DRAG DROP -

Your company plans to migrate from on-premises to a hybrid cloud deployment.

You are required to make sure that the Microsoft platform used for the migration offers hybrid abilities.

Which of the following options meet the requirement? Answer by dragging the correct option/s from the list to the answer area.

Select and Place:

Options

Microsoft Office Delve

Microsoft SharePoint

Microsoft Yammer

Microsoft Teams

Answer

Microsoft SharePoint

Microsoft Skype for Business

☐ 👤 **Mikmok** `Highly Voted 👍` 9 months, 1 week ago

@Marski, there is no on-premises version of Teams so the answer is still Microsoft SharePoint and Skype for Business

upvoted 20 times

☐ 👤 **kailashsahoo39** `Highly Voted 👍` 2 years, 5 months ago

Microsoft SharePoint, Exchange and Skype for business are the services where hybrid configuration is available. Here in the question only Sharepoint and Skype for business available, so the answer is correct.

Ref:https://opdhsblobprod04.blob.core.windows.net/contents/5c7b3adccc6146cab42d4d0f775bec31/13306910ecb68585715ffd3d59c1631d?skoid=2d004ef0-5468-4cd8-a5b7-14c04c6415bc&sktid=975f013f-7f24-47e8-a7d3-abc4752bf346&skt=2022-12-30T10%3A22%3A16Z&ske=2023-01-06T10%3A27%3A16Z&sks=b&skv=2021-10-04&sv=2021-10-04&se=2023-01-06T03%3A19%3A03Z&sr=b&sp=r&sig=4LNaFW3umMZRj%2FkaEgTM%2BeJLDjmcrWuv3r%2FJSrKvopY%3D

Answer is correct. Sharepoint and Skype for Business

upvoted 4 times

You need to consider the underlined segment to establish whether it is accurate.

All applications will remain in a hybrid environment after migrating to Microsoft Azure.

Select `No adjustment required` if the underlined segment is accurate. If the underlined segment is inaccurate, select the accurate option.

  A. No adjustment required.

  B. Applications that manage sensitive information

  C. Applications where access requires a USB-token device

  D. All legacy applications

Suggested Answer: *B*

Community vote distribution

D (77%) | B (15%) | 6%
☐ 👤 **Contactfornitish** `Highly Voted 👍` 9 months, 1 week ago

`Selected Answer: D`

A is wrong no doubt

B Sensitive information can be protected using AIP or other options

C USB option is available for MFA and there are FIDO devices for serve the purpose

D Legacy application would always be there which are not cloud compatible

D stands correct, some companies do chose B but not because of sensitivity but due to security and legal requirements than sensitivity. For instance, many use cloud for payroll info, what can be more sensitive than that? Or even health info in some cases.

upvoted 16 times

  ☐ 👤 **WellyJC** 2 years, 6 months ago

  The problem with this alternative is the "ALL" legacy application, have to be very careful with generalization on tests. Some legacy application can be migrated to a VM, who knows.

`Selected Answer: D`

D: Legacy

upvoted 1 times

☐ 👤 **zeuge** 1 week, 1 day ago

`Selected Answer: C`

Answer is C

C. Applications that require access to a USB token device:

This is a very strong and specific reason for a hybrid environment. USB tokens often require a physical connection to a client or a local authentication server (on-premises). Even if the application itself is hosted in Azure, the authentication process often has to go through the local infrastructure to detect and validate the USB device. This enforces a hybrid model.

D is wrong

All legacy applications:

This is also an imprecise generalization. Many legacy applications can be fully operated in Azure on virtual machines through so-called "lift and shift" migrations, without requiring a hybrid connection.

upvoted 1 times

☐ 👤 **hchafloque** 5 months, 2 weeks ago

`Selected Answer: D`

It's tricky, USB apps should be considerate as Legacy. So, answer es D.

upvoted 1 times

👤 **SirusB** 8 months, 2 weeks ago

The correct choice is B, focusing on applications that manage sensitive information remaining in a hybrid environment. This decision isn't primarily because these applications can't be protected in the cloud—modern security measures like Azure Information Protection provide robust options. Rather, regulations and specific security requirements sometimes dictate that such sensitive applications stay partially on-premises, adding an extra layer of control and compliance that certain organizations might need.

upvoted 2 times

   👤 **Microfart** 6 months, 3 weeks ago

   I was just about to say this. Although highly sensitive information can be protected in some cases in the cloud. There's compliance issues and requirements they need to adhere to in order to migrate or not...

   upvoted 1 times

👤 **odbjegli** 9 months, 1 week ago

Selected Answer: D

Applications that don't contain sensitive data are good candidates for the cloud; those that do may be a better fit for a hybrid cloud. However, legacy apps - Older versions of some applications that have been around for a long time cannot be moved to the cloud without first carrying out several upgrades. Also, many organizations customized their applications to fit their needs, and they might find it challenging to find a cloud solution suitable for them. Legacy applications need extra care. I'm going with D.

upvoted 7 times

👤 **Tyffty** 9 months, 1 week ago

Why does everyone seem to think that legacy applications can't be hosted on a VM. Let's be real here, those same legacy apps are probably on an ESXi host anyways. There's no specific details on what the apps are so we can't assume that none are able to migrate.

