## CERTIFICATION TEST

- [CertificationTest.net](http://CertificationTest.net) - Cheap & Quality Resources With Best Support

Which feature supported by SNMPv3 provides an advantage over SNMPv2c?

- A. Authentication
- B. Transport mapping
- C. GetBulk
- D. Community strings

**Suggested Answer: A**

Currently there are no comments in this discussion, be the first to comment!

You are doing tests in your lab and with the following equipment specifications:

AP1 has a radio that generates a 16 dBm signal.

AP2 has a radio that generates a 13 dBm signal.

AP1 has an antenna with a gain of 8 dBi.

AP2 has an antenna with a gain of 12 dBi.

The antenna cable for AP1 has a 4 dB loss.

The antenna cable for AP2 has a 3 dB loss.

What would be the calculated Equivalent Isotropic Radiated Power (EIRP) for AP1?

- A. 40 dBm
- B. 20 dBm
- C. 15 dBm
- D. -9dBm

**Suggested Answer: B**

Which statement is correct for the HPE Aruba Networking Analytics Engine (NAE) in VSX environment?

- A. NAE is not VSX aware and the python-based agents on each member device store sensor values locally.
- B. NAE is VSX aware and the ruby-based agents on each member device store sensor values remotely.
- C. Each switch in the VSX pair maintains its own independent NAE agent and stores sensor values locally.
- D. NAE is VSX aware and the python-based agents on each member device store sensor values remotely.

**Suggested Answer: C**

Your manufacturing client is deploying two hundred wireless IP cameras and fifty headless scanners in their warehouse. These new devices do not support 802.1X authentication.

How can HPE Aruba Networking enhance security for these new IP cameras in this environment?

- A. MPSK Local will allow the cameras to share a key and the scanners to share a different key.
- B. MPSK provides for each device in the WLAN to have its own unique pre-shared key.
- C. HPE Aruba Networking Central will derive the unique pre-shared keys when the devices are deployed.
- D. Use MPSK Local to automatically provide unique pre-shared keys for devices.

**Suggested Answer: B**

*Community vote distribution*

A (100%)

 **d4ff3ee** 2 months ago

**Selected Answer: A**

No way anyone is going to configure 250 unique keys on 250 headless the devices. While MPSK (with ClearPass) does allow for unique PSK's for every device it is silly in this case. MPSK Local has limits per SSID (24 unique keys?) but makes sense to give cameras a PSK and scanners another key. The answer should be A, not B.

upvoted 2 times

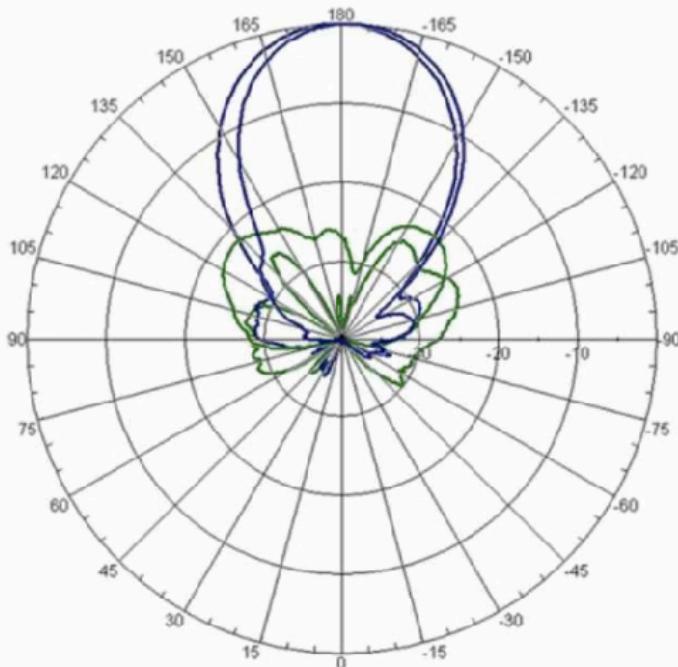

What is a primary benefit of BSS coloring?

- A. BSS color tags improve performance by allowing APs on the same channel to be farther apart.
- B. BSS color tags are applied to client devices and can reduce the threshold for interference.
- C. BSS color tags are applied on the wireless controllers and can reduce the threshold for interference.
- D. BSS color tags are applied to Wi-Fi channels and can reduce the threshold for interference.

**Suggested Answer: A**

Refer to the image.

