in order to minimize the resources that are spent before learning that a proposed solution cannot be delivered.

Selected Answer: C

• Rough Order of Magnitude (ROM): a high-level estimate, generally based on limited information, which may have a very wide confidence interval

upvoted 1 times

 **CBAPCohort6** 2 months, 2 weeks ago

Selected Answer: C

C. Rough order of magnitude cost estimating

This process involves estimating the costs of labor, materials, equipment, and facilities for the various proposed solutions to an identified problem. It is typically used in the early stages of project planning to provide a preliminary estimate of costs.

upvoted 1 times

 **basmus12** 2 months, 4 weeks ago

Selected Answer: C

In this scenario, it indicates an early and broad estimation, which aligns with ROM (Rough Order of magnitude) cost estimating.

- A. Cost budgeting happens later when a more detailed financial breakdown is needed.
- B. Expert judgment is a technique used in various stages, but it is not a cost estimation process in itself.
- D. Scoping the project costs is not a formal process term in project management.

upvoted 1 times

 **BA1002** 5 months ago

A. Cost budgeting

upvoted 1 times

 **flo16** 6 months, 3 weeks ago

C. Rough order of magnitude cost estimating

This type of cost estimation is typically performed early in the project to provide an approximate figure of the costs involved, often when there is limited information available about the project.

upvoted 1 times

 **Inzaghi78** 8 months, 4 weeks ago

A. Cost budgeting

The process of determining the cost of labor, materials, equipment, and facilities required to achieve different solutions proposed for an identified problem is known as cost budgeting. Cost budgeting involves estimating the costs associated with implementing the project scope, activities, and deliverables. This process helps in developing the project budget, which allocates resources to various project activities and components. Therefore, option A, cost budgeting, is the correct term for this process.

🗳️ **AlphaD** 2 months ago

C - Business Constraint. This constraint specifies a clear timeline for when the changes must be implemented, impacting the planning and execution of the project. While it could also be seen as a business constraint in a broader sense, it most directly relates to the schedule of activities.

upvoted 1 times

🗳️ **CBAPCohort6** 2 months, 2 weeks ago

Selected Answer: C

Business Constraint

upvoted 1 times

🗳️ **basmus12** 2 months, 4 weeks ago

As per BABOK v3, a schedule constraint limits the time frame within which tasks must be completed.

Here's why it's not the other options:

Technical constraints limit the design or construction based on technology, not time.

Business constraints usually refer to policies, budgets, or regulations, not timelines.

Assumptions are considered to be true but are not validated or explicitly stated as requirements, unlike constraints.

Therefore, the 60-day limit is a Schedule Constraint according to BABOK v3.

upvoted 1 times

🗳️ **Rabbitsfoot** 9 months, 1 week ago

Selected Answer: C

Question aligns more to BAPM than SA for me because it focuses on the process of identifying constraints and factors influencing the planning of BA activities.

The concept of time constraints aligns closely with the section discussing Complexity and Risk (3.1.4.5) in BABOK V3.

Also, in the given scenario, management's directive that the changes should not take more than 60 days to implement is more aligned with a business constraint because it reflects a business objective or requirement rather than a specific schedule constraint.

Babok v2 page 112

upvoted 1 times

🗨️ 👤 **Atzewine** 1 year, 9 months ago

Selected Answer: B

We are un define change strategy task.

Constraints describe aspects of the current state, aspects of the planned future state that may not be changed by the solution, or mandatory elements of the design. They must be carefully examined to ensure that they are accurate and justified.

Constraints may reflect any of the following:

- budgetary restrictions,
- time restrictions,
- technology,
- infrastructure,
- policies,
- limits on the number of resources available,
- restrictions based on the skills of the team and stakeholders,
- a requirement that certain stakeholders not be affected by the implementation of the solution,
- compliance with regulations, and
- any other restriction.

Project Manager: responsible for managing change and planning the detailed activities to complete a change. In a project, the project manager is responsible for the project scope, which covers all the work to be performed by the project team.

BABOK v3. p. 131

upvoted 2 times

You are the business analyst for a large project that will create new software for the entire organization. This new software will affect all of the administrative assistants in the organization schedule meetings, reserve facilities, and share calendars. There are approximately 2,400 administrative assistants in your organization and not all of these people can attend requirements gathering workshops. What approach can you use to manage and gather requirements from these 2,400 administrative assistants?

- A. You can meet with a small group of administrative assistants and assume their requirements are reflective of the remaining group of administrative assistants.
- B. You will need to meet with all of the administrative assistants as part requirements elicitation.
- C. You can meet with a small group of administrative assistants that will serve as representatives for the remaining administrative assistants.
- D. You can meet with the administrative assistants' managers.

Suggested Answer: C

C: because... "and not all of these people can attend requirements gathering workshops"
upvoted 1 times

  **binu801** 3 years, 5 months ago

Answer is C not A because a is assuming that the stakeholders present in the workshop are reflective of the others where in C, the stakeholders who are present will represent the need of those who arent available.
upvoted 4 times

Enterprise analysis provides many things for an organization.

All of the following are tasks included in enterprise analysis except for which one?

- A. Determine solution approach
- B. Define business need
- C. Assess capability gaps
- D. Solution performance assessment

Suggested Answer: *D*

  **km_45** Highly Voted  1 year, 5 months ago

This is from BABOK v2, not v3: there is no Enterprise analysis, it is replaced by Strategy Analysis
upvoted 5 times

  **MFZZ** Most Recent  4 months, 4 weeks ago

Answer is correct. Solution performance assessment (although not the correct term) would be related to Solution Evaluation
upvoted 1 times

Gina has been asked to provide decision analysis for her solution scope.
Which one of the following best describes the decision analysis technique?

- A. Assessed to support benefit management, measurement, and reporting.
- B. Used to assess potential risks that may impact the solution and the cost and benefits associated with it.
- C. Forecasts the size of the investment required to deploy and operate the proposed solution.
- D. Cost-benefit analysis compares the cost of implementing a solution against the benefits gained. Financial analysis includes the use of financial models that estimate the market value of an organizational asset.

Suggested Answer: D

Community vote distribution

B (50%)

D (50%)

🗨️ **Nobita135** 3 weeks, 1 day ago

Selected Answer: D

Decision analysis involves evaluating different options using financial and non-financial criteria to determine the best course of action. This often includes techniques such as cost-benefit analysis, financial modeling, and assessing return on investment (ROI). The goal is to support decision-making by comparing costs, benefits, and risks of proposed solutions, making Option D the best description of the decision analysis technique.
upvoted 1 times

🗨️ **CBAPCohort6** 2 months, 2 weeks ago

Selected Answer: B

B. Used to assess potential risks that may impact the solution and the cost and benefits associated with it.
upvoted 1 times

🗨️ **Farooq_95** 8 months, 1 week ago

Selected Answer: B

As per BABOK v3 10.16.1, Decision analysis formally assesses a problem and possible decisions in order to determine the value of alternate outcomes under conditions of uncertainty.
As option B assess the potential risks that may impact the solution, hence it is correct.
upvoted 1 times

🗨️ **Farooq_95** 8 months, 1 week ago

D is an element of Financial Analysis (BABOK v3 10.20.3.4), not decision analysis.

  **qebzyoao** 2 years, 1 month ago

It is actually a direct quote from the definition of decision analysis in babok v2. That's the only way this makes sense.

This is one of those questions that you would be better off ignoring as far as v3 is concerned.

upvoted 2 times

You are the business analyst for your organization and are working with Ralph who is also a business analyst at your company. You have moved one of the requirements higher in the prioritization of the requirements because it is needed to be implemented before some of the more important requirements are done.

Ralph disagrees with your placement of the requirement because you are to rank the requirements based on their level of difficulty. Who is correct and why?

- A. Ralph is correct because the requirements are always to be ranked by importance or business value.
- B. You are correct because the lower priority requirements must be completed before the higher priority requirements can be done.
- C. You are correct because you are the senior business analyst.
- D. Ralph is correct because the sequence of requirements is actually done with the project activity list.

Suggested Answer: B

Community vote distribution

B (100%)

 **mountaingoat** Highly Voted 3 years, 5 months ago

A is the right answer
upvoted 9 times

 **QE** 3 years, 4 months ago

Could you please explain why A is the right answer? This seem like the higher requirements depends on the lower requirements, thus they have to be implemented. Page 82.
upvoted 4 times

 **Ray81** Highly Voted 3 years, 3 months ago

B cannot be correct, because order of priority means that requirements with higher priority should be implemented first, not the other way round
upvoted 5 times

 **Nekdre** 2 years, 4 months ago

I agree the lower priority ones can't be done first, higher priorities are done first so I will choose A because priority is more on the business value
upvoted 2 times

 **Nobita135** Most Recent 3 weeks ago

Selected Answer: B

In requirements prioritization, dependencies between requirements play a critical role. If a lower-priority requirement must be implemented first to enable a higher-priority requirement, the lower-priority requirement's implementation order should be adjusted accordingly. This ensures that the project progresses logically and avoids technical or functional blockers.
upvoted 1 times

 **Farooq_95** 2 months, 1 week ago

Selected Answer: B

"You are correct because the lower priority requirements must be completed before the higher priority requirements can be done. This is because in the given scenario, the low priority requirements are a dependency for high priority requirements.
Ralph's approach is based on cost (i.e., difficulty in implementation) and not business value or importance. Also, even if Ralph's approach aligns with business value, the dependency factor matters more compared to business value or importance. It is because a high priority requirement with a high business value who is dependent on a low priority requirement with low business value needs to be implemented after the low priority requirement"
upvoted 2 times

 **SaintTC** 4 months, 4 weeks ago

Answer A - 5.3.2
upvoted 1 times

 **csg2023** 5 months ago

B is correct. The higher priority requirement depends on the lower one hence the lower one has to be implemented first
upvoted 2 times

🗨️ 👤 **Rfcuenca** 5 months, 2 weeks ago

Option B

Dependencies between requirements: Some capabilities may in and of themselves provide limited value to the organization, but need to be delivered in order to support other high-value requirements.

Selected Answer: B

Higher difficulty requirement is dependent on the lower difficulty one.

upvoted 1 times

🗨️ 👤 **Sha7rou** 1 year, 9 months ago

Answer is B, but the funny thing here is that the question shows that the BAs cant understand each other.

it is clear that higher req depends on the lower req so the lower should go first.

upvoted 2 times

🗨️ 👤 **cake12345** 2 years ago

The ranking of the requirements based on their level of difficulty is fine, but you may also include a requirement's relationship to other requirements. If higher priority requirements cannot be completed until the lower priority requirements are done, then the requirements should be ordered as such for the order of implementation.

upvoted 1 times

🗨️ 👤 **Spartanxxv** 2 years, 2 months ago

Selected Answer: B

The higher priority requirement is dependent on the lower priority requirement.

upvoted 3 times

🗨️ 👤 **OlivierPaudex** 2 years, 3 months ago

I think answer B is correct.

We are talking about a requirement you moved in a higher position, to be implemented first. The lower requirement (the requirement you just moved to a higher position) should be done first.

Question is a bit confusing cause it says that Ralph is disagree and you have to explain him that you move a lower requirement to an higher position, so that it can be done first.

High requirements are done first and that is exactly what you have done by moving a low priority to high.

upvoted 3 times

🗨️ 👤 **SamiAbuQurs** 2 years, 6 months ago

Answer is B since "Dependencies" is one of the factors that influence prioritization. BABOK v3 : Prioritize Requirements 5.3.4

upvoted 3 times

There are four inputs to writing the business case as part of enterprise analysis.
Which one of the following is not an input to writing the business case process?

- A. Business need
- B. Assumptions and constraints
- C. Requirements verification
- D. Stakeholder concerns

Suggested Answer: C

Community vote distribution

C (100%)

🗨️ **Farooq_95** 2 months, 1 week ago

Selected Answer: C

Business cases requires formal input of Business needs, Assumptions & constraints and informally the stakeholder concerns. Requirements verification is required after business case is written and is needed before proceeding to assess solution alternatives.

Martha is observing Sarah complete several complex steps as part of her business analysis requirements elicitation process. In this instance Martha working alongside Sarah is actually helping Sarah complete the work so that Martha can understand all of the steps Sarah must complete.

What type of requirements elicitation technique is Martha using?

- A. Progressive elaboration
- B. Shadowing
- C. Cross training requirements elicitation
- D. Active observation

Suggested Answer: D

Community vote distribution

D (50%)

C (50%)

🗨️ **Nobita135** 3 weeks ago

Selected Answer: D

Active observation involves the observer (Martha) not only watching but also participating in the task or process to gain a deeper understanding of the steps involved. By helping Sarah complete the work, Martha is engaging directly, making this active observation rather than passive observation, where she would simply watch without interaction.

upvoted 1 times

🗨️ **Georgian1994** 5 months ago

Selected Answer: D

"There are two basic approaches for observation: Active/Noticeable : (...) A variation of this method may involve even stronger intervention into actors' activities by stimulating them to perform specific tasks." (BABOK V3 pg 306). If Martha is involved in doing specific tasks, then she is an actor and is practicing active observation. Answer is D

upvoted 2 times

🗨️ **Sheyibass** 1 year, 1 month ago

Selected Answer: C

Can someone please explain why the answer is not C? Matha was practically helping Sara do the job. That is no longer an 'observation' in my opinion. Eager to know what other people think

upvoted 1 times

You are the business analyst for THY Organization and you have gathered the requirements. You have presented the requirements to the stakeholders and they have approved your requirements.

You are now working with Francie on recording the dependencies and relationships for each of the requirements.

Why would you want to record the dependencies and relationships for the requirements?

- A. To help determine the sequence in which requirements are to be addressed.
- B. To help determine which requirements carry the most risk.
- C. To help determine the total cost for the solution to be implemented.
- D. To help determine the total time for the solution to be implemented.

Suggested Answer: A

  **Farooq_95** 3 months, 1 week ago

A is correct because the sequence in which requirements need to be addressed is important to work upon. If this sequence is missing, the requirements will be implemented in a haphazard manner leading to time delays and failures.

upvoted 1 times

As part of the requirements analysis a business analyst can use the same tools and techniques to model the current state of an organization. All of the following are valid reasons why would a business analyst want to create a current state domain model except for which one?

- A. The current state model can help identify opportunities for improvement.
- B. The current state model can help validate the solution scope with business and technical stakeholders.
- C. The current state model can help the business analyst create Pareto charts for process improvement.
- D. The current state model can help assist stakeholders in understanding the current state

Suggested Answer: C

Community vote distribution

C (100%)

🗨️ **Nobita135** 3 weeks ago

Selected Answer: C

A current state domain model is used to represent the existing processes, systems, and data flows within an organization. While it helps identify improvement opportunities, validate the solution scope, and assist stakeholders in understanding the current environment, creating Pareto charts is not directly related to domain modeling.

Pareto charts are a specific data analysis tool used for identifying the most significant factors contributing to problems, typically based on frequency or impact. They focus on root cause analysis rather than mapping the current state of an organization. Therefore, this option does not align with the purpose of a current state domain model.

upvoted 1 times

🗨️ **Farooq_95** 2 months, 1 week ago

Selected Answer: C

Pareto charts are a specific type of graphical analysis tool used to prioritize and identify the most significant factors contributing to a problem or issue. While they can be valuable for analyzing and visualizing data related to process improvement initiatives, creating Pareto charts is not a direct function of a current state domain model.

BABOK v3 6.1.1 defines purpose of Analyze Current State as to understand the reasons why an enterprise needs to change some aspect of how it operates and what would be

directly or indirectly affected by the change. All of the other options align with "Why" part of analyze current state.