I also don't understand why everyone thinks that sensitive information cannot be protected in Azure. There are tons of ways to protect it. On-premise can be a lot more insecure than cloud. It all depends on how you manage your infrastructure.

The only option that is decent is hardware tokens. There are applications that require hardware tokens for licensing as well not just authentication. Some of those apps don't support usb passthrough. Like someone else mentioned Autocad is a perfect example. Don't get tunnel vision on an answer. Think outside of the box because D and B are not the correct answer that's for sure

No because of the email environment needs to be SaaS.

upvoted 2 times

⊟ 👤 **zillas** 2 years, 6 months ago

A. Yes. The Platform as a Service (PaaS) model would meet the goal of upgrading the email environment and reducing server and application maintenance. PaaS allows developers to build, run, and manage applications without the need for infrastructure management, allowing for a focus on application development and deployment. By using PaaS, the company can offload the maintenance and management of the underlying infrastructure to the cloud provider, which can help reduce the workload for their IT team.

upvoted 2 times

⊟ 👤 **LAvis** 2 years, 4 months ago

the reducing server part is to throw you off. Every cloud service would take some weight off. The words that should move you to thinking it's Saas is "application maintenance". It's not talking about developing or testing applications (which is a PaaS thing), but simply maintenance (aka keeping application up to date and maybe add some new features). SaaS is the correct answer. The way to go with these kinds of questions is not to overthink it too much. Most of the time they use certain keywords to guide you to the right answer.

`Selected Answer: B`

It needs to be SaaS for the email environment.

upvoted 1 times

☐ 👤 **JayLearn2022** 1 year, 9 months ago

The Answer Should be B.

The Exchange Online SaaS offering allows for the current on premises Exchange server to be retired and the email service moved to the cloud reducing server and application maintenance. You will no longer have to Configure or maintain the Operating system of the server or update the Exchange Application software.

You move from a CAPEX to a OPEX model no longer requiring your own data center equipment or Software licenses for Microsoft server and Exchange Server to host email services.

upvoted 1 times

☐ 👤 **Karyo** 2 years, 1 month ago

If it need to be continuously upgraded, it should be SaaS

upvoted 1 times

PAAS-Data & Applications managed by user

upvoted 7 times

👤 **Tamar1000BC** `Most Recent ⊘` 4 months, 4 weeks ago

`Selected Answer: C`

Just a note on Databases : While the underlying database infrastructure is managed by Azure, your IT employees are responsible for managing the data within the databases, including schema design, query optimization, and data integrity.

upvoted 1 times

👤 **ConditionalCondition** 5 months ago

`Selected Answer: C`

In PaaS, the customer is generally responsible for the application and managing the data (e.g., structure and content), but not for the underlying infrastructure or database maintenance. In many cases, the cloud provider takes care of the database platform maintenance itself.

upvoted 1 times

👤 **xTrev** 8 months, 4 weeks ago

Answer a, storage, and answer d, operating system are both included in the platform as a service model. Database management is included in platform as a service model, however the data that fills the database is the customer's responsibility. Platform as a service is designed for application development. Therefore application and database are the responsibility of the consumer. Hopefully the actual exam question is a little more clear as to whether database means the data framework, or the actual data. If only one answer can be selected the obvious answer is c, applications.

`Selected Answer: AD`
A&D for sure. B, possibly. Storage is included both in infrastructure as a service and platform as a service. Operating system is not included in infrastructure as a service, but is in platform as a service. Platform as a service includes database management tools, but not the data to go in the

database which is supplied by the customer. It is designed for application development so the customer is also responsible for the applications. Weather database is part of this question depends on whether database means the database tools, or the database itself.