### Horizontal Pattern

Your customer is complaining of weak Wi-Fi coverage in their office. They mention that the office on the other side of the hall has much better signal. What is the likely cause of this issue?

- A. The AP only supports 5 GHz.
- B. The AP only supports 2.4 GHz.
- C. The AP is an outdoor access point.
- D. The AP is using a directional antenna.

**Suggested Answer: D**

You need to have different routing-table requirements with Aruba CX 6300 VSF configuration.

Assuming the correct layer-2 VLAN already exists, how would you create a new SVI for a separate routing table?

- A. Create a new routing table, and attach VLANs to it.
- B. Create a new VLAN, and attach the VRF to it.
- C. Create a new interface VLAN and attach vrf custom-vrf.
- D. Create a new VRF, and add new SVI under the configuration.

**Suggested Answer:** *D*

Refer to the exhibit.

The screenshot shows the HPE Aruba Networking Central interface. The top navigation bar has tabs for Access Points, Switches, and Gateways, with Access Points selected. Below the navigation is a sub-menu with WLANs highlighted in orange, and other options like Access Points, Radios, Interfaces, Security, Services, System, IoT, and Configuration Audit. The main content area is titled 'Wireless SSIDs' and contains a table with two rows. The columns are: Name (Profile), Security, Access Type, Traffic forwarding mode, and Network Enabled. The first row has a profile named 'secure\_wireless' with security 'wpa3-aes-gcm-256', access type 'Role Based', forwarding mode 'Bridge', and network status 'Yes'. The second row has a profile named 'open\_wireless' with security 'opensystem', access type 'Unrestricted', forwarding mode 'Bridge', and network status 'Yes'.

Name (Profile)	Security	Access Type	Traffic forwarding mode	Network Enabled
secure_wireless	wpa3-aes-gcm-256	Role Based	Bridge	Yes
open_wireless	opensystem	Unrestricted	Bridge	Yes

A company with 1,471 employees has deployed 200 AP-635 access points. To take advantage of the 6 GHz band, the administrator has attempted to configure a new WPA3-OWE SSID in the HPE Aruba Networking Central but is not working as expected.

What would be the correct action to fix the issue?

- A. Change the SSID to WPA3-Enhanced Open.
- B. Change the SSID to WPA3-Personal.
- C. Change the SSID to WPA3-Enterprise (CNSA).
- D. Change the SSID to WPA3-Enterprise (CCM).

**Suggested Answer: A**

How do you allow a new VLAN 100 between VSX pair inter-switch-link 256 for port 1/45 and 2/45?

- A. vlan trunk add 100 in LAG256
- B. vlan trunk add 100 in MLAG256
- C. vlan trunk allowed 100 for ports 1/45 and 1/46
- D. vlan trunk allowed 100 in LAG256

**Suggested Answer:** *D*

Currently there are no comments in this discussion, be the first to comment!

When setting up an AOS-CX VSX pair, which information does the Inter-Switch Protocol synchronize in the configuration created?

- A. RPVST+
- B. SVI
- C. UDLL
- D. MSTP

**Suggested Answer:** *B*

Currently there are no comments in this discussion, be the first to comment!

What is enabled by LLDP-MED?

- A. Voice VLANs can be automatically configured for VoIP phones.
- B. GVRP VLAN information can be used to dynamically add VLANs to a trunk.
- C. iSCSI client devices can set the required MTU setting for the port.
- D. iSCSI client devices can request to have flow control enabled.

**Suggested Answer: A**

Currently there are no comments in this discussion, be the first to comment!

Refer to the output from a CX6100 switch:

```
show interface 1/1/51 transceiver detail
Transceiver in 1/1/51
Interface Name : 1/1/51
Type : 10G-SR / 10G SFP+ SR
Connector Type : LC
Transceiver Status : An HPE pluggable module that is supported in this interface
Wavelength : 850nm
Transfer Distance : 0.00km (SMF), 30m (OM1), 80m (OM2), 300m (OM3)
Diagnostic Support : DCM
Product Number : J9150D
Serial Number : CNXXXXYYNNNN
Part Number : 1990-4635
```

**Status**

Temperature : 20.2188C  
Voltage : 3.3133V

Lane	Tx Bias (mA)	Rx Power (mW/dBm)	Tx Power (mW/dBm)
1	6.3640	0.0001 / -40.00	0.5052 / -2.97

**Recent Alarms:**

Channel 1:  
Rx Power low alarm  
Rx Power low warning  
Rx loss of signal

What is the correct detail that can be observed from the output above?