You are the business analyst for your organization. Management has asked you to create a plan that will define the proposed structure and schedule for communicating the business analysis activities to the appropriate stakeholders.

What plan does management want you to create?

- A. Business Analysis Plan
- B. Business Analysis Communications Plan
- C. Communications management plan
- D. Stakeholder Management Plan

Suggested Answer: B

Community vote distribution

B (100%)

 **Nobita135** 3 weeks ago

Selected Answer: B

The Business Analysis Communications Plan defines how and when business analysis activities, progress, and results will be communicated to stakeholders. It outlines the communication structure, frequency, delivery methods, and responsible parties, ensuring that all stakeholders are informed throughout the business analysis process. This matches the description of what management requested.

Why the Other Options Are Incorrect:

• A. Business Analysis Plan:

The Business Analysis Plan outlines how business analysis work will be performed, including the tasks, techniques, and resources needed. It is broader and focuses on managing the entire business analysis process, not just communication.

upvoted 1 times

The RGQ Organization utilizes a change log.

What is a change log?

- A. It is a document that records all change requests for the project.
- B. It is a document that tracks all unauthorized changes to the project solution.
- C. It is a document that tracks all characteristics and status of changes that have been received.
- D. It is a document that tracks the changes that have been received, including their implementation to the project solution.

Suggested Answer: C

🗨️ 👤 **Syedusama** 1 month, 1 week ago

Correct..baokpg. 18

upvoted 1 times

It's often impossible or difficult to prove that the implementation of a solution will change the current state of an organization to the desired future state. The business analyst must document the characteristics and risk of the implementation of a solution in case the belief that the solution will achieve the desired results will prove invalid.

What is the belief that the solution will create the desired effect for the organization called?

- A. Project
- B. Risk
- C. Assumption
- D. Model

Suggested Answer: C

Community vote distribution

C (100%)

 **Nobita135** 3 weeks ago

Selected Answer: C

An Assumption is something believed to be true or expected to occur without definitive proof. In the context of business analysis, the assumption is that the implementation of a solution will achieve the desired future state. Since this cannot be guaranteed, the business analyst must document these assumptions along with associated risks in case the expected outcomes are not realized.

upvoted 1 times

You are preparing the business case for a proposed solution in your organization. You need to identify several components for the business case including an assessment of the risks the solution may contain.

Which one of the following is the best definition of a risk as it pertains to the business case?

- A. Risk is an uncertain event or condition that may have both positive and negative affects on the solution.
- B. Risk is an uncertain event that can cause the organization to lose more monies than it invests in the solution.
- C. Risk is a potential event that can cause the solution to fail.
- D. Risks are threats to the organization's success.

Suggested Answer: A

Community vote distribution

A (60%)

C (40%)

🗨️ **Nobita135** 3 weeks ago

Selected Answer: A

In business analysis and project management, a risk is defined as an uncertain event or condition that, if it occurs, can have either a positive (opportunity) or negative (threat) effect on the project's objectives, including its cost, scope, timeline, or quality. When preparing a business case, assessing both types of risks helps ensure comprehensive planning and decision-making.

upvoted 1 times

🗨️ **Farooq_95** 2 months ago

Selected Answer: A

BABOK v3 10.7.3.3 defines Risk in context of Business case as "Risks are potential problems that may have a negative impact on the solution". Hence, A is correct.

Risks may have positive impacts on solution as well but BABOK specifically uses terminology 'Risk' in terms of negative impact and term 'opportunities' for positive impact. (Refer BABOK v3 6.3.2 important note)

But, C is incorrect because a risk includes all uncertain events that can have negative impact on the solution including failure but does not only include events that can cause failure.

upvoted 3 times

🗨️ **Ngbo** 5 months, 3 weeks ago

I go with C. This is because the question specifically mentioned as it pertains to ' Business Case' 10.7.3.3. The 3rd bullet point.

Which of the following inputs of Monitor and Control Risks acquires information from performance measurements and evaluates it to provide variance analysis and forecasting?

- A. Risk register
- B. Work performance information
- C. Performance report
- D. Project management plan

Suggested Answer: C

Community vote distribution

B (100%)

🗨️ **Nobita135** 3 weeks ago

Selected Answer: B

Work performance information includes data gathered from performance measurements, such as project progress, status reports, and key performance indicators (KPIs). This information is evaluated to provide variance analysis, trend analysis, and forecasting in the "Monitor and Control Risks" process. It helps assess how well the project is performing compared to the plan and whether risks are materializing as expected.

upvoted 1 times

🗨️ **Inzaghi78** 2 months, 3 weeks ago

Selected Answer: B

B. Work performance information

In the Monitor and Control Risks process, work performance information is the input that acquires information from performance measurements and evaluates it to provide variance analysis and forecasting. This information helps assess the current status of risks, monitor their progress, and identify any emerging risks or changes in risk conditions. Therefore, option B is the correct choice.

upvoted 2 times

You are the business analyst for your organization and are trying to determine the best solution for an identified problem. You have determined that you could create a software solution using inhouse resources for \$65,000 and with an ongoing support of \$5,600 per month. A vendor offers you a quote that they can create the software for \$49,000 with an ongoing support of \$6,100 per month. Which solution should you choose?

- A. Create the software if you'll keep the solution less than 32 months.
- B. Create the software if you'll use the solution longer than 32 months.
- C. There is not enough information to determine which solution is financially better.
- D. Buy from the vendor if you'll keep the solution longer than 32 months.

Suggested Answer: B

🗨️ **MylesD** 1 month, 3 weeks ago

$65000 + (5600 * N) = 49000 + (6100 * N)$,
 $65000 - 49000 = 6100N - 5600N$,
 $16000 = 500N$, $N = 32$

Option B is correct as you should use the solution longer than the pay back period.

upvoted 1 times

🗨️ **Ray81** 1 year, 9 months ago

Can someone please explain how they got this answer?

upvoted 1 times

🗨️ **Qualms** 1 year, 9 months ago

First, you have to calculate the time (N) at which the total cost of ownership for both solution approaches will be equal,

$65000 + (5600 * N) = 49000 + (6100 * N)$,
 $65000 - 49000 = 6100N - 5600N$,
 $16000 = 500N$, $N = 32$.

Because the maintenance cost for create is \$5600 and the maintenance cost for purchase is \$6100, then it means that after 32months, we will incur less maintenance cost on the create option. Hence, Option B is correct.

All of the following are techniques that can be used to specify or model requirements except for which one?

- A. Organization modeling
- B. Data modeling
- C. Work breakdown structure creation
- D. State diagrams

Suggested Answer: C

Community vote distribution

C (100%)

 **Nobita135** 1 week, 3 days ago

Selected Answer: C

The correct answer is:

C. Work breakdown structure creation

Explanation:

The techniques used to specify or model requirements are designed to define, analyze, and represent requirements in detail. According to BABOK Guide v3, the following techniques are used for specifying or modeling requirements:

1. Organization modeling (Option A): Used to represent roles, responsibilities, and relationships within an organization.
2. Data modeling (Option B): Describes the structure, relationships, and usage of data within the solution.
3. State diagrams (Option D): Represent the various states an entity can have and the transitions between these states.

Work breakdown structure (WBS) creation (Option C), however, is a project management tool used to break down a project into smaller, manageable components. While it aids in project planning and execution, it is not used to specify or model requirements. Therefore, it is not applicable to this context.

upvoted 1 times

You are the business analyst for a large project in your organization. You are working with Ben to create requirements packages to present to the stakeholders, the business analyst team, and to the project manager. Ben wants to know why you're creating requirements packages. What's the primary goal of developing a requirements package?

- A. To convey the cost, schedule, and risk information clearly
- B. To convey information clearly and in an understandable fashion
- C. To present the requirements in packages that are easy for the project team to accomplish in their project execution
- D. To help the project manager create the work breakdown structure

You are the business analyst for your organization and you are working with Bill on creating a model. Bill is a little confused about all the different things a model can do for the stakeholders.

You explain to Bill that a model can do all of the following except for which one?

- A. Define the risk and reward for the requirements
- B. Categorize and create hierarchies of items
- C. Define boundaries for business domains
- D. Show business logic

Suggested Answer: A

  **Rfcuenca** 5 months, 2 weeks ago

Option A

Babok v2 Page 109

upvoted 1 times

You are the business analyst for a new project. Part of this project is for the project team to manually install new workstations through the company's campus.

Based on your research you have determined that the project team can install 25 new workstations per hour. Since there is a fixed amount of time that these workstations need to be installed you are considering adding additional labor for the implementation. You are also considering to adjust the prioritization of the project requirements based on the amount of workstations the project team can install per hour. What does the 25 workstations per hour represent in this scenario?

- A. Timeboxing
- B. Planning
- C. Parametric estimate
- D. Report project

Suggested Answer: A

Community vote distribution

A (67%) C (33%)

🗨️ **Nobita135** 3 weeks ago

Selected Answer: C

A parametric estimate involves using historical data or measurable factors to calculate project metrics, such as cost or time. In this scenario, the rate of 25 workstations per hour is a parametric estimate because it uses a known productivity rate to estimate how long it will take to complete the task. This allows the business analyst to make decisions about adding labor or adjusting priorities based on the installation rate.

Why the Other Options Are Incorrect:

- A. Timeboxing: This refers to setting a fixed amount of time to complete a specific task or deliverable, regardless of scope. In this case, the fixed rate of workstations per hour is not about limiting time but about estimating effort.

upvoted 1 times

🗨️ **Farooq_95** 2 months, 2 weeks ago

Selected Answer: A

Timeboxing is correct because 25 workstations per hour represents prioritizing based on allocation of time resources. Parametric estimate is not correct as it is not a defined prioritizing approach as defined in BABOK v3 10.33.2. The BABOK defined approaches for prioritizing includes: 1) Grouping 2) Ranking 3) Time Boxing / Budgeting 4) Negotiation

upvoted 2 times

🗨️ **Rabbitsfoot** 3 months ago

Selected Answer: A

Timeboxing involves allocating a fixed amount of time to complete a specific task or set of tasks. In this scenario, the requirement to install 25 workstations per hour sets a time constraint on the installation process. Therefore, the 25 workstations per hour represents the time constraint imposed on the project, making "Timeboxing" the appropriate answer.

see v3 pg 313 .3

upvoted 2 times

🗨️ **jeffreyokonkwo_** 4 months, 2 weeks ago

C. Parametric estimate

In this scenario, the estimate of installing 25 new workstations per hour is an example of a parametric estimate. A parametric estimate involves using statistical relationships, historical data, or other quantitative methods to estimate project parameters based on specific variables. In this case, the parameter being estimated is the installation rate of new workstations, and the estimate is based on the rate of 25 workstations per hour. Adjusting the labor and prioritizing requirements based on this estimate is a strategic approach to manage the installation process efficiently.

upvoted 1 times

🗨️ **Ianrelanreoo** 2 years, 2 months ago

the correct answer is time boxing, the question talked about a prioritization

upvoted 1 times

🗨️ 👤 **Spartanxxv** 2 years, 2 months ago

Selected Answer: A

Emphasis is on the fixed amount of time and the adjustment to the priority. That is why I will go with Timeboxing. Timeboxing or budgeting prioritizes business analysis information based on the allocation of a fixed resource.

upvoted 2 times

🗨️ 👤 **SamiAbuQurs** 2 years, 6 months ago

correct answer is Time Boxing. BABOK v3: 10.33.3; Time Boxing/Budgeting

upvoted 1 times

🗨️ 👤 **CBAP_Exam** 2 years, 6 months ago

Selected Answer: C

Timeboxing/Budgeting is an approach used when there is time or money constraint. Here 25 workstations is an attribute being estimated. It reflects the skills and abilities required to do the work. So according to me the answer is clearly 'Parametric Estimation'

upvoted 3 times

🗨️ 👤 **CBAP_Exam** 2 years, 6 months ago

Never mind, if we are taking about the fixed 1 hour time required to install 25 workstations then the answer 'Timeboxing' is correct.

upvoted 1 times

🗨️ 👤 **rebelng** 2 years, 9 months ago

I believe the correct answer is 'Parametric Estimate'

upvoted 2 times

You are the business analyst for your organization. As part of the requirements prioritization you have given each key stakeholder \$10,000 in play money to distribute among the identified requirements. Each stakeholder can assign their play money to any of the requirements, but the requirements will be prioritized based on the value of the play money assigned to each requirement.

What type of requirements prioritization is happening in this scenario?

- A. Resource leveling
- B. Confirmation management
- C. Utility function
- D. Voting

Suggested Answer: *D*

Community vote distribution

D (100%)

 **Nobita135** 3 weeks ago

Selected Answer: D

This scenario describes a Voting technique, specifically a type known as "Cumulative Voting" or "Dollar Voting." In this method, stakeholders are given a fixed amount of resources (in this case, play money) to allocate to different requirements based on their perceived importance or value. The requirements that receive the most "money" are considered the highest priority.

upvoted 1 times

You are the business analyst for your organization. You have identified the costs and level of effort needed for each of the solution components. Management has asked that you also assess the most effective tradeoffs between delivery options. You consider the available resources and the constraints on the solution to determine if an additional investment is justified to realize a higher value for the solution. What other consideration could you include in your assessment of the solution?

- A. Historical information
- B. Dependencies between requirements
- C. Experience of the implementation team
- D. Enterprise environmental factors

Suggested Answer: B

Community vote distribution

D (100%)

 **MFZZ** Highly Voted 2 years, 5 months ago

As the BA has been requested to assess the trade-offs of the solution relationships they will need to assess the dependencies between requirements where one requirement cannot be fulfilled unless the other requirement is fulfilled.(5.3.4 Dependencies)
upvoted 5 times

 **Nobita135** Most Recent 3 weeks ago

Selected Answer: B

B. Dependencies between requirements

When assessing the most effective tradeoffs between delivery options, considering dependencies between requirements is crucial. Some requirements may be dependent on the completion of others, meaning their implementation order could affect costs, timelines, and overall project success. By evaluating these dependencies, you can determine the most efficient sequencing and resource allocation.

This concept is tied to BABOK v3, Chapter 3: Business Analysis Planning and Monitoring, where the Communications Management Plan is discussed as a key part of planning business analysis activities, including how communications are managed and documented.

upvoted 1 times

🗨️ **Farooq_95** 8 months, 2 weeks ago

Selected Answer: C

Correct answer is communications management plan will dictate what will happen to the business analysis communications. As per BABOK v3 3.2.4.3, Communication considerations can be documented in the form of a stakeholder communication plan. Business analysts build and review communication plans with stakeholders to ensure their communication requirements and expectations are met.

upvoted 1 times

🗨️ **Inzaghi78** 8 months, 4 weeks ago

The correct answer is C. The communications management plan will dictate what will happen to the business analysis communications

upvoted 2 times

🗨️ **binu801** 3 years, 5 months ago

Answer explanation- nothing is destroyed, there is no role as solution project manager in BABOK, C is incorrect as its asking what to do with Comms plan , not whats its purpose. D is correct as all these records are stored and archived for future references

upvoted 4 times

You are the business analyst for your organization and are currently with several key stakeholders as part of the determination of which business analysis approach is most appropriate for the current project.

Which one of the following is not a stakeholder that is considered when completing the business analysis planning and monitoring task to determine a business analysis approach?

- A. Tester
- B. Project manager
- C. Regulator
- D. Functional management

Suggested Answer: D

  **km_45** Highly Voted 1 year, 5 months ago

According to BABOK v3: DSME, PM, Regulator and Sponsor are the only stakeholders for this task.