Answer is Platform as a Service (PaaS)

https://azure.microsoft.com/en-gb/overview/what-is-paas

"PaaS provides all of the capabilities that you need to support the complete web application life cycle: building, testing, deploying, managing and updating within the same integrated environment."

upvoted 19 times

☐ 👤 **xTrev** `Most Recent ⏱` 9 months, 1 week ago

`Selected Answer: B`

It's got to be platform as a service. For a website to work, you just need a bucket with an IP address that can be resolved to a domain name. If it has an IP address, it will need to have some sort of operating system on it which requires infrastructure as a service or platform as a service. Platform as a service decreases administrative overhead significantly and is designed for web application development as other users have stated. I'm going with answer b.

upvoted 2 times

☐ 👤 **SABJED** 10 months ago

PAAS Platform as a service

upvoted 1 times

☐ 👤 **Du_MS900** 1 year, 8 months ago

Para hospedar sites no Microsoft Azure, a escolha mais apropriada é o modelo de Plataforma como Serviço (PaaS). O Azure oferece serviços específicos para hospedagem de sites, como o Azure App Service, que é um exemplo de serviço PaaS que permite implantar, gerenciar e dimensionar aplicativos da web e sites sem se preocupar com a infraestrutura subjacente.

Portanto, a opção correta é:

B. Plataforma como serviço (PaaS)

upvoted 1 times

C (92%) 8%

☐ 👤 **ssvg** 4 months, 1 week ago

Selected Answer: C

VM is an inftastructure

upvoted 2 times

☐ 👤 **xTrev** 9 months, 1 week ago

Selected Answer: C

The two choices that work are platform as a service and infrastructure as a service. I would say infrastructure as a service is correct because I don't believe platform as a service allows you to run VMS inside of your initial virtual machine, AKA nested virtual machines. Infrastructure as a service allows you to run your desired operating system on bare metal which would certainly let us run the Linux VM in question.

upvoted 1 times

☐ 👤 **Du_MS900** 1 year, 8 months ago

Para implantar uma máquina virtual Linux no Microsoft Azure, você deve escolher o modelo de Infraestrutura como Serviço (IaaS). O IaaS fornece a flexibilidade de implantar e gerenciar máquinas virtuais em um ambiente de nuvem, incluindo máquinas virtuais Linux, e permite que você tenha controle sobre o sistema operacional, aplicativos e configurações da máquina virtual.

Portanto, a opção correta é:

C. Infraestrutura como serviço (IaaS)

upvoted 1 times

☐ 👤 **Khiro2023** 1 year, 8 months ago

Deploying and using Virtual Machines (VMa) are Infastructure as a Service (IaaS).

upvoted 2 times

DRAG DROP -

Your company has a Microsoft 365 subscription.

You have been tasked making sure that the IT department users can obtain Office 365 preview features prior to it being deployed to the rest of the company's users.

Which of the following are the two actions that would meet your goal? Answer by dragging the correct options from the list to the answer area.

Select and Place:

Options

Instruct all users to sign up for Office Insider.

Instruct IT users to sign up for Office Insider.

Set the update preference to Targeted release for selected users in the organizational profile.

Set the update preference to Targeted release for everyone in the organizational profile.

Set the update preference to Standard in the organizational profile.

Answer

Suggested Answer:

Options

Instruct all users to sign up for Office Insider.

Set the update preference to Targeted release for everyone in the organizational profile.

Set the update preference to Standard in the organizational profile.

Answer

Instruct IT users to sign up for Office Insider.

Set the update preference to Targeted release for selected users in the organizational profile.

References:

mshain025 Highly Voted 👍 3 years, 2 months ago

Answer provided is correct. There are only two options that are correct. Either all IT users sign up for Microsoft Insider, or an admin sets update preferecne to Targeted release for selected users (IT).

Instruct IT and Set Organizational to Standard

upvoted 2 times

jilly78 1 year, 8 months ago

lets be pedantic, only '..update preference to Targeted release for selected users..' is the correct answer since Q says '..making sure that the IT department users (can) obtain..' no need Instruct them

upvoted 1 times

ExamNiq 1 year, 10 months ago

Remember that there are 2 settings to SEPERATE control Office365 and Microsoft 365 Apps.

Answer seems like you both set the O365 update AND the Office Apps though not from the Admin Portal.

upvoted 1 times

H3mn 2 years, 10 months ago

It's just for the IT dept in the organization, so it must be targeted updated or requested! so the answer is correct

upvoted 3 times

You need to consider the underlined segment to establish whether it is accurate.

To ensure that when a new Microsoft Word feature is available for worker to install as soon as it becomes available, you should subscribe to the Targeted release channel.

Select `No adjustment required` if the underlined segment is accurate. If the underlined segment is inaccurate, select the accurate option.