- A. The dBm values for Tx are too far away from 0, and the link is down.
- B. the dBm values for Rx are within acceptable values, and the link is up.
- C. The dBm values for Rx are too low, indicating that the link is down.
- D. The dBm values for Tx are too high and affect Rx signals.

**Suggested Answer:** C

What is true regarding 802.11k?

- A. It extends radio measurements to define mechanisms for wireless network management of stations.
- B. It reduces roaming delay by pre-authenticating clients with multiple target APs before a client roams to an AP.
- C. It provides mechanisms for APs and clients to dynamically measure the available radio resources.
- D. It considers several metrics before it determines if a client should be steered to the 5GHz band, including client RSSI.

**Suggested Answer: A**

A customer has several hundred wireless IoT devices and is looking for an authentication solution that meets the following requirements:

-The wireless traffic between the IoT devices and the Access Point must be encrypted

-Unique passphrase per device

-Use fingerprint information to perform role-based access

Which solution will address the customer's requirements? (Choose two.)

- A. MPSK and an internal RADIUS server
- B. MPSK Local with MAC Authentication
- C. Local User Derivation Rules
- D. HPE Aruba Networking ClearPass Policy Manager
- E. MPSK Local with EAP-TLS

**Suggested Answer:** AD

Your manufacturing client is deploying twenty headless scanners in their warehouse. These new devices do not support 802.1X authentication. How does the gateway determine the device's role and VLAN derivation-rules when using MPSK Local?

- A. From the device's Calling-Station-ID in the RADIUS Access-Request.
- B. From the HPE Aruba Networking ClearPass enforcement policy based on devices MAC OUI.
- C. It pulls the device roles from HPE Aruba Networking Central during deployment.
- D. From the Type-Length-Value based on the Aruba-MPSK-Key-Name.

**Suggested Answer:** *D*

Currently there are no comments in this discussion, be the first to comment!

A network engineer recently identified that a wired device connected to a CX switch is misbehaving on the network. To address this issue, a new HPE Aruba Networking ClearPass policy has been put in place to prevent this device from connecting to the network again.

Which two steps need to be implemented to allow ClearPass to perform a CoA and change the access for this wired device? (Choose two.)

- A. Confirm that NTP is configured on the switch and ClearPass.
- B. Use Dynamic Segmentation.
- C. Bounce the switchport.
- D. Configure dynamic authorization on the switchport.
- E. Configure dynamic authorization on the switch.

**Suggested Answer:** *CE*

How do you allow a new VLAN 100 between VSX pair inter-switch-link 256 for port 1/45 and 2/45?

- A. vlan trunk add 100 in LAG256
- B. vlan trunk allowed 100 in LAG256
- C. vlan trunk allowed all in LAG256
- D. vlan trunk allowed 100 for ports 1/45 and 1/46

**Suggested Answer: A**

B (100%)

 **davide\_ruggeri** 2 weeks, 5 days ago

**Selected Answer: B**

vlan trunk allowed 100 in LAG 265 should be correct cause the vlan trunk add 100 is not the syntax of AOS-CX

Which method is used to onboard a new HPE Aruba Networking User Experience Insight (UXI) in an existing environment with 802.1X authentication? (The sensor has no cellular connection.)

- A. Use the HPE Aruba Networking installer app on your smartphone to scan the barcode.
- B. Connect the new UXI from an already installed one and adjust the initial configuration.
- C. Use the CLI via the serial cable and adjust the initial configuration.
- D. Use the UXI app on your smartphone and connect the UXI via Bluetooth.

**Suggested Answer: A**

You are helping an onsite network technician bring up an HPE Aruba Networking 9004 gateway with ZTP for a branch office. The technician was told to plug in any port for the ZTP process to start. Thirty minutes after the gateway was plugged in, new users started to complain they were no longer able to get to the internet. One user who reported the issue stated their IP address is 172.16.0.81. However, the branch office network is supposed to be on 10.231.81.0/24. What should the technician do to alleviate the issue and get the ZTP process started correctly?

- A. Move the cable on the gateway to G0/0/1, and add the device's MAC and Serial number in HPE Aruba Networking Central.
- B. Factory default and reboot the gateway to restart the process.
- C. Turn off the DHCP scope on the gateway, and set DNS correctly on the gateway to reach HPE Aruba Networking Activate.
- D. Move the cable on the gateway from port G0/0/1 to port G0/0/0.