Tester is the wrong answer as well

upvoted 10 times

  **RoseBeat** 12 months ago

According to BABOK V3. The generic list of stakeholders includes the following roles:

- business analyst,
 - customer,
 - domain subject matter expert,
 - end user,
 - implementation subject matter expert,
- Business Analyst
- operational support,
 - project manager,
 - regulator,
 - sponsor,
 - supplier, and
 - tester

upvoted 6 times

  **binu801** 11 months, 3 weeks ago

I would go with tester as functional management can be considered a domain subject matter expert

upvoted 2 times

  **OlivierPaudex** Most Recent 3 months, 2 weeks ago

functional management is the most common type of organizational management, not a stakeholder

Tester is also a type of stakeholder that has nothing to do with the BAPM.

I will going with answer D.

upvoted 1 times

  **Sty8** 4 months, 1 week ago

There is no stakeholder called functional management

upvoted 1 times

  **Justjem** 11 months, 2 weeks ago

I would go with tester as well, as it is not part of the listed stakeholders for business analysis planning and monitoring phase

upvoted 1 times

  **Nekdre** 4 months, 3 weeks ago

Tester is not listed

upvoted 1 times

Bob and Susan are business analysts for their organization. They are examining two materials that could be used in an upcoming project. They are testing the materials and measuring the results of each test to compare the materials to each other. This process will help Bob and Susan determine which material is best for their upcoming project.

What type of process are Bob and Susan completing with these materials?

- A. Feasibility study
- B. Stress test
- C. Alternative identification
- D. Benchmarking

Suggested Answer: D

  **km_45** Highly Voted 2 years, 5 months ago

I don't understand, how this is Benchmarking. It looks like feasibility study to me: An evaluation of proposed alternatives to determine if they are technically, organizationally, and economically possible within the constraints of the enterprise, and whether they will deliver the desired benefits to the enterprise.

upvoted 13 times

  **BirdCatcher** 2 years, 1 month ago

This is rather about a comparison of the two materials and determining which one is best. Benchmarking is a comparison.

upvoted 5 times

  **binu801** 1 year, 11 months ago

Benchmarking is essentially a comparison against an established standards or best in the class. as none of the other options are closer, Benchmarking is the nearest to the correct answer.

upvoted 2 times

  **Dillon91** Most Recent 5 months, 1 week ago

A. Comparing alternatives. Not standards

upvoted 1 times

  **timojeaga** 1 year, 11 months ago

Benchmarking is correct. Both are comparison tools but in this case they are comparing materials side by side.

upvoted 2 times

You are the business analyst for your organization. You are working with several IT professionals to determine all of the connected systems in your organization.

You are creating a mapping of the servers, workstations, printers, and other connected devices and their purposes for an analysis of how information is input, processed, stored, and output from each system.

What business analysis process are you completing?

- A. Networking topology mapping
- B. Data dictionary and glossary creation
- C. Data flow diagram
- D. Prototype

Suggested Answer: C

  **Saira** Highly Voted 11 months ago

BABOK v3 10.13.2: Physical data flow diagrams model all of the data stores, printers, forms, devices, and other manifestations of data. The physical diagram can show either the current state or how it will be implemented.

upvoted 9 times

  **binu801** Most Recent 5 months, 3 weeks ago

network topology diagram shows how different devices are connected within a network for example mesh, ring, star, Bus and hybrid. However network topology diagram is not a term used in BABOK. hence DFD is the right answer

upvoted 3 times

Which of the following is a quality control chart to track trends in project execution?

- A. Control chart
- B. RACI chart
- C. PERT chart
- D. Pareto chart

Suggested Answer: A

🗨️ **km_45** Highly Voted 11 months, 2 weeks ago

Should be D - Pareto chart:

Control charts, also known as Shewhart charts or process-behavior charts, are a statistical process control tool used to determine if a manufacturing or business process is in a state of control. It is more appropriate to say that the control charts are the graphical device for Statistical Process Monitoring

A Pareto chart is a basic quality tool that helps you identify the most frequent defects, complaints or any other factor you can count and categorize

upvoted 7 times

🗨️ **binu801** 5 months, 3 weeks ago

no, control chart is used to see actual performance against the target. paretp is 80/20 principle used to identify key factors or variables .

Hence control chart is right answer

upvoted 1 times

🗨️ **Nobita135** Most Recent 2 weeks, 6 days ago

Selected Answer: A

A Control Chart is a quality control tool used to track trends, variations, and performance over time in project execution. It helps monitor whether a process is stable and within predefined control limits. If data points fall outside these limits or display certain patterns, it signals potential issues that need corrective action.

upvoted 1 times

🗨️ **NickMane** 2 months, 2 weeks ago

Control chart keep track of trends not Pareto chart

upvoted 2 times

🗨️ **cirajen** 6 months, 3 weeks ago

The control chart is a graph used to study how a process changes over time. Data are plotted in time order. A control chart always has a central line for the average, an upper line for the upper control limit, and a lower line for the lower control limit. ... Control charts for variable data are used in pairs.

upvoted 3 times

You are the business analyst for your organization and are about to conduct requirements elicitation for a process to streamline the customer fulfillment system your organization uses. You need to understand how the people, processes, and technology within the customer fulfillment system operates before you begin the elicitation process.

What type of analytical thinking are you participating in this scenario?

- A. Problem solving
- B. Creative thinking
- C. Brainstorming
- D. System thinking

Suggested Answer: *D*

  **binu801**  5 months, 3 weeks ago

system thinking is about the interaction between different systems and how they affect each other (like a human body) here people, processes, and technology can be considered as different systems

upvoted 5 times

Which of the following is NOT a component of an entity relationship diagram?

- A. Attributes
- B. Relationships
- C. Forks
- D. Entities

Suggested Answer: *C*

  **binu801** 5 months, 2 weeks ago

Forks are used in the process flow diagram

upvoted 3 times

What type of interview is the most common as part of requirements elicitation?

- A. Many-to-one
- B. Many-to-many
- C. One-to-one
- D. One-to-many

Suggested Answer: C

🗨️ **Nobita135** 2 weeks, 6 days ago

Selected Answer: C

The one-to-one interview is the most common type of interview used in requirements elicitation. This format involves a business analyst interviewing a single stakeholder or subject matter expert at a time. It allows for focused discussions, deeper exploration of specific topics, and building rapport, which can lead to more detailed and accurate information about requirements.

upvoted 1 times

🗨️ **Inzaghi78** 2 months, 3 weeks ago

BABOK V3 Page 300

10.25.2 Description

The interview is a common technique for eliciting requirements. It involves direct communication with individuals or groups of people who are part of an initiative.

In an interview, the interviewer directs questions to stakeholders in order to obtain information. One-on-one interviews are the most common.

upvoted 1 times

Which of the following meeting brings all of the potential vendors together to discuss the statement of work and the request for proposal?

- A. Contract bidding meeting
- B. Status meeting
- C. Qualified vendors meeting
- D. Bidders conference

Suggested Answer: *D*

🗨️ **b9adaf1** 4 months, 4 weeks ago

Nothing about that in Babok V3

upvoted 1 times

🗨️ **binu801** 2 years, 11 months ago

THIS QUESTION IS FROM A BUYER'S PERSPECTIVE. HENCE BIDDERS CONFERENCE IS CORRECT

upvoted 1 times

Which of the following is NOT a component of flowchart?

- A. Forks
- B. Attributes
- C. Activities
- D. Joins

Suggested Answer: *B*

  **Fedara** Highly Voted 3 weeks, 1 day ago

A fork node is used to split a single incoming flow into multiple concurrent flows. It is represented as a straight, slightly thicker line in an activity diagram. A join node joins multiple concurrent flows back into a single outgoing flow. A fork and join node used together are often referred to as synchronization.

upvoted 5 times

You are the business analyst for your organization and preparing to complete the requirements elicitation activities. Your manager wants to know when the requirements elicitation process will be completed.

Which of the following responses best describes the nature of the requirements elicitation process?

- A. The schedule of the project determines the duration of the requirements elicitation process .
- B. The duration of the requirements elicitation activities is determined by the willingness of the project stakeholders to contribute to the requirements information.
- C. The size of the project determines the duration of the requirements elicitation process.
- D. Eliciting requirements is not a compartmentalized activity.

Suggested Answer: D

Community vote distribution

D (100%)

🗨️ 👤 **Farooq_95** 2 months, 2 weeks ago

Correct answer is D. As per BABOK v3 pg 53, Elicitation and collaboration work is never a 'phase' in business analysis; rather, it is ongoing as long as business analysis work is occurring. Elicitation and collaboration can be planned, unplanned, or both.

upvoted 1 times

🗨️ 👤 **Typhat** 4 months, 4 weeks ago

Selected Answer: D

Elicitation activity is not phased. Rather it can occur at any point during the project

upvoted 1 times

4.0

Elicitation and collaboration work is never a 'phase' in business analysis; rather, it is ongoing as long as business analysis work is occurring. Eliciting business analysis information is not an isolated activity.

upvoted 3 times

🗨️ 👤 **timojeaga** 2 years, 11 months ago

The answer looks more like C. The size of the project, determines the duration of the requirement elicitation since the PM wants to know how long it will take for the process to be completed

upvoted 1 times

  **binu801** 2 years, 11 months ago

Can anyone explain why D is the answer. For me the answer should be B

upvoted 2 times

Which of the following is mandatory in most software development projects?

- A. Communication Management plan
- B. Disaster recovery plan
- C. Test plan
- D. Procurement plan

Suggested Answer: C

 **binu801**  5 months, 3 weeks ago

for very small project you maynot need a communication plan (let's say one developer is developing something for one user, but testing is must in every case.

upvoted 6 times

 **NickMane**  5 months, 4 weeks ago

This seems wrong, I would go with A

upvoted 1 times

You are the business analyst for your organization and are preparing for the conduct elicitation activity. You'll need several stakeholders' roles as you prepare for this activity in your organization.

Which one of the following stakeholders may be responsible to dictate that a specific process or technique be followed during your requirements elicitation activities?

- A. Project manager
- B. Regulator
- C. Functional management
- D. Project sponsor

Suggested Answer: B

Community vote distribution

D (100%)

cc2104 **Highly Voted** 3 years, 4 months ago

4.1 Prepare for Elicitation

4.1.7

- Domain Subject Matter Expert: provides supporting materials as well as guidance about which other sources of business analysis information to consult. May also help to arrange research, experiments, and facilitated elicitation.
- Project Manager: ensures that the appropriate people and resources are available to conduct the elicitation.
- Sponsor: has the authority to approve or deny a planned elicitation event, and to authorize and require the participation of specific stakeholders.

upvoted 11 times

Nobita135 **Most Recent** 2 weeks, 6 days ago

Selected Answer: B

A Regulator is responsible for ensuring that specific processes, techniques, or standards are followed during requirements elicitation activities, especially when compliance with legal, regulatory, or industry standards is required. Regulators may impose mandatory processes that the organization must adhere to, such as compliance audits, data privacy regulations, or industry-specific standards.

upvoted 1 times

JJLA 3 weeks, 4 days ago

Selected Answer: D

BABOK V3 2.4.9, page 18. Project sponsor authorize the work to be performed and techniques to be followed

upvoted 1 times

Inzaghi78 8 months, 3 weeks ago

key word 'dictate' BABOK V3 Pg 107

Legal/Regulatory Information: describes legislative rules or regulations that must be followed.

Regulators may impose specific rules, regulations, or standards that need to be followed during the elicitation process to ensure compliance. They play a role in shaping and guiding the requirements elicitation activities based on legal and regulatory requirements 1 . Therefore, the correct answer is B. Regulator.

upvoted 1 times

b9adaf1 10 months, 3 weeks ago

Regulator not even a stakeholder of this task in BABOK V3

upvoted 1 times

DeborahT 1 year, 3 months ago

Ans is B: Regulator

literally word for word from BABOK v2 pg 59 under "Conduct Elicitation Activity"

upvoted 1 times

Dillon91 1 year, 11 months ago

D. pg 61. Sponsor: has the authority to approve or deny a planned elicitation
upvoted 1 times

🗨️ 👤 **AnyU** 2 years, 10 months ago

Selected Answer: D

From the options only Sponsor is mentioned under Stakeholders in the Conduct Elicitation task.
upvoted 4 times

🗨️ 👤 **MFZZ** 2 years, 10 months ago

C is correct

In this scenario the stakeholder is dictating a specific process or technique is followed.

Definition of a Regulator (2.4.8) Regulators are responsible for the definition and enforcement of standards. Standards can be imposed on the solution by regulators through legislation, corporate governance standards, audit standards, or standards defined by organisational centers of competency. Alternate roles are government, regulatory bodies, and auditor.

upvoted 2 times

What element of the conduct elicitation activity is tracked to provide a basis for future planning?

- A. Time actually spent eliciting the requirements
- B. Number of stakeholders that did not participate in the requirements elicitation
- C. Cost of actually eliciting the requirements
- D. Changes that entered the scope throughout the requirements elicitation activities

Suggested Answer: A

🗨️ 👤 **Nobita135** 2 weeks, 6 days ago

Selected Answer: A

Tracking the time actually spent eliciting the requirements provides valuable data for future project planning. It helps estimate effort, allocate resources, and create more accurate timelines for similar future projects. This historical data becomes part of the organization's lessons learned and organizational process assets for better project forecasting.

upvoted 1 times

You have identified several problems that you need to track as the business analysis duties progress. You want to make certain that the identified activities are resolved.

What document elicitation technique can help in this scenario?

- A. Brainstorming
- B. Observation
- C. Interviews
- D. Problem tracking

Suggested Answer: D

  **b9adaf1** 4 months, 3 weeks ago

In Babok V3 : Problem tracking = Item tracking
upvoted 1 times

  **DeborahT** 9 months, 3 weeks ago

Correct its in BABOK v2
upvoted 1 times

  **bim_269** 1 year, 6 months ago

Item tracking tracks the item from the initial recording of the concern and its degree of impact to its agreed upon closure. you want to make certain that the activities are resolved, dat means you need to track each item from its initiation till they are resolved to ensure its resolution so Item Tracking is right choice BABOK V3 10.26.2 last paragraph
upvoted 1 times

  **NikolaBA** 1 year ago

There is nothing called problem tracking, otherwise I would have agreed with you. Assuming the question is correct (which I doubt it) because the question asks about DOCUMENT elicitation technique! However, if we assume the question is correct, I beleive it is real life question more than a theoretical question, if I am in such situation I will use any elicitation technique based on the allowed time, environment, and process, probably observation could be a good choice here
upvoted 1 times

  **CBAP_Exam** 2 years, 6 months ago

It's actually Item Tracking as per Babok V3 terminology.
upvoted 3 times

  **Fadj** 2 years ago

So if there is nothing like Problem Tracking, isn't this then a wrong answer? Does the question not say that the issues have been identified? So if the issues are known, should brainstorming not be a way to try solving the identified issues.
upvoted 1 times

You are the business analyst for your organization and are training Tracy on business analysis duties. You are explaining to Tracy how it's important for a business analyst to generate new ideas to approaching problems, solving problems, and to generate alternative solutions. You stress that it's important for the business analyst to generate new ideas and innovative concepts.

What type of analytical thinking are you describing for Tracy?

- A. Lateral thinking
- B. Brainstorming
- C. Creative thinking
- D. Decision making

Suggested Answer: C

 **rupakarthik** Highly Voted 6 months, 2 weeks ago

BABOK Page-188

Creative thinking involves generating new ideas and concepts as well as finding new or different associations between existing ideas and concepts.

upvoted 7 times

What requirements elicitation technique examines the available information, documentation, records, and history of a solution, organization, or cause to identify relevant information to the current business analysis duties?