A. No adjustment required.

B. Standard release

C. Semi-annual

D. Annual

Suggested Answer: *A*

References:

https://docs.microsoft.com/en-us/office365/admin/manage/release-options-in-office-365?view=o365-worldwide

`Selected Answer: A`

Question states: "for worker to install as SOON as it becomes available." Doesn't say what kind of worker. Clearly A

upvoted 12 times

Citmerian `Highly Voted 👍` 3 years, 10 months ago

Standard release is the default option, don't need config. A is correct

upvoted 11 times

DigitalDevil 2 years, 3 months ago

A is suggesting that the sentence is correct 'Targeted release' so no additional config is required. If you meant 'Standard Release' is the answer, then it would be B.

upvoted 6 times

MeJaHe `Most Recent ⊘` 4 months, 3 weeks ago

`Selected Answer: A`

The Targeted Release channel is a feature in Microsoft 365 that allows users to receive early access to new features and updates before they are rolled out to the general public.

upvoted 3 times

JayLearn2022 9 months, 1 week ago

Answer is: A

The underlined segment states that subscribing to the Targeted release channel will ensure that workers can install new Microsoft Word features as soon as they become available. This statement is accurate.

The Targeted release channel is a program that allows users to access new features in Microsoft 365 applications before they are released to the general public. By subscribing to this channel, users can test new features and provide feedback to Microsoft before they are released to everyone.

Therefore, if a company wants its workers to have access to new Word features as soon as they become available, subscribing to the Targeted release channel is a good option.

upvoted 2 times

JayLearn2022 2 years, 3 months ago

B. Standard release: This is the default update channel for Microsoft 365 and it includes all new features and updates that have been tested and validated by Microsoft.

C. Semi-annual: This is a slower update channel that releases new features and updates every six months. It's intended for organizations that want to adopt new features more slowly and have more time to test them.

D. Annual: This is the slowest update channel, with new features and updates released once a year. It's intended for organizations that prioritize stability and do not want to adopt new features quickly.

upvoted 2 times

🔲 👤 **Storm** 9 months, 1 week ago

This is a very bad question... It is about "install" and "word", which means that it is not about release preferences which everybody seems to think. It is about Micosoft 365 installation options.

In Microsoft 365 installation options there is no Targeted release, and no standard release.

We should choose between "Current Channel" and "Current Channel (Preview)"

As none of the answers is correct, I guess one should pretend that they are asking about updates to Onedrive or the admin center and answer according to that. And the answer would then be Targeted (No change)

upvoted 3 times

🔲 👤 **mamash** 11 months ago

Selected Answer: A

To disable targeted release, select Standard release, then select Save changes. So the answer is A

A is correct

upvoted 1 times

🔲 👤 **NoursBear** 1 year, 3 months ago

The big elephant in the room here is that we don't know if Word here relates to Office for the web or M365. As already mentioned below, Targeted Updates does not relate to M365 Apps except those specifically mentioned OneDrive for Business, Office for the Web etc..

In the Admin Center where we set TargetedRelease, it says:

This setting doesn't affect how Microsoft 365 apps, such as Word and Excel, get new features and updates. To choose when Microsoft 365 apps get new features and updates go to Microsoft 365 installation options.

So we don't really have the required information

upvoted 2 times

🔲 👤 **MackD** 1 year, 6 months ago

Answer A:

Targeted release

With this option, you and your users can be the first to see the latest updates and help shape the product by providing early feedback. You can choose to have individuals or the entire organization receive updates early.

👤 **AntonioTech** 2 months, 2 weeks ago

`Selected Answer: B`

Based on the information available, here are the features of MyAnalytics:

It provides employee work and collaboration metrics: MyAnalytics offers insights into how employees spend their time, including metrics on meetings, email, focus time, and after-hours work1.

It provides team work and collaboration metrics: MyAnalytics also provides insights into team collaboration patterns, helping teams improve their productivity and work habits1.

Therefore, the correct options are:

B. It provides team work and collaboration metrics.

D. It provides employee work and collaboration metrics.
Regarding the other options:

It can only be acquired as an added reference-on license: This is not accurate. MyAnalytics is included in certain Microsoft 365 plans and does not necessarily require an additional license1.
It is included in the Office 365 ProPlus license: MyAnalytics is included in specific Microsoft 365 plans, but not necessarily in the Office 365 ProPlus license1.
upvoted 1 times

🔲 👤 **MeJaHe** 4 months, 3 weeks ago

`Selected Answer: B`

MyAnalytics—the fitness tracker for work—will be available to everyone using Office 365 and Microsoft 365 Enterprise and Business suites that include Exchange Online. Previously, MyAnalytics was only available with an Enterprise E5 plan or as an add-on to E1 and E3 plans.

What are Devices blades?

upvoted 16 times

⊟ 👤 **YouriH** 1 year, 3 months ago

Blades can be individual servers or clients that plug into a single cabinet or individual port cards that add connectivity to a switch. A blade is typically a hot swappable hardware device, but a software architecture could use the blade terminology as well.

