Which three features of CloudBoost provide replication to the cloud services? (Choose three.)

- A. Deduplication, encryption, and compression before transfer to the cloud
- B. Low-cost cloud object storage for all backup copies
- C. No on-premises infrastructure required
- D. Fast restore from short-term, on-premises copies
- E. Fast restore from long-term, in-cloud copies

**Suggested Answer:** *ABC*

An implementation engineer must configure NetWorker to move yearly backups to the cloud tier.

Which data-movement policy is created by NetWorker?

- A. age-range
- B. app-based
- C. age-threshold

**Suggested Answer:** *B*

A Dell NetWorker backup administrator wants to identify bottlenecks for a file server with poor backup performance to the AFTD device. The administrator discovers that Client Direct is disabled for the file server.

What happens when Client Direct is enabled?

- A. Backup data is sent directly to the target device, and metadata is sent to the NetWorker server.
- B. Backup data is sent to storage node, and metadata is sent to the NetWorker server.
- C. Backup data is sent directly to the target device, and metadata is sent to the storage node.
- D. Backup data and metadata are sent to the storage node and then to the target device.

**Suggested Answer:** A

Which component is required with Networker on a Public Cloud deployment requiring object storage protection?

- A. CloudBoost
- B. Client Direct on the clients being backed up directly to object storage
- C. PowerProtect DD Virtual Edition

**Suggested Answer:** A

Which NMC user role can add, delete, and modify Networker authentication service local database users and control user access to managed applications, such as NetWorker servers?

- A. Console Security Administrator
- B. Console Application Administrator
- C. Console Application User
- D. Networker Security Administrator

**Suggested Answer:** A

Which types of cloud environments are supported with NetWorker Virtual Edition (NVE) with PowerProtect DD Virtual Edition?

- A. Public and private only
- B. Private and hybrid only
- C. Public, private, and hybrid
- D. Multicloud, hybrid, and public

**Suggested Answer:** *C*

What type of file is used to create a NetWorker vProxy appliance?

- A. ova
- B. exe
- C. iso
- D. zip

**Suggested Answer:** A

Currently there are no comments in this discussion, be the first to comment!

Which step is used to configure NVE as a Storage Node when using the NetWorker Installation Manager?

- A. Installation Progress
- B. Package Selection
- C. Installation Setup

**Suggested Answer:** *B*

What is the outcome when a NetWorker administrator fails to set the admin and root passwords during the deployment of the vProxy appliance in vCenter?

- A. The vProxy appliance automatically generates a password.
- B. The deployment proceeds without any issues.
- C. The vCenter server rejects the deployment.
- D. The deployment will not proceed.

**Suggested Answer:** *B*

A backup administrator wants to use an mminfo utility to run a query for several save sets from a NetWorker client running Windows 2019. However, they receive an error that the mminfo executable is not found.

What is the fastest way to resolve this issue?

- A. Check the server default path environment.
- B. Install the NetWorker Extended Client package.
- C. Use an nsrinfo utility instead.
- D. Run the sfsdump command.

**Suggested Answer:** *B*

An external NMC server that already has a trust established with one NetWorker server, needs to manage other NetWorker servers. Where does an implementation engineer use the nsrauthtrust command for the NMC to manage the other servers?

- A. On the additional NetWorker servers to be managed.
- B. On the external NMC server.
- C. On all the NetWorker servers and the external NMC server.
- D. On the NetWorker server that is providing the authentication services to the external NMC server.

**Suggested Answer:** A

A NetWorker administrator is trying to run a command in a NetWorker environment with LDAP/AD authentication, but the command fails due to insufficient privileges.

What can be done to correct the failure?

- A. Use the `authc_config` to add tenant name and alias to contact the NetWorker Authentication Server and authenticate a user.
- B. Use the `nsrlogin` command to contact the NetWorker Authentication Server and authenticate a user.
- C. Configure the NetWorker Authentication Service and install the Java package.
- D. Register the AD domain user to NetWorker by running the `authc_config` command with the alias `FLR`.

**Suggested Answer:** *B*

What is the only port number that cannot be changed on a vCenter server to enable virtual proxy backups using NetWorker VMware Protection?

- A. 443
- B. 2049
- C. 9090
- D. 161

**Suggested Answer:** A

Which are two of the features of Client Direct in backup operations? (Choose two.)

- A. If a Client Direct backup cannot be performed, a traditional backup using the storage node is performed.
- B. The storage node is not required to manage the devices for the NetWorker clients as it does not handle the data anymore.
- C. Using Client Direct increases bandwidth usage as the backup data travels directly from the client to the storage device.
- D. Client Direct works with both AFTD and PowerProtect DD devices.
- E. Client Direct clients do not require remote access to the storage device.

**Suggested Answer:** AD