- A. Benchmarking
- B. Dataflow diagrams
- C. Document analysis
- D. Requirements elicitation

Suggested Answer: C

correct

upvoted 1 times

What type of requirements elicitation technique is the Delphi Technique?

- A. Survey
- B. Workshop
- C. Round table
- D. Prototyping

Suggested Answer: A

Community vote distribution

A (100%)

🗳️ 👤 **Saira** Highly Voted 3 years, 11 months ago

Answer is incorrect. It is "Estimation" technique. BABOK V3 10.19.3
upvoted 8 times

🗳️ 👤 **Nobita135** Most Recent 2 weeks, 6 days ago

Selected Answer: A

The Delphi Technique is a type of survey-based requirements elicitation technique that involves gathering input from a panel of experts through multiple rounds of anonymous questionnaires. The responses are aggregated and shared with the group after each round to refine opinions and reach a consensus. This method is particularly useful for forecasting, decision-making, and identifying requirements in complex projects.
upvoted 1 times

🗳️ 👤 **basmus12** 2 months, 3 weeks ago

Delphi: uses a combination of expert judgment and history. There are several variations on this process, but they all include individual estimates, sharing the estimates with experts, and having several rounds of estimation until consensus is reached. An average of the three estimates is used.
BABOK V3 Chapter 10 page 272
upvoted 1 times

🗳️ 👤 **Farooq_95** 8 months ago

Selected Answer: A

The Delphi method is a forecasting process framework based on the results of several rounds of questionnaires sent to a panel of experts.
upvoted 1 times

🗳️ 👤 **Rabbitsfoot** 9 months, 1 week ago

Selected Answer: A

BABOK V3 confirms that the Delphi Technique indeed involves gathering individual estimates from experts, sharing these estimates, and iterating until a consensus is reached. This aligns with the characteristics of a survey-based approach, where opinions or estimates are collected from multiple participants and aggregated to reach a collective decision or consensus. Therefore, the Delphi Technique is classified as a survey-based requirements elicitation technique.
upvoted 2 times

🗳️ 👤 **NickMane** 3 years, 4 months ago

Answer a) is correct. Delphi technique is surveying a panel of experts..
upvoted 1 times

🗳️ 👤 **ekmode** 3 years, 4 months ago

none of the options are correct as it is a type of Estimation Technique
upvoted 2 times

🗳️ 👤 **binu801** 3 years, 5 months ago

Round table means all the experts are together discussing and coming to conclusion. where as in the Delphi technique, experts are sent surveys periodically with feedback of responses from other experts till a consensus is agreed. hence survey is the nearest one
upvoted 2 times

🗳️ 👤 **timojeaga** 3 years, 5 months ago

again looks more like round table...because it involves panel of experts (Round table)

upvoted 2 times

  **timojeaga** 3 years, 5 months ago

Delphi is Survey... simple and short.

upvoted 3 times

  **NickMane** 3 years, 5 months ago

Given these answers, A is the closest one

upvoted 1 times

  **cirajen** 3 years, 9 months ago

The answer should be A.

The Delphi method is a process used to arrive at a group opinion or decision by surveying a panel of experts. Experts respond to several rounds of questionnaires, and the responses are aggregated and shared with the group after each round.

🗨️ **Nobita135** 2 weeks, 5 days ago

Selected Answer: B

When requirements elicitation information is captured on a whiteboard, it is considered temporary documentation. To preserve this important data, Mark must transfer the information to a more permanent medium such as meeting minutes, a requirements management tool, or another document before the whiteboard is erased. This ensures that valuable insights and decisions made during the session are not lost.

upvoted 1 times

🗨️ **Farooq_95** 2 months, 1 week ago

Selected Answer: B

Option B is correct as it is the immediate action BA need to take to transfer this information to a more permanent and accessible medium for documentation and reference.

Options A, C, and D involve aspects of documenting or approving the whiteboard information, but they do not specifically address the need to transfer the information to another medium before the whiteboard is erased.

Holly is the business analyst for her organization. Holly encourages teamwork and open communications among the business analysis team and the stakeholders.

She wants stakeholders to drop by her office and freely discuss the requirements, the solution scope, and other concerns about the solution she's working on.

Holly definitely prefers informal communications.

What is the danger Holly may experience with informal communications?

- A. There is no danger; informal communications is a preferred business analysis technique.
- B. The stakeholders may address the business analysis team and the project team directly rather than communicate through Holly.
- C. Stakeholders may miss information and the requirements could become ambiguous.
- D. The stakeholders may not know who's in charge of the solution.

Suggested Answer: C

Community vote distribution

C (100%)

🗨️ 👤 **Rabbitsfoot** 3 months ago

Selected Answer: C

C. Stakeholders may miss information and the requirements could become ambiguous.

While informal communications can foster collaboration and open dialogue, there is a risk that important information may not be properly documented or communicated to all stakeholders. Without a structured approach to communication, there is a higher chance of misunderstandings, incomplete requirements, and ambiguity, leading to potential issues in the solution development process. Therefore, it's essential for Holly to ensure that even informal discussions are properly documented, and key information is effectively communicated to all relevant parties.

The creative thinking process has three values to determine the effectiveness of the process.

Which one of the following is not a measurement of effective creative thinking?

- A. Application of new ideas to resolve existing problems
- B. Generation of a pre-determined number of new ideas for a business solution
- C. Willingness of stakeholders to accept new approaches
- D. The successful generation and productive consideration of new ideas

Suggested Answer: B

Community vote distribution

C (67%)

B (33%)

🗨️ **Nobita135** 2 weeks, 5 days ago

Selected Answer: B

Creative thinking is about generating innovative ideas, considering new possibilities, and applying them effectively. B. Generation of a pre-determined number of new ideas is incorrect because creativity cannot be measured by hitting a fixed number of ideas. The focus should be on quality, relevance, and applicability of the ideas rather than a specific quantity.

upvoted 1 times

🗨️ **basmus12** 2 months, 3 weeks ago

Selected Answer: B

In BABOK, creative thinking is valued when it results in:

The application of new ideas to solve existing problems.

Stakeholder openness to new approaches and ideas.

The productive consideration of those ideas for their effectiveness.

Thus, Option B (Generation of a pre-determined number of new ideas for a business solution) is not a valid measure of effective creative thinking according to BABOK v3, as the focus should be on the quality and applicability of ideas, not their quantity.

upvoted 1 times

🗨️ **Rabbitsfoot** 9 months, 1 week ago

Selected Answer: B

The value that is NOT a measurement of effective creative thinking is:

B. Generation of a pre-determined number of new ideas for a business solution.

While generating a predetermined number of new ideas can be a part of the creative thinking process, it doesn't necessarily guarantee effectiveness.

What effective creative thinking IS:

The effectiveness of creative thinking should be measured based on the practical application of new ideas to solve existing problems (option A), the willingness of stakeholders to accept new approaches (option C), and the successful generation and productive consideration of new ideas (option D).

upvoted 2 times

Which of the following models demonstrates the attributes, operations, and relationship to entities within the solution?

- A. Entity Relationship
- B. Data dictionary
- C. Class model
- D. CRUD matrix

Suggested Answer: C

Community vote distribution

C (80%)

A (20%)

 **km_45** Highly Voted 3 years, 11 months ago

Entity Relationship is more likely: In a class model, the term association is used instead of a relationship. In a class diagram, entities are referred to as classes.

upvoted 5 times

 **Chyka** 3 years, 11 months ago

this maybe a tricky question. They asked for a model(which can either be Class or Data) but Entity Relationship Diagram is a diagram for Data Model while Class diagram is for class model, both are diagrams for the respective models. Hence, i think the answer is correct.

upvoted 4 times

 **Chyka** 3 years, 11 months ago

Also, Data dictionary on page 247 classifies Entity Relationship Diagram as part of it, which classifies data between solution and stakeholder. The question also mentioned solution which means A can be the answer.

upvoted 2 times

 **km_45** 3 years, 11 months ago

I think you are right about model vs diagram, i agree, class model is the answer: The diagram in a data model is called an entity-relationship diagram (ERD). In a class model, the diagram is called a class diagram. (p258)

upvoted 1 times

 **NickMane** 3 years, 4 months ago

no it's not Each object in the system has data structure and behavior in Class model, A) - correct answer

upvoted 2 times

 **Nobita135** Most Recent 2 weeks, 5 days ago

Selected Answer: C

A Class Model is a diagram used in object-oriented analysis and design that describes the attributes (properties), operations (methods), and relationships of entities (called classes) within a system. It visually represents how different classes interact and are related, making it useful for defining the structure of a solution in system design.

Why the Other Options Are Incorrect:

- A. Entity Relationship (ER) Diagram: An ER Diagram represents data entities, their attributes, and relationships in a database context. However, it focuses on data structure rather than defining operations or behaviors of entities.

upvoted 1 times

 **cnwahiri.ca_111** 2 months ago

Selected Answer: C

Babok v3 pg 257 A class "diagram or model" also contains operations or functions that describe what can be done with the class, such as generating an invoice or opening a bank account. Keyword is "operations".

upvoted 1 times

 **Farooq_95** 8 months, 2 weeks ago

Selected Answer: C

Class Model is correct. The key word is "Operation" which is a characteristic of Class diagram or model, not of an Entity relationship diagram. As per BABOK v3 10.15.3.1, a class also contains operations or functions that describe what can be done with the class, such as generating an

invoice or opening a bank account. This is not a feature of Entity Relationship diagram so Class diagram is more appropriate.

upvoted 2 times

🗨️ **Rabbitsfoot** 9 months, 1 week ago

Selected Answer: D

Answer: RFP

upvoted 2 times

🗨️ **bim_269** 1 year, 6 months ago

A request for proposal (RFP), request for quote (RFQ), and request for information (RFI) are three distinct types of documents that businesses and other entities use to reach out to the business community for suppliers or contractors that they may be able to work with.

when a company or other organization sends out an RFQ it knows exactly what it needs and is seeking the best supplier or suppliers.

An RFP is a more open-ended process. The business or organization is seeking qualified contractors to carry out a new project. The project and its goals are defined in some detail but there is room for creativity in the responses.

In risk analysis, which of the following can be identified as a consequence of a disaster?

- A. Loss of operating capability
- B. Loss of goodwill
- C. Loss of competitive edge
- D. Loss of stockholder confidence

Suggested Answer: A

Community vote distribution

D (100%)

 **MFZZ** Highly Voted 4 months, 4 weeks ago

A is correct.

10.38.1 Risk analysis and management identifies areas of uncertainty that could negatively affect value, analyzes and evaluates those uncertainties, and develops and manages ways of dealing with the risks.

As the question relates to loss of operating capability, this refers to loss of solution value.

upvoted 5 times

 **Nobita135** Most Recent 2 weeks, 5 days ago

Selected Answer: A

In risk analysis, especially when considering the consequences of a disaster, loss of operating capability is a direct and immediate consequence. A disaster, such as a system failure, natural calamity, or major security breach, can disrupt an organization's ability to operate, leading to halted production, interrupted services, or even complete shutdown. This is a primary consideration in business continuity planning and disaster recovery planning.

Which of the following phases is the first step towards creating a business continuity plan?

- A. Business Continuity Plan Development
- B. Scope and Plan Initiation
- C. Business Impact Assessment
- D. Plan Approval and Implementation

Suggested Answer: B

🗨️ **Nobita135** 2 weeks, 5 days ago

Selected Answer: C

The Business Impact Assessment (BIA) is the first step in creating a business continuity plan. It involves identifying and evaluating the potential impacts of disruptions to business operations. The BIA helps prioritize critical business functions, processes, and systems, and determines the potential consequences of their interruption. This assessment is essential for developing effective strategies to mitigate risks and ensure that the most critical functions can continue in the event of a disaster or crisis.

upvoted 1 times

🗨️ **75c1943** 2 months, 1 week ago

C: The Business Impact Assessment (BIA) is the first step in creating a business continuity plan, as it identifies critical functions and the potential impact of a disruption to those functions, forming the foundation for the entire continuity strategy.

Which one of the following diagrams when properly laid out is always laid in a left to right display to properly reflect the chronology of all project work?

- A. Influence diagram
- B. Project schedule network diagram
- C. Arrow diagramming method
- D. Time-scaled schedule network diagram

Suggested Answer: B

🗨️ **Nobita135** 2 weeks, 5 days ago

Selected Answer: B

A Project Schedule Network Diagram is a flowchart-like diagram that represents the sequence of project activities and the logical relationships between them. When properly laid out, it is typically displayed left to right to reflect the chronology of the project work. The activities are arranged in the order they should be completed, and the arrows or lines between them show dependencies and the flow of work over time.
upvoted 1 times

Which of the following is a visual decomposition of the program scope and the resources needed in order to create the things defined within the program scope?

- A. Resource breakdown structure (RBS)
- B. product breakdown structure (PBS)
- C. Budgeted Cost of Work Scheduled (BCWS)
- D. Work Breakdown Structure (WBS)

Suggested Answer: A

🗨️ 👤 **Nobita135** 2 weeks, 5 days ago

Selected Answer: D

The Work Breakdown Structure (WBS) is a visual decomposition of the project or program scope. It breaks down the work into smaller, manageable components or tasks. The WBS organizes and defines the total scope of the program by dividing it into hierarchical levels, detailing both the work to be done and the resources needed to complete the tasks. It serves as a foundational document for planning, assigning, and tracking the work.

upvoted 1 times

🗨️ 👤 **Farooq_95** 3 months, 3 weeks ago

Correct answer is D (WBS).

Justification: A Work Breakdown Structure (WBS) is a visual decomposition of the program scope and the resources needed to create the deliverables defined within that scope. It breaks down the project into smaller, more manageable components, providing a hierarchical representation of the work to be done.

The Resource Breakdown Structure (RBS) is a hierarchical representation of resources organized by resource category or type, such as labor, equipment, materials, or facilities. RBS primarily focuses on resources allocation and categorization rather than decomposing the program scope and deliverables. Further, RBS is not a terminology used in BABOK v3.

Which of the following stages of a project defines the number of risks and opportunities, including intense planning and anticipation of risk events?

- A. Planning
- B. Executing
- C. Initiation
- D. Closing

Suggested Answer: C

 **DoomsdayNair** Highly Voted 3 years, 11 months ago

A. Planning
upvoted 6 times

 **ParPan** Highly Voted 3 years, 5 months ago

A. Planning. Keyword "including intense planning "
upvoted 6 times

 **Nobita135** Most Recent 2 weeks, 5 days ago

Selected Answer: A

The Planning stage of a project is where risk management is most intensely addressed. During this phase, project teams identify and assess potential risks and opportunities that may affect the project. It involves creating a detailed risk management plan, developing strategies to address those risks, and putting in place actions to mitigate or capitalize on them. This stage includes anticipating potential risk events, determining their impact, and preparing responses.

upvoted 1 times

 **Syedusama** 1 month ago

Selected Answer: A

In project management, the Planning phase is where the detailed risk management process takes place. This phase involves:

Risk identification: Determining potential risks and opportunities that might affect the project.

Risk assessment: Analyzing the likelihood and impact of these risks and opportunities.

Risk response planning: Developing strategies to mitigate negative risks and take advantage of opportunities.

Which of the following establishes organizational checks and balances with a proper segregation of front, back, and middle office functions for effective risk management?