I see more people complaining about this. This needs to be updated. We are in 2025, this does not follow the current learning path MS900 provides. I read the damn materials many times and never encountered the term "Blade". I'd remember since it's such a distinctive term.

upvoted 3 times

⊟ 👤 **Thispersonsaid** 2 months, 2 weeks ago

`Selected Answer: A`

This is infuriating. These questions are arbitrary, designed to screw you. Every course i followed said that this would be a high level exam and not too technical. I am a marketing rep. damn it, why would i know what the H a blade is? This whole thing is highly deceptive. The MS900 learning path is designed to help you describe something, they do not go into this kind of detail. These types of questions are impossible to answer unless you have preexisting IT experience or actually dive far deeper into the dashboard itself and not only the provided learning materials. The problem here is, it is too much damn information to retain, too many acronyms and technical terms to remember. I failed the first time i took this exam because i panicked with all the stuff i had to remember, in the end the exam won't even cover some subjects. Completely infuriating.

B. The Device Enrollment and Devices blades.

The Device Enrollment blade allows you to configure and manage device enrollment settings, while the Devices blade allows you to view and manage enrolled devices.
upvoted 5 times

☐ 👤 **JayLearn2022** 1 year, 9 months ago

The Answer is correct: B

The navigation model in the Azure portal is built around the concept of blades. Blades are the visualization elements used to describe a resource or to display a form as part of a workflow. Blades open from left to right in a continuous manner, so you always know what your position in a flow is and can always go back.

Unsuited applications mean unsupported apps that you can run it on windows virtual desktop where you can can deploy older version of windows to avoid compatibility issues

upvoted 1 times

☐ 👤 **OyYaGotta** 9 months, 1 week ago

The key to this question is in the definition of "unsuited".

Unsuited Applications:

An unsuited application can be one of the following:

Unauthorized or Unvetted Apps: Applications that users install without proper approval or review by IT or security teams.

High-Risk Apps: Applications with excessive permissions or unclear data handling practices.

Non-Compliant Apps: Applications that violate organizational policies, data protection regulations, or industry standards.

Obsolete or Deprecated Apps: Legacy applications that may have security vulnerabilities or lack support.

Productivity-Draining Apps: Applications that distract users from their primary tasks or reduce productivity.

Malicious or Phishing Apps: Apps designed to steal data, compromise security, or deceive users.

Reference: copilot.

    D. Azure AD Application Proxy.

Suggested Answer: *A*

References:

https://docs.microsoft.com/en-us/azure/active-directory/hybrid/whatis-azure-ad-connect

Community vote distribution

A (100%)

□ 👤 **JayLearn2022** `Highly Voted 👍` 1 year, 9 months ago

A. Azure AD Connect is the correct solution to ensure cloud-based applications use the same credentials as on-premises applications. Azure AD Connect is a tool that synchronizes user accounts between on-premises Active Directory and Azure Active Directory, which enables a user's on-premises password to be used for cloud-based applications. This eliminates the need for users to remember multiple sets of credentials and makes the sign-in process more seamless.

B. Configuration Manager is a solution for managing devices and applications on-premises and is not related to user authentication.

C. Windows AutoPilot is a solution for simplifying the deployment of new devices but is not related to user authentication.

D. Azure AD Application Proxy is a solution for publishing on-premises web applications to the internet and is not related to user authentication.

Microsoft Intune is a cloud-based service that focuses on mobile device management (MDM) and mobile application management (MAM). You control how your organization's devices are used, including mobile phones, tablets, and laptops. You can also configure specific policies to control applications. For example, you can prevent emails from being sent to people outside your organization. Intune also allows people in your organization to use their personal devices for school or work. On personal devices, Intune helps make sure your organization data stays protected, and can isolate organization data from personal data.

Once again, this is outdated. The new term for this correct answer is Entra ID. Please update otherwise it is not in line with the learning path and people will get confused.

  upvoted 3 times

☐ 👤 **AntonioTech** 2 months, 2 weeks ago

`Selected Answer: B`

Initially I thought A but it's B:

Enrolling devices in Microsoft Intune does provide the necessary management and configuration capabilities to ensure that OneDrive for Business is available to users from remote locations. However, simply enrolling the devices in Intune does not automatically make OneDrive for Business available to users. Additional configuration steps are required to ensure that OneDrive is properly set up and accessible. Proper configuration and policy setup within Intune are essential to achieve the goal.

Answer is A

  upvoted 1 times

  ⊟ 👤 **Thispersonsaid** 2 months, 2 weeks ago

  I am done with this site. It is confusing, outdated and does not provide the real answer other than discussions. It is literally a 50/50 tie between A and B. The correct answer is Entra ID, which is neither a nor b since the term is a new term. Microsoft should stop shifting terms. It's already overwhelming as it is.

    upvoted 5 times

⊟ 👤 **dlwPieter** 4 months, 4 weeks ago

`Selected Answer: B`

Informing is not enough. Making it available requires setting up the OneDrive sync client and ensuring it is properly configured to automatically sign in and sync files using the users' Azure AD credentials.

  upvoted 1 times

⊟ 👤 **ConditionalCondition** 5 months ago

`Selected Answer: B`

Logging in with Azure AD credentials helps authenticate the user with their corporate account, but it does not automatically ensure that OneDrive for Business is properly synced or accessible. It is necessary for OneDrive for Business to be set up and configured on the devices to ensure that files are available locally or accessible over the internet.