**Suggested Answer:** *D*

A company deployed Dynamic Segmentation with their CX switches and gateways. After performing a security audit on their network discovered that the tunnels built between the CX switch and the HPE Aruba Networking gateway are not encrypted. The company is concerned that bad actors could try to insert spoofed messages on the gateway to disrupt communications or obtain information about the network.

Which action must the administrator perform to address this situation?

- A. Enable Enhanced security
- B. Enable Secure Mode Enhanced
- C. Enable Enhanced PAPI security
- D. Enable GRE security

**Suggested Answer: B**

Describe the difference between Class of Service (CoS) and Differentiated Services Code Point (DSCP).

- A. CoS has much finer granularity than DSCP.
- B. They are similar and can be used interchangeably.
- C. CoS is only used to determine CLASS of traffic. DSCP is used only to differentiate between different Classes.
- D. CoS is only contained in VLAN Tag fields. DSCP is in the IP Header and preserved throughout the IP packet flow.

**Suggested Answer:** *D*

A network administrator is attempting to troubleshoot a connectivity issue between a group of users and a particular server. The administrator needs to examine the packets over a period of time from their desktop; however, the administrator is not directly connected to the AOS-CX switch involved with the traffic flow.

What statements are correct regarding the ERSPAN session that needs to be established on an AOS-CX switch? (Choose two.)

- A. On the source AOS-CX switch, the destination specified is the switch to which the administrator's desktop is connected.
- B. The encapsulation protocol used is VXLAN.
- C. On the source AOS-CX switch, the destination specified is the administrator's desktop.
- D. The encapsulation protocol used is GRE.
- E. The encapsulation protocol is UDP.

**Suggested Answer:** *CD*

DRAG DROP -

Select the HPE Aruba Networking stacking technology matching each option. (Option may be used more than once or not at all.)

Answer Area		
<input type="checkbox"/> VSF	<input type="checkbox"/> VSX	Supports up to 10 devices per stack
		<input type="checkbox"/> Supports two devices per stack
		<input type="checkbox"/> Individual ISL links up to 400G are supported
		<input type="checkbox"/> Individual ISL links up to 50G are supported
		<input type="checkbox"/> A maximum aggregate ISL bandwidth of 200G is supported

The administrator notices that wired guest users that have exceeded their bandwidth limit are not being disconnected. Access Tracker in HPE Aruba Networking ClearPass indicates a disconnected CoA message is being sent to the AOS-CX switch.

An administrator has performed the following configuration:

```
Access1(config)# ip dns host cppm.arubatraining.com 10.254.1.23 vrf mgmt
Access1(config)# radius-server host cppm.arubatraining.com key plaintext aruba123 vrf mgmt
Access1(config)# aaa group server radius cppm
Access1(config-sg)# server cppm.arubatraining.com vrf mgmt
Access1(config-sg)# exit
Access1(config)# aaa accounting port-access start-stop interim 5 group cppm
Access1(config)# radius dyn-authorization client cppm.arubatraining.com secret-key plaintext aruba123 vrf mgmt
Access1(config)# radius dyn-authorization enable
```

What is the most likely cause of this issue?

- A. Change of Authorization has not been globally enabled on the switch.
- B. There is a time difference between the switch and the ClearPass Policy Manager.
- C. The SSL certificate for CPPM has not been added as a trust point on the switch.
- D. There is a mismatch between the RADIUS secret on the switch and CPPM.

**Suggested Answer: A**

What are the requirements to ensure that WMM is working effectively? (Choose two.)

- A. All APs need to be from the AP-5xx series and AP-6xx series which are Wi-Fi CERTIFIED 6.
- B. The AP needs to be connected via a tagged VLAN to the wired port.
- C. The Client must be Wi-Fi CERTIFIED for WMM and configured for WMM marking.
- D. The APs and the controller are Wi-Fi CERTIFIED for WMM, which is enabled.
- E. The AOS-10 APs installed have to be converted to controlled mode.

**Suggested Answer:** *CD*

What is the best practice for handling voice traffic with dynamic segmentation on AOS-CX switches?

- A. Switch authentication and local forwarding of the voice traffic.
- B. Central authentication and port-based tunneling of the voice traffic.
- C. Switch authentication and user-based tunneling of the voice traffic.
- D. Controller authentication and port-based tunneling of all traffic.

**Suggested Answer: B**