- A. Risk response plan
- B. Risk analysis
- C. Risk management plan
- D. Risk governance

Suggested Answer: D

Community vote distribution

A (50%)

D (50%)

🗨️ **Nobita135** 2 weeks, 5 days ago

Selected Answer: D

Risk governance involves establishing a framework for managing risk across an organization. It includes the setting of policies, procedures, and responsibilities to ensure that risks are properly managed at all levels of the organization. A key aspect of risk governance is the segregation of duties between the front, back, and middle office functions, ensuring that no single function has too much control or influence over risk management processes. This helps in creating organizational checks and balances and ensures effective risk management.

upvoted 1 times

🗨️ **Farooq_95** 2 months ago

Selected Answer: A

BABOK v3 10.38.3.4 defines risk response as approach for dealing with a specific risk is selected. Here, the Organization tries to mitigate risk via organizational checks and balances with proper segregation of front, back and middle office functions. Hence, risk response is correct

The PMBOK Guide, 6th edition, defines fast-tracking as a schedule compression technique in which activities or phases normally performed in a sequence are done in parallel for at least a portion of their duration.

upvoted 1 times

Which of the following software development life cycles is a methodology that divides the project into phases, and the project manager focuses on control of time, cost, and scope?

- A. Spiral
- B. Agile
- C. Waterfall
- D. Incremental

Suggested Answer: C

Community vote distribution

B (67%)

C (33%)

🗨️ **Nobita135** 2 weeks, 5 days ago

Selected Answer: C

The Waterfall methodology is a traditional software development life cycle (SDLC) that divides the project into distinct, sequential phases, typically including requirements gathering, design, development, testing, deployment, and maintenance. Each phase must be completed before the next begins, and the project manager focuses heavily on controlling the project's time, cost, and scope throughout these phases. The structured, linear nature of the Waterfall model emphasizes careful planning, documentation, and monitoring to ensure that the project stays on track within the defined constraints.

upvoted 1 times

Which of the following roles approves the project scope statement, phase gate reviews, solution validations, scope changes, and project success criteria?

- A. Project manager
- B. Subject matter expert
- C. Solution owner
- D. Stakeholder

Suggested Answer: C

 **OctavianG** Highly Voted 3 years, 3 months ago

Who approves everything, the solution owner.
upvoted 5 times

 **AlphaD** Most Recent 2 months ago

Out of scope question.
upvoted 1 times

 **MFZZ** 2 years, 7 months ago

When it comes to questions like these it's always hard to determine whether it is sponsor or project manager. Luckily, ex doesn't ask specific questions like this
upvoted 1 times

 **Pank_HD** 2 years, 8 months ago

Correct is Sponsor / solution owner. Project manager won't approve it, they have to seek approvals from sponsors, but delivering these within time and budget etc. once changes are approved is the responsibility of a PM.
upvoted 2 times

 **OlivierPaudex** 2 years, 9 months ago

Answer C is correct

The solution owner is the one who is responsible for the go/no-go from an IT view. The role is defined more into Agile methodology. Also called a sponsor.

upvoted 3 times

 **OlivierPaudex** 2 years, 2 months ago

BABOK V3 doesn't mention any "solution owner", but replace it with "sponsor"
upvoted 2 times

 **MFZZ** 2 years, 10 months ago

Project Manager should be the correct answer.
2.4.7 Project managers are responsible for managing the work required to deliver a solution that meets a business need, and for ensuring that the project's objectives are met while balancing the project factors including scope, budget, schedule, resources, quality, and risk.
upvoted 2 times

 **SavvyBA** 3 years, 1 month ago

in BABOK v3, this is called a "Sponsor"
upvoted 2 times

 **ekmode** 3 years, 4 months ago

I think it is C- Solution owner, and not Project Manager, this being said based on the key work project success, how will PM decide himself decide if the project is successful or not.
upvoted 3 times

 **RoseBeat** 3 years, 5 months ago

ANS: A. Project managers are responsible for managing the work required to deliver a solution that meets a business need, and for ensuring that the project's objectives

are met while balancing the project factors including scope, budget, schedule, resources, quality, and risk. BABOK V3. PG 28

Which of the following processes includes tasks and roles, risk categories, schedules for risk management activities, definitions of probability and impact, and the stakeholders' tolerances?

- A. Risk management plan
- B. Risk register
- C. Risk analysis
- D. Risk response plan

Suggested Answer: A

🗨️ 👤 **Nobita135** 2 weeks, 5 days ago

Selected Answer: A

A Risk Management Plan outlines how risk management activities will be conducted in a project. It includes tasks and roles, risk categories, schedules for risk management activities, definitions of probability and impact, risk thresholds, and stakeholders' risk tolerances. This plan provides a framework for identifying, analyzing, and responding to project risks.

upvoted 1 times

🗨️ 👤 **Hobic** 5 months, 1 week ago

A risk management plan is not a process

upvoted 1 times

🗨️ 👤 **OctavianG** 1 year, 3 months ago

A risk management plan also called a "risk mitigation plan" is a well-defined document that tells how to deal with specific risks and what management actions must be taken against those risks in order to mitigate or remove threats to the project tasks and outcomes.

The risk management plan gives teams a sense of measures they need to take in order to identify, analyze, and respond to all the risks running around within the project wheel.

upvoted 3 times

Which of the following is the process of identifying and assessing factors that may jeopardize the success of a project or the achievement of a goal?

- A. Risk analysis
- B. Risk identification
- C. Risk retention
- D. Risk communication

Which of the following roles helps assess the data requirements of a project, identifies data assets, and helps the project team complete data modeling requirements?

- A. Database analyst
- B. End user
- C. Subject matter expert
- D. Information architect

Suggested Answer: D

Community vote distribution

D (100%)

🗨️ **Farooq_95** 1 month, 4 weeks ago

Selected Answer: D

Ideally speaking, it should be Implementation SME. As BABOK v3 does not define Information architect role but specifies it under the definition of Implementation SME, hence, it is correct.

Implementation SME is correct because of following 2 reasons (BABOK v3 10.15.2)

* Logical and physical data models include elements specific to the solutions they support, and are generally developed by stakeholders with expertise in implementing particular technical solutions.

* Physical data model is used by implementation subject matter experts to describe how a database is physically organized. It addresses concerns like performance, concurrency, and security.

upvoted 2 times

🗨️ **Sha7rou** 1 year, 9 months ago

it should be ISME, while solution architect, is mentioned 2 times in the babok but nothing helps with this questions.

Which of the following processes is used by organizations to set the risk tolerance, identify the potential risks, and prioritize the tolerance for risk?

- A. Risk communication
- B. Risk identification
- C. Risk analysis
- D. Risk management

Suggested Answer: D

Community vote distribution

D (100%)

🗳️ 👤 **tehmama** 1 year, 1 month ago

i will go with RISK ANALYSIS. Because it involves assessing the potential impact and likelihood of identified risks and determining the level of risk that an organization is willing to accept

upvoted 2 times

🗳️ 👤 **basmus12** 2 months, 2 weeks ago

(Risk analysis) is the process of assessing and analyzing identified risks, but it does not encompass setting risk tolerance or prioritizing risk in the full context of risk management.

upvoted 1 times

🗳️ 👤 **OliverPaudex** 2 years, 2 months ago

BABOK V3 speaks only on "Risk analysis and Management" which identifies areas of uncertainty that could negatively affect values (BABOK 10.38.1)

There is no separation between this two tasks
Also risk communication doesn't exist anymore

Risk identification is the task to discover and identify risks through a combination of experts, users, stakeholders and past experiences.

upvoted 1 times

🗳️ 👤 **Shreejith** 2 years, 5 months ago

Selected Answer: D

Risk management is an ongoing activity. Continuous consultation and communication with stakeholders helps to both identify new risks and to monitor identified risks.

upvoted 2 times

🗳️ 👤 **MFZZ** 2 years, 7 months ago

It references tolerance so this needs to be managed as well as analysed. So management is the higher response for risk

upvoted 1 times

🗳️ 👤 **Spartanxxv** 2 years, 8 months ago

Why Risk Management? It can also be Risk Analysis.

- D. Interviewing

Suggested Answer: D

Community vote distribution

B (50%)

A (50%)

 **nit687** Highly Voted 3 years, 5 months ago

Some of the techniques of quantitatively determining probability and impact of a risk include:

- Interviewing.
- Cost and time estimating.
- Delphi technique.
- Historical Records.
- Expert judgment.
- Expected monetary value analysis.
- Monte Carlo Analysis.
- Decision tree.

upvoted 7 times

 **Nobita135** Most Recent 2 weeks, 5 days ago

Selected Answer: C

Interviewing is a quantitative risk analysis technique that relies on expert judgment, experience, and historical data to estimate the probability and impact of risks on project objectives. It involves conducting structured or semi-structured interviews with subject matter experts and stakeholders to gather relevant information for risk assessment.

upvoted 1 times

 **Rabbitsfoot** 9 months, 1 week ago

Selected Answer: B

v3 10.38 - Risk analysis and management

Sensitivity analysis is a widely recognized quantitative risk analysis technique used in project management and business analysis. It involves assessing the sensitivity of project outcomes to changes in various factors or assumptions. Sensitivity analysis helps in understanding how changes in input variables affect the output or results of a model or analysis.

While sensitivity analysis may not be explicitly mentioned in the BABOK v3, it aligns with the broader principles of risk analysis and management discussed in the BABOK, particularly in the context of analyzing the potential impact of risks on project objectives.

(Sensitivity analysis) is used to assess how different variables (such as risk factors) affect project outcomes, but it does not specifically rely on past data for calculating the probability and impact of risks

upvoted 1 times

 **Rabbitsfoot** 9 months, 1 week ago

The other options provided—probability distribution, modeling and simulation, and interviewing—are also quantitative risk analysis techniques. However, they focus on different aspects of risk analysis:

Probability distribution involves analyzing the likelihood of various outcomes based on different probability distributions.

Modeling and simulation involve creating models of systems or processes to simulate various scenarios and assess their outcomes.

Interviewing is a qualitative technique that involves gathering information from stakeholders or subject matter experts through structured interviews.

Each of these techniques has its own strengths and applications within the realm of risk analysis, but sensitivity analysis specifically addresses the sensitivity of outcomes to changes in input variables, making it a valuable tool in risk assessment and decision-making

upvoted 2 times

🗨️ 👤 **Farooq_95** 9 months, 3 weeks ago

Correct answer is A.

Interviewing is not a quantitative risk analysis technique. Probability distribution is a quantitative risk analysis technique that relies on historical data and statistical methods to model the probability of different outcomes and their associated impacts on project objectives.

V-3 10.38.2 Risk Analysis and Management – (...)Risk management is an ongoing activity. Continuous consultation and communication with stakeholders helps to both identify new risks and to monitor identified risks.
Risk Communication is not found in either BABOK V-2 or V-3
upvoted 7 times

🗨️ **NickMane** 2 years, 10 months ago

thanks for the heads-up
upvoted 1 times

🗨️ **Nobita135** Most Recent 2 weeks, 4 days ago

Selected Answer: C

The correct answer is:

C. Risk communication

Risk Communication involves coordinating and collaborating with stakeholders, team members, and other credible sources to share information about risks. Its purpose is to ensure that everyone involved understands potential risks, their impacts, and the strategies for managing them. This process fosters transparency and helps in making informed decisions throughout the project lifecycle.

Why the Other Options Are Incorrect:

A. Risk Identification:

- This process involves determining which risks might affect a project and documenting their characteristics. While it may involve some collaboration, its primary focus is identifying risks, not ongoing communication.

B. Risk Management:

- This is the overarching process of identifying, assessing, and controlling risks. It includes multiple phases, including risk communication, but it's broader and not limited to collaboration alone.

upvoted 1 times

🗨️ **Farooq_95** 2 months, 2 weeks ago

Selected Answer: A

Risk identification is correct because of following 2 reasons:

(1) Risk Identification is a term specifically used in BABOK v3 10.38.3.1 and involves combination of expert judgment, stakeholder input (in form of collaboration), experimentation, past experiences, and historic analysis.

(2) As per BABOK v3 10.38.2, continuous and communication with stakeholders helps both identify new risk (i.e., Risk Identification) and to monitor identified risks.

upvoted 1 times

upvoted 1 times

Which of the following is the formal acceptance of the project?

- A. A project review
- B. A sign-off
- C. Risk assessment
- D. Inspection trend analysis

Suggested Answer: *B*

  **OctavianG** 3 months ago

Business analysts are responsible for obtaining stakeholder approvals and are required to understand who holds decision-making responsibility and who possesses authority for sign-off across the initiative.

upvoted 2 times

  **OctavianG** 1 month, 4 weeks ago

Project sign-off is one of the many activities you'll do at the end of a project. This is the phase where you've handed over all deliverables and are about to dismiss the project team. The typical steps in this phase include: Project sign-off and completion of all other legal formalities.

upvoted 2 times

There are 50 stakeholders in the current project. How many communication channels exist in this project?

- A. 1200
- B. 1225
- C. 1500
- D. 500

Suggested Answer: B

🗨️ **rsivaprakash** Highly Voted 3 years, 10 months ago

$50 * (50-1) / 2 = 1225$

upvoted 9 times

🗨️ **Rabbitsfoot** Most Recent 3 months, 3 weeks ago

Courtesy of ChatGPT:

The formula used to calculate the number of communication channels in a project, given the number of stakeholders, is based on combinations in combinatorics.

The formula is: $50*(50-1)/2=1225$

N is the number of stakeholders or individuals involved in the project.

This formula is derived from the fact that each stakeholder can potentially communicate with every other stakeholder, but we divide by 2 to avoid counting each pair twice (since communication between A and B is the same as communication between B and A).

Torn between A & D... but

BABOK V3 pg 27 Figure 3.1.2. Formality and Level of Detail of Bss Analysis deliverables - see level of Formality under Adaptive: 'Informal—information is gathered through team interaction and feedback.'

In an adaptive or Agile approach, which emphasizes flexibility, collaboration, and continuous feedback, the concept of a feedback loop (option A) is more likely to be applied.

A. Feedback loop:

Agile methodologies, such as Scrum, encourage iterative development and continuous improvement. Feedback loops are integral to these approaches, allowing for regular assessment, adjustment, and adaptation based on ongoing feedback from team members and stakeholders.

In summary, option A (Feedback loop) is more in line with the adaptive and Agile approach, as it reflects the continuous and iterative nature of Agile methodologies.

Which of the following processes is must at the end of each project phase to determine the completeness of the project work and to gain the customer's acceptance to move the project forward?

- A. Scope verification
- B. Inspection of key results
- C. Quality control
- D. Phase gate review

Suggested Answer: A

Community vote distribution

D (100%)

🗨️ 👤 **Farooq_95** 2 months, 1 week ago

Selected Answer: D

A question from PMBOK. PMBOK defines "Phase Gate Review" as A review at the end of a phase in which a decision is made to continue to the next phase, to continue with modification, or to end a project or program.

Other options are incorrect:

Scope verification (option A) involves formal acceptance of completed project deliverables by stakeholders to ensure that they meet the agreed-upon requirements and specifications. Inspection of key results (option B) may involve reviewing specific project outcomes or milestones but may not necessarily occur at the end of each project phase. Quality control (option C) focuses on monitoring and verifying that project deliverables meet quality standards but may not specifically address the completeness of project work at the end of each phase.

upvoted 2 times

🗨️ 👤 **tehmama** 7 months, 3 weeks ago

Phase gate reviews are more about overall project progress and decision-making, while scope verification is focused on validating individual deliverables against requirements.. SCOPE VERIFICATION seems more like it

upvoted 1 times

🗨️ 👤 **raf79** 1 year ago

The phase gate process is a technique that is used to guide a project from conception to launch. It requires a review of each project stage before moving on to the next. In the phase gate review process, specific criteria must be met to determine the success of a phase and the ongoing viability of a project.