Therefore, the solution does not meet the goal, as it focuses only on the login process and not on the configuration of OneDrive.

The answer is therefore B. No.

  upvoted 3 times

⊟ 👤 **bigdaddyzaddy** 6 months, 2 weeks ago

`Selected Answer: B`

Informing users to use their Microsoft Azure AD credentials to sign in to their devices is necessary for identity management and access control but does not directly ensure that data stored in OneDrive for Business is available to users from remote locations.

To ensure OneDrive for Business data is available remotely, the following actions are needed:

Configure OneDrive Sync Client: Install and configure the OneDrive sync client on the devices to sync files between the local device and the cloud.
Enable Known Folder Move (KFM): Redirect common folders (such as Desktop, Documents, and Pictures) to OneDrive, making them accessible from any device.
Ensure Proper Licensing: Confirm that users have appropriate Microsoft 365 licenses that include OneDrive for Business.
Secure Remote Access: Ensure users can access their OneDrive data securely, possibly using Conditional Access policies to manage access from remote locations.
While using Azure AD credentials is a foundational step for managing access, it does not address the specific goal of making OneDrive data accessible from remote locations.

upvoted 2 times

☐ 👤 **mamash** 11 months ago

Selected Answer: B

Configure OneDrive for Business:

Ensure that users have the OneDrive for Business client installed on their Windows 10 devices.
Users need to sign in to the OneDrive client with their Microsoft 365 credentials to sync their files.
Enable Known Folder Move (KFM):

Configure OneDrive to automatically sync desktop, documents, and pictures folders. This feature is called Known Folder Move (KFM) and ensures that these important folders are backed up to OneDrive and accessible from any device.
Use Group Policy or Intune for Configuration:

Use Group Policy or Microsoft Intune to automatically configure OneDrive settings on all managed devices. This ensures that users' OneDrive clients are set up correctly without requiring manual intervention.
Inform Users:

Educate users on how to access their OneDrive for Business files from remote locations using the OneDrive client or via the web at onedrive.com.

Sim, a solução atende ao objetivo. No entanto, é importante lembrar que o uso das credenciais do Microsoft Azure AD para entrar em dispositivos não é suficiente para garantir que os dados armazenados no OneDrive for Business estejam disponíveis para usuários de locais remotos. Para garantir que os usuários possam acessar seus dados do OneDrive for Business remotamente, você precisará configurar o acesso remoto ao OneDrive for Business. A Microsoft oferece várias opções para configurar o acesso remoto ao OneDrive for Business, incluindo o uso de VPNs e o acesso direto à Internet [1].

    👤 **OyYaGotta** 1 year, 1 month ago

    This is correct. However there is a NEW feature called Privileged Identity Management (PIM). This may be in the new exam release.

    upvoted 2 times

👤 **bigdaddyzaddy** `Most Recent ⊘` 6 months, 1 week ago

`Selected Answer: C`

Guys some of the questions need to be updated as Microsoft has not only changed names but added new features. The answer is C. But the name is now Microsoft Entra Privileged Identity Manager (PIM)

(PIM) is the feature that can protect high-privilege accounts like Global Administrators by utilizing dynamic risk profiles. It is part of the Entra ID security suite and helps manage, control, and monitor access to privileged roles within your environment.

Key Features of PIM:

Just-in-Time (JIT) Access: Allows Global Administrators to request elevated privileges when needed, with approval workflows in place.

Dynamic Risk Profiles: PIM can evaluate risk factors dynamically based on user activity and conditions (e.g., geographic location or unusual sign-ins).

If suspicious activity is detected, PIM can enforce additional security measures, such as multi-factor authentication (MFA) or just-in-time activation for global administrators.

upvoted 3 times

👤 **Du_MS900** 1 year, 8 months ago

Para garantir que as funções administrativas estejam protegidas exigindo aprovações, você deve usar a "Proteção de Identidade do Microsoft Azure AD" (opção B). Essa é uma solução que ajuda a proteger as identidades e contas dos administradores, tornando o acesso mais seguro e garantindo a integridade das credenciais administrativas.

A Proteção de Identidade do Microsoft Azure AD oferece recursos para proteger contra ameaças de segurança, como autenticação multifator, políticas de senha e verificações de identidade, que podem ser configuradas para exigir aprovações ou aprovações adicionais para atividades administrativas críticas.

