You are developing a Dynamics 365 app for a bank. The app must display information about loan accounts and the customers assigned to those items.

You need to model the relationships between objects used by the app.

Solution: Create an entity relationship diagram. Model ownership, one-to-one, one-to-many, and many-to-many relationships as well as fields per entity that are required.

Does the solution meet the goal?

A. Yes

B. No

DRAG DROP -

You are a Dynamics 365 system administrator.

You create a custom entity named Stores in a development Sandbox instance. You populate the custom entity with 185 store locations.

You need to migrate the custom entity and data to a Production instance.

What should you do? To answer, drag the appropriate actions to the correct tasks. Each action may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

You are a Dynamics 365 for Customer Service developer. You create a custom entity and add custom fields to the case entity. You must create a solution to include only the custom entity and case entity changes. The solution must allow import and export without errors. You need to create the solution.

Which two actions should you perform? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. Add an existing unused entity to the solution. Rename the entity to the custom entity. Add fields needed for the case entity.
- B. Create a case entity in the new solution and add the custom fields to the new case entity.
- C. Create the custom entity and custom fields in the case entity within the default solution.
- D. Create the custom entity in the new solution and add the appropriate fields, forms, and views.
- E. Create a new solution and add the entity named Case to the solution. Add the custom fields to the case entity.

You are a Dynamics 365 for Customer Service developer. You import a solution that was exported from the Sandbox instance into the Production instance.

You receive errors during import.

You need to identify and resolve the errors.

What should you do?

- A. Put in a service request to turn tracing on the servers.
- B. Download the log file and review the log file for errors. Fix the cause of the errors and reimport the solution.
- C. Export the solution from the Sandbox instance and re-import the solution into the Production instance.
- D. Open the solution.zip file and read the solution.xml file. Delete the lines in the file that cause the import errors.

[\[All MB-200 Questions\]](#)

DRAG DROP -

You manage Dynamics 365 instances as shown in the exhibit below.

INSTANCES | UPDATES | SERVICE HEALTH | BACKUP & RESTORE | APPLICATIONS

Manage your Dynamics 365 instances

Region:

Instance Type:

NAME	STATE	REGION	INSTANCE TYPE
EMEA	ready	North America (NA)	Production
North America	ready	North America (NA)	Production
North America (Sandbox)	ready	North America (NA)	Sandbox
	instance to configure		Production
	instance to configure		Sandbox
	instance to configure		Sandbox

You configure EMEA as a new Production instance. The EMEA instance must use the same configuration as the North America instance. The EMEA instance must not include any data from North America.

You need to configure the EMEA instance by using the Dynamics 365 administration center.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

You are a Dynamics 365 for Customer Service system administrator for a Sandbox and a Production instance.

A user forgets to sign out from a shared device connected to a Production instance. A second user makes changes to records using the credentials of the first user.

You need to implement user session timeouts to prevent this type of issue from recurring.

Where should you configure this feature?

- A. each instance of Microsoft Azure Active Directory (Azure AD) associated to the tenant
- B. each user in Microsoft 365 admin center
- C. each user in Dynamics 365
- D. each Dynamics 365 instance

You are a Dynamics 365 for Customer Service system administrator. You set up server-side synchronization. You plan to deploy the Dynamics 365 App for Outlook after users have received training.

Users do not have administrator rights.

You need to identify which method you would use to deploy Dynamics 365 App for the trained users.

Which method will accomplish this goal?

- A. Push the App for Outlook to all eligible users from the Dynamics 365 administration center.
- B. Have users install themselves directly from the Dynamics 365 Settings area.
- C. Have users install themselves from the personal Settings area.
- D. Push the App for Outlook to only select users from Dynamics 365 Settings area.
- E. Push the App for Outlook manually or automatically to all eligible users from Dynamics 365 Settings area.

Question #: 21

Topic #: 6

[\[All MB-200 Questions\]](#)

You are a Dynamics 365 for Customer Service system administrator. You receive an email notification that you have reached 80 percent of your Dynamics 365 storage limit.

You perform the following actions to free up space:

- ⇒ Delete known items that use large amount of storage.
- ⇒ Perform bulk deletes on suspended system jobs.

Delete audit logs older than six months old.

-
- ⇒ Delete email attachments older than two years old.

The total storage used indicator shows that the storage amount has not changed after you perform the actions.

You need to determine why the storage amount has not changed.

What is the cause?

- A. The current audit log cannot be deleted.
- B. Email attachments can only be deleted when the associated email is deleted.
- C. The system can take up to 24 hours to update storage information.
- D. Suspended workflows are in a waiting state, therefore cannot be deleted.