Not CBAP v3 Test related. Skip. Thanks Examtopics.

upvoted 1 times

🗨️ 👤 **Farooq_95** 8 months, 2 weeks ago

Selected Answer: C

The correct answer is Activity Network diagram. However, this diagram is not described in BABOK v3. Its definition is "An activity network diagram is a graphical representation of the sequence and dependencies of the project activities. It shows the start and end points of each activity, the duration and resources required, and the logical relationships between them." None of the other diagrams include timelines of various tasks so Activity Network Diagram is the only possible option.

Selected Answer: C

C. Life cycle costing

Life cycle costing is not an example of transference risk response. It involves evaluating the total cost of ownership of a project over its life span, rather than transferring risk to another party.

upvoted 1 times

 **fisholadonte** 1 year, 6 months ago

Anything that allows you move the responsibilities of a risk over to another party is a Transfer response to identified risk
upvoted 1 times

Which of the following compares two or more systems, states, services, products, or things to determine the best viable choice?

- A. Benchmarking
- B. Risk Identification
- C. Risk analysis
- D. Cost-benefit analysis

Suggested Answer: A

Community vote distribution

A (100%)

🗨️ 👤 **Farooq_95** 2 months, 1 week ago

Selected Answer: A

Benchmarking is correct. As per BABOK v3 10.4.2, Benchmark studies are conducted to compare organizational practices against the best-in-class practices. These comparisons can be extended to products, services, systems, etc. While cost-benefit analysis is indeed a valuable tool for decision-making, it focuses specifically on comparing the monetary costs and benefits of alternatives. On the other hand, benchmarking involves comparing various aspects of systems, services, or products beyond just their monetary aspects. It may include comparisons of performance, quality, efficiency, or other non-monetary factors.

upvoted 1 times

🗨️ 👤 **sojomoojo** 1 year, 10 months ago

Benchmarking compares 2 or more while Cost benefits relates to a single assessment of a situation, product or activity

Which of the following can be an effective tool during quality control to help determine the how the problem occurred?

- A. Rework
- B. Trend Analysis
- C. Flowcharting
- D. Pareto Diagram

Suggested Answer: C

🗨️ 👤 **Nobita135** 2 weeks, 2 days ago

Selected Answer: C

Flowcharting is an effective tool used during quality control to visually map out a process, showing the sequence of steps and how they are connected. By analyzing a flowchart, teams can identify where problems or bottlenecks might occur, helping to determine how a problem happened.

upvoted 1 times

🗨️ 👤 **NorieRose** 5 months ago

Isn't it a Pareto Diagram?

-commonly used in situations where you want to identify and prioritize the most significant factors or causes contributing to a particular problem or outcome.

upvoted 1 times

Which of the following directs the improvement efforts to those areas that will have the biggest impact?

- A. Flowchart
- B. Gantt chart
- C. Pareto diagram
- D. User Documentation

Suggested Answer: C

🗨️ **Nobita135** 2 weeks, 2 days ago

Selected Answer: C

A Pareto diagram is a bar chart that ranks issues, problems, or causes from most to least significant based on their frequency or impact. It follows the Pareto Principle (80/20 rule), which states that 80% of problems are often caused by 20% of the causes. This helps direct improvement efforts to the areas that will have the biggest impact.

upvoted 1 times

🗨️ **rhsdeal** 2 months, 4 weeks ago

The answer is Pareto, however this is mentioned in either the babok v-3 or v-2 guide. So I would skip this question.

upvoted 4 times

Which of the following involves defining the various threats, determining the extent of vulnerabilities, and devising countermeasures against a possible attack?

- A. Qualitative risk analysis
- B. Risk analysis
- C. Risk assessment
- D. Quantitative risk analysis

Suggested Answer: A

Community vote distribution

C (100%)

🗨️ **Farooq_95** 2 months, 2 weeks ago

B is correct because 'Risk assessment' is a term not used in BABOK v3. It uses terms 'Risk Analysis and Management' and 'Risk Analysis'. Further, from question, it is not clear whether the threat is quantifiable or not. So, qualitative or quantitative analysis cannot be specified.

upvoted 1 times

🗨️ **Inzaghi78** 2 months, 3 weeks ago

Selected Answer: C

Key word "a possible attack"

We are assessing the risk of "a possible attack" So Ans is C

upvoted 2 times

🗨️ **Rabbitsfoot** 3 months ago

Selected Answer: C

BABOK v3 discusses qualitative and quantitative MEASURES in the context of risk assessment, not just in risk analysis. In the broader context of business analysis, these measures are indeed used to assess risks, including defining threats, vulnerabilities, and countermeasures. Therefore, considering the broader understanding of risk assessment within the business analysis domain, options A, B, and D could be acceptable. However, option C, "Risk assessment," is the most specific and direct term that encompasses the process of defining threats, determining vulnerabilities, and devising countermeasures against potential attacks.

upvoted 2 times

🗨️ **NorieRose** 5 months ago

Selected Answer: C

Risk Assessment involves identifying potential threats, assessing vulnerabilities, and developing countermeasures to mitigate risks and enhance security against possible attacks.

upvoted 4 times

🗨️ **Walexiii** 2 years, 4 months ago

why is the answer not B?

upvoted 4 times

🗨️ **OlivierPaudex** 2 years, 3 months ago

Risk analysis is the global term which include both qualitative and quantitative risk analysis. In this case, we are talking about various threats and how to mitigate a possible attack. We are clearly speaking about qualitative risk analysis.

upvoted 3 times

🗨️ **NikolaBA** 1 year ago

sounds legitimate but where in BABOK V3 this has been explained? I couldn't find this justification anywhere!

Which of the following processes measures the maturity level of the security program?

- A. Risk analysis
- B. Risk mitigation
- C. Risk assessment
- D. GAP analysis

Suggested Answer: D

🗨️ **Kajol_2021** Highly Voted 👍 3 years, 2 months ago

Gap Analysis- Less the gap , more is the maturity
upvoted 8 times

🗨️ **Nobita135** Most Recent 🕒 2 weeks, 2 days ago

Selected Answer: D

GAP analysis measures the maturity level of a security program by comparing its current state to a desired future state or established standards. It identifies "gaps" between where the program is and where it needs to be, helping organizations prioritize improvements and align with best practices or compliance requirements.

upvoted 1 times

🗨️ **SDab** 4 months, 1 week ago

Gap Analysis is correct : - <https://www.csoonline.com/article/566123/do-you-know-your-gap.html>
upvoted 3 times

🗨️ **JerryMag4** 6 months, 1 week ago

C. Risk assessment

C. Risk assessment

The process that measures the maturity level of the security program is typically associated with risk assessment. Risk assessment involves identifying, analyzing, and evaluating risks to an organization's information and assets. As part of the risk assessment process, organizations often evaluate the maturity of their security program by assessing how well it addresses potential risks and vulnerabilities.

Why? How did you come to this answer.
upvoted 1 times

A company that specialized in manufacturing vending machines for books has been in business for 10 years. As the e-book and online retailing grow, the company perceived that a change is required to respond to the new emerging market forces. However, the change should focus on reusability as much as possible to reduce expenses. After analyzing the current state with the business subject matter experts, the business analyst (BA) proposed investing in a new business line of vending machines that sell pay per use mobile device phone fast charging stations.

Due to the urgency of this change, the BA was asked to finalize requirements elicitation in the shortest possible time.

Customers who want to utilize the pay per use mobile device fast charging stations may choose one of two features: fully charged (F1) or partially charged (F2). If partially charged is selected, the customer needs to specify their charging needs.

What is the relationship between F1 and F2?

- A. Validate
- B. Derive
- C. Depends
- D. Satisfy

Suggested Answer: B

Community vote distribution

[Removed] Highly Voted 3 years, 6 months ago

I think Depends is the answer - In order to fully charge you should partially charge first.
upvoted 7 times

Nobita135 Most Recent 2 weeks, 2 days ago

Selected Answer: C

In this context, the feature F2 (Partially charged) depends on the selection of the charging option. If the customer selects F1 (Fully charged), F2 (Partially charged) is not needed. However, if the customer selects F2 (Partially charged), additional input (such as specifying the charging level) is required. Therefore, F2 depends on the customer's selection.

upvoted 1 times

MuyiMuyi 3 months, 1 week ago

The Answer is b-- derive. here is an extract from Babok V3 ""2 Relationships
There are several types of relationships that the business analyst considers when defining the traceability approach:

- Derive: relationship between two requirements, used when a requirement is derived from another requirement. This type of relationship is appropriate to link the requirements on different levels of abstraction. For example, a solution requirement derived from a business or a stakeholder requirement."

upvoted 2 times

Inzaghi78 8 months, 3 weeks ago

Selected Answer: C

the relationship between feature F1 (fully charged) and feature F2 (partially charged) is that F2 depends on F1

upvoted 3 times

Inzaghi78 7 months ago

Depends: Less effort. Pg 82

When partially charged, it is easier to implement fully charged

upvoted 1 times

Rabbitsfoot 9 months, 4 weeks ago

Selected Answer: B

BABOK V3 pg 81: Derive: relationship between two requirements, used when a requirement is derived from another requirement. This type of relationship is appropriate to link the requirements on different levels of abstraction. For example, a solution requirement derived from a business or a stakeholder requirement.

upvoted 1 times

🗨️ 👤 **Farooq_95** 10 months ago

Correct Answer is C (Depends)

Justification:

Validate is incorrect because it is relationship between requirement and test case.

Derive is incorrect because fully charged requirement is not derived from partially charged requirement or vice versa.

Satisfy is incorrect because fully charged requirement does not satisfy the partially charged requirement or vice versa. (Satisfy is usually a relationship between a requirement and a design component satisfying the requirement)

Depends (by Effort) is correct because implementing Fully charged requirement would reduce the efforts for implementing partially charged requirement.

upvoted 1 times

🗨️ 👤 **SDab** 10 months, 1 week ago

Answer B : partial charging has been derived from the need to have full charging. (

derived requirement represent a need that can meet the intention of the original requirement)

upvoted 1 times

🗨️ 👤 **HSinghM** 1 year, 9 months ago

Selected Answer: D

Correct, D

upvoted 2 times

🗨️ 👤 **HSinghM** 1 year, 9 months ago

Sorry B

upvoted 1 times

🗨️ 👤 **smyyyy** 2 years, 7 months ago

I will go with elimination .

Validate is not true as it is generally between requirement and test case,

Dependent is not true as two options are independent of each other

Satisfy is relation ship between requirement and solution. here both are alternative solution

hence derive seems to be correct

upvoted 3 times

🗨️ 👤 **OlivierPaudex** 2 years, 9 months ago

Answer B is correct, Derive.

Not C, depends. I think that last sentence is very important : "if partially charged is selected....". It means that if you selected F2, you have to specify your needs, but not that F2 depends on F1.

Not D, satisfy, cause we are not talking about a requirement which should satisfy an implementation or a component. Both F1 and F2 are options working the same way.

upvoted 1 times

🗨️ 👤 **NickMane** 3 years, 4 months ago

F2 seems dependant on some else elements not on F1, so I'd go with d)

upvoted 3 times

🗨️ 👤 **rupakarthik** 3 years, 8 months ago

Depends: relationship between two requirements, used when a requirement depends on another requirement. Types of dependency relationships include:

- Necessity: when it only makes sense to implement a particular requirement if a related requirement is also implemented.

upvoted 4 times

🗨️ 👤 **rhsdeal** 3 years, 9 months ago

Answer is B: V-3 5.1.4.2 Requirements Life cycle Management; Trace requirements; Elements; Relationships - • Derive: relationship between two requirements, used when a requirement is derived from another requirement. This type of relationship is appropriate to link the requirements on different levels of abstraction. For example, a solution requirement derived from a business or a stakeholder requirement.

upvoted 2 times

Ans D

BABOK V-3 3.3.4.1 Plan Business Analysis Governance – Decision Making: The decision-making process defines what happens when teams cannot reach consensus, by identifying escalation paths and key stakeholders who hold final decision-making authority.

-A. Update the requirements doesn't solve the issue as no new/updates to the requirements are mentioned. B. Record the feedback and continue does nothing to ensure the process owner will remain engaged. C. Reviewing the future state provides no benefit.

upvoted 2 times

A project's change in scope is assessed and a newly assigned business analyst (BA) is unsure how to communicate the findings and final decision to the wider stakeholder group.

In which of the following can the BA find this information?

- A. Stakeholder Communications Plan
- B. Business case
- C. Business policies
- D. Governance approach

Suggested Answer: A

Community vote distribution

A (50%) D (50%)

  **rhsdeal** Highly Voted  3 years, 8 months ago

Why Not D? BABOK V-3 3.3.2 pg.37 Plan Business Analysis Governance: A governance process describes how approvals and prioritization decisions are made for requirements and designs. (...) When planning the governance approach, business analysts identify: (...) • who has the authority to approve changes, and • how changes will be documented and communicated.

upvoted 10 times

  **NikolaBA** 1 year, 7 months ago

If D was Governance Plan I would agree with you. but the option is Governance Approach (not Plan). so the answer should be Business Analysis Communication Plan

upvoted 5 times

  **Demo311** 2 months, 2 weeks ago

Change is already approved, decision is made. Question is about how to communicate final decision to stakeholders.

So answer is A

upvoted 1 times

  **[Removed]** Highly Voted  3 years, 6 months ago

Ans D. Pg. 39

Part of change control process.

Determine how changes will be communicated: how proposed changes, changes under review, and approved, declined, or deferred changes will be communicated to stakeholders.

upvoted 8 times

  **Nobita135** Most Recent  2 weeks, 2 days ago

Selected Answer: A

Governance Approach: The governance approach defines decision-making processes, roles, and responsibilities, but it doesn't detail how to communicate findings to the broader stakeholder group.

upvoted 1 times

  **Nobita135** 2 weeks, 2 days ago

Selected Answer: A

The Stakeholder Communications Plan outlines how information will be shared with stakeholders, including the frequency, methods, and responsibilities for communication. It helps the BA determine how to communicate findings and decisions related to the project's change in scope effectively.

upvoted 1 times

  **Demo311** 2 months, 2 weeks ago

Selected Answer: A

3.3.2 The purpose of Business Analysis Governance is to define how decisions are made.

Here the decision is already made.

Question is about how to communicate final decision to stakeholders.

Thus I believe A is a correct answer

upvoted 2 times

  **Ngho** 11 months, 2 weeks ago

It's 'D' 3.3.2. The last bullet point: 'How changes will be documented and communicated' Notice, the question is Project change in scope.

Determine how changes will be communicated

upvoted 2 times

A local manufacturer that serves about 1000 retail stores is experiencing a slow yet steady decrease of its customer base over the last couple of years. Attributing the situation to increased competition, management has hired a team of sales representatives to attract new clients and promote the manufacturer's products.

However, after four months there is still no progress. Management has engaged a business analyst (BA) to investigate this issue.

What should the BA do first?