👤 **juankhrojas** `Most Recent ⊘` 6 days, 14 hours ago

`Selected Answer: D`

This is literally an option you can see when creating a conditional access policy

upvoted 1 times

👤 **SkyCrownguard** 3 months, 1 week ago

`Selected Answer: C`

C. Microsoft Azure AD Privileged Identity Protection.

Explanation:

Microsoft Azure AD Privileged Identity Protection (PIM) is designed specifically to protect privileged accounts such as Global Administrators. It does this by:

Using dynamic risk profiles to assess and mitigate risks automatically.

Detecting and responding to suspicious activities, such as unusual sign-ins or risky user behavior.

Requiring additional authentication (such as MFA) when risks are detected.

Providing just-in-time access and approval workflows for privileged roles.

upvoted 2 times

   👤 **Thispersonsaid** 2 months, 2 weeks ago

   They really really need to update this. It is making me feel insecure that i am ready for this exam.

   upvoted 1 times

👤 **lunchmode** 3 months, 2 weeks ago

`Selected Answer: C`

Answer is C

To protect members of the Global Administrators group and ensure their accounts are secured using dynamic risk profiles, Microsoft Azure AD

Privileged Identity Management (PIM) is the appropriate feature. PIM helps manage, control, and monitor access to privileged roles, including Global Administrators, by enforcing Just-In-Time (JIT) access, requiring approvals, and enabling multi-factor authentication (MFA). It also provides risk-based conditional access to ensure that privileged accounts are protected based on dynamic risk profiles.
https://learn.microsoft.com/en-us/azure/active-directory/privileged-identity-management/pim-configure

Why not D?
D. Microsoft Azure AD Conditional Access: While Conditional Access can enforce policies like MFA or block access based on risk signals, it does not specifically manage privileged roles or provide the same level of dynamic risk-based protection as PIM.

upvoted 2 times

⊟ 👤 **KuyaBrader** 3 months, 2 weeks ago

Selected Answer: D

The correct answer is D. Microsoft Azure AD Conditional Access.

Microsoft Azure AD Conditional Access uses dynamic risk profiles to protect members of the Global Administrators group by evaluating sign-in risks and user risks, and applying policies based on these risk levels

upvoted 1 times

⊟ 👤 **ConditionalCondition** 5 months ago

Selected Answer: C

The other options, although security-related, are not directly focused on protecting privileged identities through dynamic risk profiles:

A. Mobile application protection policy: This protects mobile applications but is not designed to protect privileged identities specifically.
B. Device configuration policy: This manages device settings, but it does not specifically focus on privileged users.
D. Microsoft Azure AD Conditional Access: Conditional Access controls access to applications based on various conditions but is not focused on protecting privileged identities using dynamic risk profiles.
Therefore, C. Microsoft Azure AD Privilege Identity Protection is the best solution for protecting members of the Global Administrators group by leveraging dynamic risk profiles.

upvoted 1 times

⊟ 👤 **binaryagent** 5 months, 1 week ago

Selected Answer: C

About Azure AD Identity Protection
Azure AD Identity Protection is a security service that helps organizations detect, investigate, and remediate identity-based risks. It uses dynamic risk profiles to assess and respond to potential threats in real time.

upvoted 2 times

⊟ 👤 **vickman11** 5 months, 3 weeks ago

Selected Answer: C

Prevents removal of the last active Global Administrator and Privileged Role Administrator role assignments

https://learn.microsoft.com/en-us/entra/id-governance/privileged-identity-management/pim-configure

upvoted 1 times

⊟ 👤 **Geerie13** 9 months, 3 weeks ago

To protect members of the Global Administrators group by using dynamic risk profiles, you should use:

C. Microsoft Azure AD Privileged Identity Management (PIM).

Azure AD Privileged Identity Management (PIM) allows you to manage, control, and monitor access within your organization, especially for roles with elevated privileges like Global Administrators. PIM includes features such as just-in-time access, which can help protect admin roles by ensuring they are only active when necessary and can incorporate risk-based policies to enhance security.

Note: Azure AD Conditional Access is also relevant for applying policies based on risk profiles, but for dynamic risk profiles specifically related to privileged roles like Global Administrators, PIM is the more focused solution.

Para garantir que os membros do grupo Administradores Globais estejam protegidos usando perfis de risco dinâmicos, você deve usar o recurso "Proteção de Identidade de Privilégio do Microsoft Azure AD" (opção C). A Proteção de Identidade de Privilégio (PIM) do Azure AD ajuda a proteger as identidades privilegiadas, como os Administradores Globais, por meio da utilização de medidas de segurança adicionais, incluindo o uso de perfis de risco dinâmicos para conceder privilégios temporários aos administradores somente quando necessário.