- A. Perform market research to identify on which competitive advantages the sales team should focus
- B. Create a training program to close potential skill gaps for the sales team
- C. Review historic sales and related data to understand what is happening to the customer base
- D. Identify appropriate training providers and send out a request for proposal

Suggested Answer: C

Community vote distribution

A (50%)

C (50%)

🗨️ 👤 **MJedah** Highly Voted 📌 3 years ago

Ans is C. Attributing the situation to increased competition is an assumption of d management. D BA needs to dig a little deeper to come to a confirmed conclusion on d actual reason behind d decline in customer base and then, proffer more suitable recommendations on appropriate solutions.

upvoted 6 times

🗨️ 👤 **Nobita135** Most Recent 🕒 2 weeks, 1 day ago

Selected Answer: C

Before taking any action, the BA needs to understand the root cause of the issue. Reviewing historical sales data and related information (such as sales performance, customer retention rates, and purchasing patterns) will help identify why the customer base is shrinking. This analysis will provide insight into whether the issue lies in market competition, internal sales processes, product offerings, or customer satisfaction.

upvoted 1 times

🗨️ 👤 **Demo311** 2 months, 2 weeks ago

Selected Answer: C

C

As first BA needs to find the root cause

upvoted 2 times

🗨️ 👤 **Farooq_95** 8 months ago

Selected Answer: A

C is correct because data mining needs to be done on the historic data including the data of four months after hiring of sales representative to discover insights into potential reasons for decline in customer base. Based on that analysis, further actions can be recommended.

A is incorrect because market research works well to focus on competitive advantages once BA is sure that the exact reason for decline in customer base is focusing the wrong competitive strategies that is leading to unfruitful results and to be sure, analysis of sales and historic data needs to be done.

upvoted 1 times

🗨️ 👤 **giorgib22** 1 year ago

market research is time consuming and require knowledge and finances, and the question is asked what to do first, of course, looking into the data first is right decision.

upvoted 1 times

🗨️ 👤 **xiaoyangwu** 1 year, 2 months ago

Selected Answer: C

After 3 months there is still no progress, this indicates that the root cause of decrease may not competitive, maybe there are some other reasons. So I think A is not correct.

I prefer C, as it need to find the root cause firstly.

upvoted 1 times

🗨️ **Dillon91** 1 year, 11 months ago

I believe A: V3 pg 63 used as a source of business analysis information by comparing a specific process, system, product, service, or structure with some external baseline, such as a similar organization or baseline provided by an industry association. Market analysis is used to determine what customers want and what competitors provide
upvoted 1 times

🗨️ **Deudo_** 2 years, 3 months ago

We don't need to review historic sales and related data anymore, we already have a declining trend as stated in the question -' However, after four months there is still no progress' The next logical thing to do is to perform market research. According to Babok 10.4.2 Market analysis involves researching customers in order to determine the products and services that they need or want, the factors that influence their decisions to purchase, and the competitors that exist in the market. The objective of market analysis is to acquire this information in order to support the various decision-making processes within an organization. Market analysis can also help determine when to exit a market. It may be used if partnering, merging, or divesting are viable alternatives for an enterprise.
upvoted 4 times

🗨️ **MyBJ** 1 year, 4 months ago

Correct answer is C.

I thought in this line also, especially as this is a tricky question. The question however did not state if the BA was to investigate the failure of the Sales team or the declining customer base which suggests that the A option is not fool-proof. Option C looks like a safer and more reasonable answer as it can capture both the sales efforts and customer retention.

My final answer is C.

upvoted 1 times

🗨️ **Nekdre** 2 years, 11 months ago

A should be the answer because market research involves researching customers in order to determine the products and services that they need or want , and the factors that influence their decisions to purchase and the competitors that exist in the market

Hey Saeedddd, can you validate why answer A - I was leaning towards option C.

upvoted 2 times

A new project has to implement a cyber security release in China, Italy, Germany, the United States, and Canada. The project is a \$5 million initiative and must 'go live' in production in all countries on the same day and time to be effective. Which of the approaches mentioned is suitable for this project based on the size and complexity?

- A. An agile and iterative approach
- B. A waterfall and dynamic approach
- C. A kanban and predictive approach
- D. A proven and tailored analysis approach

Suggested Answer: A

BABOK V-3 11.1 pg. 369 Agile Perspective: -A. Best Possible; Requirements are developed through continual exploration and analysis of the business needs. It is important to note that though most agile approaches are iterative, not all iterative approaches are agile. There are also several agile

approaches that are not iterative, such as the kanban method.

C. Possible: Pg. 374 There are also several agile approaches that are not iterative, such as the kanban method. KANBAN means: Does not require fixed iterations. Work moves through the development process as a continuous flow of activity. A key feature is to limit the amount of work underway at any one time (referred to as the work in progress limit or WIP). The team works only on a fixed number of items at any one time and work may begin on a new item only when it is required to maintain flow downstream and after the previous item has been completed.

D. Very generic answer, proven means identically done before; tailored means customized these are contradictory, so NO; B. Waterfall not mentioned in BABOK v-3, so NO;

upvoted 6 times

Nobita135 Most Recent 2 weeks, 1 day ago

Selected Answer: D

Given the size (\$5 million), complexity (multiple countries with different regulations), and the need for a simultaneous global release, a proven and tailored analysis approach is the most suitable. This approach ensures that project management methods are customized based on the specific needs of the project, balancing predictive (waterfall-like) and adaptive (agile-like) techniques where appropriate.

Why the Other Options Are Less Appropriate:

A. An agile and iterative approach:

While agile is great for flexibility and frequent releases, this project requires a single, synchronized global release. Agile's iterative nature would not align well with a hard deadline and regulatory complexities.

B. A waterfall and dynamic approach:

Waterfall is suitable for projects with clear requirements, but the term "dynamic" contradicts the rigid structure of waterfall. This combination is unclear and unlikely to work well.

upvoted 1 times

Farooq_95 2 months, 1 week ago

Selected Answer: A

Agile and Iterative approach is correct. As per BABOK v3 11.1.1.2, agile principles and practices are often successfully applied in initiatives where:

- there is a clear commitment from the customer and engagement by empowered subject matter experts (SMEs),
- the business need or proposed solution is complex or complicated, and
- business needs are changing or unknown and are still emerging.

In this scenario, the project is complex because it requires implementation in various countries at the same time and involves a complex domain of cyber security. Secondly, the business needs may still be unknown and will emerge with time after implementation. Given these facts, agile approach works best.

C (100%)

 **km_45** Highly Voted 3 years, 5 months ago

C might be correct: p115 - If current policies are insufficient to meet the business need, the business analyst identifies the changes necessary for the desired future state.

Policies are a common source of constraints on a solution or on the solution space. Business policies may mandate what solutions can be implemented given certain levels of approval, the process for obtaining approval, and the necessary criteria a proposed solution must meet in order to receive funding. In some instances, a change to an existing policy may open up alternative solutions that would not otherwise be considered.

upvoted 11 times

 **siliconvalleykam** Highly Voted 3 years, 5 months ago

A. Modify the solution to comply with the policies

upvoted 6 times

 **Rabbitsfoot** Most Recent 3 months ago

Selected Answer: C

BABOK 6.2.4.7

upvoted 1 times

 **Farooq_95** 4 months, 1 week ago

D seems correct. Refer BABOK 6.2.4.7 If current policies are insufficient to meet the business need, the business analyst identifies the changes necessary for the desired future state.

So, business analyst needs to identify changes in policies that help achieve the desired value and to change these policies, he/she needs to seek approval on changes.

upvoted 1 times

 **OlivierPaudex** 1 year, 8 months ago

BABOK 6.2.4.7

In some instances, a change to an existing policy may open up alternative solutions that would not otherwise be considered

D. Risk Analysis and Management: used to identify, assess, and manage conditions or situations that could disrupt the elicitation, or affect the quality and validity of the elicitation results. The plans for the elicitation should be adjusted to avoid, transfer, or mitigate the most serious risks. Pg 60
upvoted 15 times

Qualms 3 years, 3 months ago

Yes, Risk Analysis & Management
upvoted 2 times

OlivierPaudex Highly Voted 2 years, 3 months ago

Tricky question. Collaborative games (B) and Risk Analysis and Management (D) could be both right answers. But I will go with "B", cause the sentence "avoid disrupting the workshop" and the definition of Collaborative games is "stimulate teamwork by temporarily immersing participants in a safe and fun situation", exactly here to avoid disruption.

Risk Analysis and management is more a technique to get users engaged, not to avoid disruption

upvoted 5 times

Nobita135 Most Recent 2 weeks, 1 day ago

Selected Answer: D

When the BA learns that a workshop attendee may be unhappy about the project's impact on their work, this presents a risk that could disrupt the workshop. To address this proactively, the BA should use Risk Analysis and Management to:

- Identify the risk (potential disruption by the unhappy attendee).
- Assess the likelihood and potential impact.
- Develop a mitigation plan (e.g., meeting with the person in advance, clarifying concerns, adjusting the agenda, or having a conflict resolution strategy ready).

upvoted 1 times

Rjbirdhanju 3 weeks, 3 days ago

Page 73, V3 Stakeholders are more likely to support change if business analysts collaborate with them and encourage the free flow of information, ideas, and innovations.

Genuine stakeholder engagement requires that all stakeholders involved feel that they are heard, their opinions matter, and their contributions are recognized.

Collaboration involves regular, frequent, and bi-directional communication.

Collaborative relationships help maintain the free flow of information when obstacles and setbacks occur, and promote a shared effort to resolve problems and achieve desired outcomes.

I think the answer is D- Formal/Predictive Approach, as Banking is a highly regulated industry with High Risk and predictive approaches are more suitable for this type of industry.

upvoted 15 times

 **786NB786** Highly Voted 2 years, 6 months ago

D= A formal approach with planned team interaction, agreed upon documentation deliverables requiring formal approval, and front-loaded requirements development

As per page 27 Figure 3.1.1

upvoted 6 times

 **Farooq_95** Most Recent 2 months, 2 weeks ago

Selected Answer: D

A formal predictive approach is the correct option. This is because Bank is a highly regulated and a high-risk industry and the bank's project of expansion into new markets calls for compliance, security, business and other aspects to be considered. Further, bank cannot afford to bear upfront uncertainty in the project. Based on these facts, formal (or predictive) approach works best which focus on minimizing upfront uncertainty and ensuring that the solution is defined before implementation begins in order to maximize control and minimize risk. (BABOK v3 3.1.4.1 Para 2)

upvoted 3 times

 **moririn** 1 year, 1 month ago

Selected Answer: B

I think B is answer because , "expand into new markets" means Agile approach is suitable.

upvoted 1 times

While reviewing a subset of requirements with stakeholders, a business analyst (BA) finds a requirement that does not deliver benefit to any of the stakeholders.

After much discussion, the stakeholders decide that the requirement does not align with the solution scope.

What recommendation will the BA make?

- A. Update the solution design
- B. Re-evaluate the future state
- C. Change the solution scope
- D. Eliminate the requirement

Suggested Answer: D

Reference: IIBA BABOK v3

Community vote distribution

D (50%)

A (50%)

🗨️ **Nobita135** 2 weeks, 1 day ago

Selected Answer: D

If a requirement does not deliver any benefit to stakeholders and does not align with the solution scope, the most logical action is to eliminate the requirement. Keeping such a requirement would add unnecessary complexity, increase project costs, and waste resources.

An innovative pizza restaurant announces a new pizza topping each week. Once advertised, the new topping on the regular dough constitutes the sole pizza type offered during the week. No other pizza toppings are offered.

Which of the following processes is a strong candidate to be addressed while planning for requirements reuse?

- A. Dough preparation
- B. Toppings preparation
- C. Topping recipes
- D. Ad images

Suggested Answer: C

Reference: IIBA BABOK v3 (54, 55)

Community vote distribution

🗨️ **Sri3105** Highly Voted 3 years, 9 months ago

I think this has to be dough preparation since that's going to be the same even when the topping changes, hence dough preparation is a strong candidate for requirement reuse.

upvoted 28 times

🗨️ **OlivierPaudex** 2 years, 9 months ago

Not sure! Regular dough is always used, for every pizza every week.

In other hands, a reusable requirement is something that you create, store, label for a future use. Typically, toppings are an ideal candidate to be reusable.

I will follow the correct answer: C

upvoted 2 times

🗨️ **Nobita135** Most Recent 2 weeks, 1 day ago

Selected Answer: C

In the scenario described, the pizza restaurant announces a new topping each week, and the topping recipes are likely to change frequently. To manage these changes effectively and ensure consistency, reusing requirements related to the topping recipes (such as the preparation and handling of different toppings) would be a key area of focus. By standardizing and reusing these recipes, the restaurant can ensure efficient operations and consistent quality without starting from scratch each time a new topping is introduced.

upvoted 1 times

🗨️ **Demo311** 2 months, 2 weeks ago

Topping recipes is the strongest candidate for requirements reuse.

But question is about process. Recipe is not a process

Wording in question should be changed

upvoted 1 times

🗨️ **Rabbitsfoot** 9 months ago

Selected Answer: B

I've changed my perspective on this.

Correct answer is B. Toppings preparation

While topping recipes change weekly, the process of preparing toppings might involve reusable requirements that are more general and less subject to revision during changes. This aligns with the principle outlined in BABOK that requirements expressed in a general manner, without direct ties to a specific solution, tend to be more reusable. Therefore, focusing on the process of toppings preparation would likely yield the highest potential for requirements reuse in this scenario.

upvoted 2 times

🗨️ **Rabbitsfoot** 9 months, 3 weeks ago

Selected Answer: C

While other processes such as dough preparation (Option A), toppings preparation (Option B), and ad images (Option D) are also important, they are less directly tied to the primary objective of introducing new and unique pizza offerings each week. Therefore, topping recipes are the strongest candidate for addressing requirements reuse in this context.

upvoted 1 times

  **Rabbitsfoot** 9 months ago

I've changed my perspective on this.

Correct answer is B. Toppings preparation

While topping recipes change weekly, the process of preparing toppings might involve reusable requirements that are more general and less subject to revision during changes. A business analyst (BA) is in the process of allocating requirements to various releases of a solution.
On what should the BA base requirements to maximize the value of the solution?

- A. Priority set by stakeholders
- B. Available resources
- C. Timing of the release and its impact on business
- D. Components in scope for that release

Suggested Answer: D

Reference: IIBA BABOK v3 (193)

Community vote distribution

C (67%) D (33%)

🗳️ **[Removed]** Highly Voted 3 years ago

Ans is C. Pg 155.

The value of a solution might vary depending on how requirements are implemented and when the solution becomes available to stakeholders. The objective of allocation is to maximize that value.

upvoted 8 times

🗳️ **kevinhahaha** Highly Voted 3 years, 4 months ago

Should be C

upvoted 6 times

🗳️ **Farooq_95** Most Recent 2 months, 2 weeks ago

Selected Answer: C

Timing of the release and its impact on business is correct. As per BABOK v3 7.5.4.3, the value of a solution might vary depending on how requirements are implemented and when the solution becomes available to stakeholders. The objective of allocation is to maximize that value. The "when solution becomes available" represents the timing of release and "how requirements are implemented" represents the impact on business value.

upvoted 1 times

🗳️ **Rabbitsfoot** 3 months ago

Selected Answer: C

changed my mind - correct answer is C. There is no specific reference to whether the scope has been defined or not... therefore the most suitable answer is C. The BA can maximize the overall value of the solution by aligning requirements with the bss goals and objectives for each release.

upvoted 1 times

🗳️ **Rabbitsfoot** 3 months, 2 weeks ago

Selected Answer: D

If there's no predefined scope for each release, then considering the components in scope for that release (Option D) becomes a more significant factor in the requirements allocation process. In such a scenario, the BA would need to assess which requirements and components can feasibly be included in each release based on factors like available resources, technical dependencies, and project timelines. By focusing on the components in scope for each release, the BA ensures that the allocated requirements align with the immediate goals and objectives of that particular release.

Therefore, in the absence of a predefined scope for each release, Option D becomes a more appropriate consideration for maximizing the value of the solution through effective requirements allocation.

upvoted 1 times

🗳️ **Rabbitsfoot** 3 months ago

changed my mind - correct answer is C. There is no specific reference to whether the scope has been defined or not... therefore the most suitable answer is C. The BA can maximize the overall value of the solution by aligning requirements with the bss goals and objectives for each release.

upvoted 1 times

🗳️ **Wlkkkk** 1 year, 6 months ago

should be C. if you read the question carefully 'BA is in the process of allocating requirements to various releases of a solution' - this means no scope for each release yet.

upvoted 1 times

  **OlivierPaudex** 2 years, 3 months ago

Should be D

Requirements allocation is the process of assigning requirements to solution components and releases to best achieve the objectives.

Then, components should be in release to be allocated

upvoted 2 times

  **OlivierPaudex** 1 year, 7 months ago

I change my mind.

BABOK 7.5.4.3. Requirement may be allocated between organizational unit, job function, solution components, or releases of a solution.

requirements allocation: The process of assigning requirements to be implemented by specific solution components , option D

upvoted 1 times

  **kevinhahaha** 3 years, 4 months ago

Confuse on the question, what's asking for?

From 7.5.3

Requirements allocation is the process of assigning requirements to solution components and releases to best achieve the objectives. Allocation is supported

Define Design Options

by assessing the trade-offs between alternatives in order to maximize benefits and minimize costs. The value of a solution might vary depending on how requirements are implemented and when the solution becomes available to stakeholders. The objective of allocation is to maximize that value.

upvoted 1 times

A team is working on a user privilege and access control system. A business analyst (BA) selects use cases as the technique for requirements specification.

What is the relationship between use cases "Create a role" and "Find a role" when there is a high level of formality?

- A. Validate
- B. Derive
- C. Necessity
- D. Satisfy

Suggested Answer: C

Community vote distribution

B (100%)

🗨️ **rupakarthik** Highly Voted 3 years, 6 months ago

• Necessity: when it only makes sense to implement a particular requirement if a related requirement is also implemented.

BABOK Page-82

I go w B

upvoted 1 times

🗨️ **Nobita135** 2 weeks, 1 day ago

Selected Answer: C

In a user privilege and access control system, "Create a role" and "Find a role" have a necessity relationship because the ability to find a role is necessary to perform certain actions related to roles, such as modifying or assigning them. If a user cannot find an existing role, managing roles effectively becomes impossible.

This type of relationship indicates that one use case ("Find a role") is required or essential for the other use case ("Create a role") to function correctly in the system's overall workflow.

upvoted 1 times

🗨️ **Rabbitsfoot** 3 months ago

Selected Answer: B

Based on V3, the correct relationship between "Create a role" and "Find a role" when there is a high level of formality would be: Option B: Derive This is because the "Find a role" requirement is derived from the "Create a role" requirement. In a formal context, the ability to find a role typically depends on roles being created first. Therefore, "Find a role" is derived from the prerequisite action of "Create a role."

pg81: Derive: relationship between two requirements, used when a requirement is derived from another requirement. This type of relationship is appropriate to link the requirements on different levels of abstraction. For example, a solution requirement derived from a business or a stakeholder requirement.

upvoted 1 times

🗨️ **[Removed]** 10 months, 1 week ago

C - Necessity "Find a role" is needed only if "Create a role" is implemented

upvoted 2 times

🗨️ **OlivierPaudex** 2 years, 3 months ago

"Find role" use case depends on "Create role". If the role doesn't exist, then it's impossible to find it. It's clearly not a derived relationship.

Necessity is a depending relationship, so yes, answer C is correct

A business analyst (BA) works for a financial institution that wants to acquire new systems and migrate all future business operations to the new systems. The BA is responsible for performing a gap analysis and has reviewed the current state of systems. What is the next task that the BA needs to do to complete the gap analysis?

- A. Identify performance measures
- B. Define the future state capabilities
- C. Categorize risks factors
- D. Select the stakeholder engagement approach

Suggested Answer: B

Reference: IIBA BABOK v3 (111)

Community vote distribution

B (100%)

 **Farooq_95** 2 months ago

Selected Answer: B

BABOK v3 6.4.4.2 states that to perform gap analysis, both current state and future state should be defined.

As current state is already defined here, hence future state should be the next step for BA to define in order to proceed to gap analysis.

upvoted 2 times

 **Shreejith** 1 year, 11 months ago

Selected Answer: B

A gap analysis identifies the difference between current state and future state capabilities. To perform gap analysis, both current state and future state should be defined.

upvoted 2 times

A business analyst (BA) has completed the prioritization of requirements with various risk-averse stakeholder groups. Several requirements conflict with a regulatory requirement that, if not implemented, will result in a fine from a regulatory body. What should the BA do?

- A. Measure the value of the other requirements against the penalty of not meeting the regulatory requirement
- B. Compare the regulatory requirement to the recommended solution
- C. Determine a means to work around the regulatory requirement
- D. Inform the stakeholders that the regulatory requirement takes precedence over other requirements

Suggested Answer: C

Community vote distribution

D (100%)

🗨️ **siliconvalleykam** Highly Voted 2 years, 5 months ago

Answer is D

upvoted 17 times

🗨️ **Nobita135** Most Recent 2 weeks, 1 day ago

Selected Answer: D

When a regulatory requirement conflicts with other business requirements, the regulatory requirement must take precedence, as failing to comply could result in legal penalties, fines, or even operational shutdowns. Regulatory requirements are typically non-negotiable constraints imposed by external authorities that the organization must adhere to, regardless of other business priorities.

The business analyst (BA) should inform the stakeholders about the importance of regulatory compliance and adjust the project scope or priorities accordingly. This ensures the organization avoids fines and maintains legal compliance.

Answer is D

upvoted 1 times

A large company has thousands of geographically dispersed employees and dozens of IT systems. Multiple business analysts (BAs) work in parallel on various requirements with different stakeholders. When considered in isolation, the requirements look meaningful and valuable to those who approved them. However, when it comes to implementation, some of the requirements appear to be contradicting each other. A lead BA recognizes that adding some traceability information would help uncover such conflicts early in the process.

To what should the BA trace the requirements?

- A. Stakeholder tasks
- B. Business needs
- C. Organizational functions
- D. Solution components

Suggested Answer: D

Reference: IIBA BABOK v3 (89, 90)

Community vote distribution

B (57%) D (43%)

  **[Removed]** Highly Voted  10 months, 1 week ago

Selected Answer: B

Tracing the requirements back to the business needs ensures that the proposed solutions are aligned with the goals. By doing so, conflicts and contradictions between different requirements can be identified early on.

Tracing requirements to solution components means focusing on the technical aspects of how a solution will be built.

upvoted 6 times

  **Rabbitsfoot** Most Recent  3 months, 2 weeks ago

Selected Answer: D

keywords: "when it comes to implementation, some of the requirements appear to be contradicting each other." In this case, considering the specific stage of the process and the nature of the conflicts being encountered, leads us to the most appropriate option, which is tracing requirements to solution components.

upvoted 1 times

  **Jules_Cmrfrd** 8 months ago

Selected Answer: B

it's no need to trace requirements to solution components, the team will still have the conflicts. The BA should check on the business needs, and they will find the contradictions on the requirements

upvoted 1 times

  **SRK2023** 1 year ago

There are conflicting requirements (there is no mention of any solution components even built or designed yet) and if traced back to business needs, the conflicts can be discovered early on. The statement '...early in the process' also gives us a clue that this is referring to Business needs (first thing defined in the requirements process) as Solution Components come in the picture much later. I believe B is the most befitting answer to the question.

upvoted 3 times

  **Atzewine** 1 year, 3 months ago

Selected Answer: D

Traceability is used to help ensure that the solution conforms to requirements... page 79 Babok v3.

Requirements: may be traced to other requirements (including goals, objectives, business requirements, stakeholder requirements, solution requirements, and transition requirements), solution components, visuals, business rules, and other work products.

• Designs: may be traced to other requirements, solution components, and other work products.

page 80

upvoted 2 times

  **Atzewine** 1 year, 3 months ago

In traceability, you have two type of relationship.

--Between requirements (Derive and depends)

--Between requirements and work product (Satisfy and validate).

8.1.4.3- Option B-Pg 168-Collect performance measures>Frequency timing
upvoted 9 times

 **Nobita135** Most Recent 2 weeks, 1 day ago

Selected Answer: B

When using statistical sampling to evaluate the number of customer calls resolved per hour, the frequency and timing of data collection are crucial factors. The business analyst (BA) needs to determine:

- Frequency: How often data is collected (e.g., hourly, daily, weekly).
- Timing: When data is collected (e.g., peak vs. off-peak hours).

By considering these factors, the BA can ensure that the sample data is representative of real-world performance. This helps avoid skewed or biased results, ensuring that any conclusions drawn about call resolution rates are accurate and reliable.

upvoted 1 times

 **Farooq_95** 2 months, 2 weeks ago

Selected Answer: A

Metrics and KPIs is correct answer. As per BABOK v3 8.1.4.3, when defining performance measures (which may be called as KPIs or metrics), business analyst may employ basic statistical sampling concepts. So reversely, when employing basic statistical sampling concepts, BA need to consider defining performance measures.

upvoted 1 times

 **Farooq_95** 2 months, 2 weeks ago

Frequency and timing needs to be considered when collection performance measures data. (BABOK v3 8.1.4.3), not when using basic statistical sampling concepts.

upvoted 1 times

 **DonSim** 2 months, 3 weeks ago

B: BABOK Pg 168, Element 3: Frequency and Time. And the question was specific on basic statistical sampling concepts.

upvoted 1 times

 **Rabbitsfoot** 3 months, 2 weeks ago

Selected Answer: A

While frequency and timing (Option B), financial analysis (Option C), and benchmarking and market analysis (Option D) may also provide valuable insights, they are not specifically focused on basic statistical sampling concepts, which are more directly applicable to measuring and evaluating performance metrics such as the number of customer calls resolved per hour. Therefore, Option A is the most relevant choice in this context.

upvoted 2 times

 **Rabbitsfoot** 3 months ago

changing my mind... going with B.

🗨️ 👤 **Jules_Cmfrd** 8 months ago

Selected Answer: B

8.1.4: When defining performance measures, business analysts may employ basic statistical sampling concepts:

- Frequency and Timing: the frequency and timing with which measurements are taken may have an effect on the outcome.

upvoted 1 times

🗨️ 👤 **Yichun** 1 year ago

8.1.4: When defining performance measures, business analysts may employ basic statistical sampling concepts.....

When collecting performance measures, business analysts consider:

- Volume or Sample Size: a volume or sample size appropriate for the initiative is selected. A sample size that is too small might skew the results and lead to inaccurate conclusions. Larger sample sizes may be more desirable, but may not be practical to obtain.

- Frequency and Timing: the frequency and timing with which measurements are taken may have an effect on the outcome.

- Currency: measurements taken more recently tend to be more representative than older data.

upvoted 2 times

🗨️ 👤 **Atzewine** 1 year, 3 months ago

Selected Answer: A

Frequency and Timing is not a technique. But in Metrics and Key Performance Indicators (KPIs) you can use Frequency and Timing as base. So answer is A.

Metrics and key performance indicators measure the performance of solutions, solution components, and other matters of interest to stakeholders (like Frequency and Timing).

upvoted 3 times

🗨️ 👤 **[Removed]** 10 months, 1 week ago

The word 'technique' is not mentioned in the question

I go with A

upvoted 1 times

 **Nobita135** 2 weeks, 1 day ago

Selected Answer: D

If the solutions team cannot accurately assess the proposed implementation approaches, the likely reason is that the requirements and design options lack sufficient detail. Without clear, detailed requirements and well-defined design specifications, the team cannot evaluate the feasibility, risks, or trade-offs of each approach.

For example, the team might be unsure about:

- Technical feasibility of monitoring blood sugar.
- Integration challenges with the existing product.
- Resource and cost implications for each approach.

Clear, well-documented requirements and designs are critical for the team to make informed decisions and choose the most appropriate solution.

upvoted 2 times

 **Farooq_95** 2 months ago

Selected Answer: A

BABOK v3 7.6.4.4 states "Each design option is assessed based on the potential value it is expected to deliver. At any point in analyzing the design options, it may become necessary to re-evaluate the initial allocation of design elements between components." Hence, when solution

team fails to find allocation of proposed solutions to requirements, they will be unable to identify merits of solution in the context of requirements to be satisfied. Hence, A is correct.

upvoted 1 times

🗨️ 👤 **Farooq_95** 2 months ago

C is incorrect because if business needs are unclear to solution team, they would not know 'why the solution is needed?' rather than the inability to access the merits of solution. (BABOK v3 6.1.2)

D is also incorrect. While details could help assess more objectively the merits of solutions but detailing will not help the solution's team unless they include allocation with the requirements so that solution team may understand how proposed solutions would satisfy stated requirements.

upvoted 1 times

🗨️ 👤 **Farooq_95** 2 months ago

C is Correct because if business needs are unclear to solution team, they would not know 'why the solution is needed?' and would be inability to access the merits of solution proposed by BA (BABOK v3 6.1.2).

upvoted 2 times

🗨️ 👤 **Farooq_95** 2 months ago

Sorry, C is correct. If the business needs, despite being identified and finalized by the BA and product owner, are still unclear to the solutions team, it would hinder their ability to understand the objectives and priorities behind each proposed solution. Without a clear understanding of the business needs and objectives, the team may struggle to evaluate the potential effectiveness or suitability of the proposed approaches

upvoted 2 times

🗨️ 👤 **fepecy** 10 months, 1 week ago

At first thought Ans. A appears correct, then again in BABOK v.3 Pg 155 "Requirements allocation typically begins when a solution approach has been determined, and continues until all valid requirements are allocated. Allocation typically continues through design and implementation of a solution." In the question, multiple solution approaches have been defined already as further buttressed by the inability of the solution's team to accurately assess the merits of each of the PROPOSED SOLUTIONS>(*Note solution approaches are available) so the correct answer is C because at this point the solution team needs to assess the solutions to the rationale(the business need) and if the business need isn't clear enough proper assessment wouldn't be possible.

upvoted 3 times

🗨️ 👤 **SavvyBA** 2 years, 7 months ago

It's C, key word is "merits" which is another term that means "why", and "why" comes from business needs related to business requirements.

upvoted 4 times

🗨️ 👤 **semeg** 9 months, 3 weeks ago

Yes, each of the solutions were analysed but the merits for all could not be accurately assessed, which means there is a missing link to All: - Business needs are unclear (C)

🗨️ 👤 **ccie_cbap** 3 years ago

Answer is A- as it is logical for the preceding action (Finalize R&D) mentioned in the question.

upvoted 3 times

🗨️ 👤 **rupakarthik** 3 years, 2 months ago

i believe C is right.If requirements are not allocated to solution (Option A) then assessing design options is not possible since the question states that solutions team unable to accurately assess the options means need is not clear to them because the best option should address the need.

Each design option is assessed based on the potential value it is expected to deliver. At any point in analyzing the design options, it may become necessary to re-evaluate the initial allocation of design elements between components. The reasons for re-evaluation include better understanding of the cost to implement each component and to determine which allocations have the best cost-to-benefit ratio. Page-159 Business analysts recommend the option or options deemed to be the most valuable solution to address the need. It is possible that none of the design options are worthwhile and the best recommendation is to do nothing. (Page-160)

upvoted 2 times

  **Farooq_95** 2 months ago

You mentioned in your comment that if requirements are not allocated to solution, then need is not clear to solution team. Hence, requirements allocation not done is correct