Através da PIM, você pode configurar políticas que exigem a aprovação para atividades administrativas críticas e adicionar uma camada adicional de segurança ao acesso privilegiado, protegendo os Administradores Globais de maneira eficaz.

 upvoted 11 times

⊟ 👤 **Du_MS900** `Most Recent ⊙` 8 months, 1 week ago

Sim, configurar os Serviços de Federação do Active Directory (AD FS) é uma solução adequada para permitir o uso de um cartão inteligente para autenticação em uma implantação híbrida do Microsoft 365. O AD FS é uma solução de federação que permite a autenticação única (SSO) e a autenticação federada, incluindo a capacidade de usar cartões inteligentes como método de autenticação.

Com o AD FS configurado corretamente, os usuários podem usar seus cartões inteligentes para autenticar e obter acesso ao Microsoft 365, o que ajuda a fortalecer a segurança da autenticação. Portanto, a resposta correta é:

R. Sim.

You need to consider the underlined segment to establish whether it is accurate.

To retrieve data for employees who request personal data under General Data Protection Regulation (GDPR) guidelines, you have to create a GDPR assessment .

Select `No adjustment required` if the underlined segment is accurate. If the underlined segment is inaccurate, select the accurate option.

What should you do?

    A. No adjustment required

    B. mobile application protection policy

    C. device configuration policy

    D. data subject request case

Suggested Answer: *D*

`Selected Answer: D`
Copied form Microsoft Learn:
What is a Data Subject Request?
Regulations provide people with rights to help manage the personal data that organizations or employers collect from them. These regulations often refer to people as data subjects or consumers, and the organizations or employers with that data as data controllers, or controllers. The GDPR provides these rights to data subject within the territorial reach of the GDPR. In the United States, the CCPA provides these rights to California consumers.

Again, this is not part of the current MS900 learning path. It again assumes you would know this if you're an IT expert. If it's not in the learning path, i would not be able to answer this since i am in the marketing department.
upvoted 1 times

 👤 **Du_MS900** 8 months, 1 week ago
A opção correta é:

D. Caso de solicitação do titular dos dados

A criação de um "caso de solicitação do titular dos dados" é uma prática comum para lidar com solicitações de acesso a dados pessoais de acordo com as diretrizes do Regulamento Geral de Proteção de Dados (GDPR). Este processo envolve a avaliação e resposta a solicitações de indivíduos que desejam acessar, retificar ou excluir seus próprios dados pessoais. Portanto, a opção D é a mais precisa para esse cenário. As opções B e C não estão diretamente relacionadas à gestão de solicitações de dados pessoais no contexto do GDPR.

The answer is D.
upvoted 1 times

 👤 **kilo365** 1 year, 5 months ago
D. data subject request case
The accurate option is "data subject request case" as per the General Data Protection Regulation (GDPR) guidelines, when an employee requests for their personal data, a data subject request case should be created to retrieve the data. A GDPR assessment is not a requirement to retrieve data for employees who request personal data under GDPR guidelines.
upvoted 3 times

☐ 👤 **covid_9** 1 year, 9 months ago

Answer is D

upvoted 1 times

☐ 👤 **werbinich** 2 years, 10 months ago

A GDPR Assessment is a check against your business processes to see if you hold your personal data according to the requirements set out by the GDPR. It is not a certification, nor proof that you comply with GDPR.

Thus is not the correct answer

upvoted 2 times

☐ 👤 **werbinich** 2 years, 10 months ago

Answer is correct

Personal data and data subject: Any information relating to an identified or identifiable natural person (<<<data subject>>>); an identifiable natural person is one who can be identified, directly or indirectly, in particular by reference to an identifier such as a name, an identification number, location data, an online identifier or to one or more factors specific to the physical, physiological, genetic, mental, economic, cultural, or social identity of that natural person.

upvoted 1 times

☐ 👤 **harp1610** 2 years, 11 months ago

not much explanation is given properly for these question :(simply one link for the topic in general no reason as to why the option are relevant or not

upvoted 1 times

☐ 👤 **syu31svc** 2 years, 12 months ago

D is correct as per link provided

upvoted 3 times

You need to consider the underlined segment to establish whether it is accurate.

You are a Microsoft 365 administrator for a company whose employees are allowed to access corporate information located in the cloud via their personal devices.

You have been tasked with making sure that employees are prohibited from copying this information to their personal OneDrive folders.

You should make use of Intune App Protection .

Select `No adjustment required` if the underlined segment is accurate. If the underlined segment is inaccurate, select the accurate option.
    A. No adjustment required

    B. Information Rights Management

    C. Microsoft Azure AD Privilege Identity Protection

    D. Microsoft Azure AD Identity Protection

Suggested Answer: *A*

References:

https://docs.microsoft.com/en-us/intune/app-protection-policy

Community vote distribution

A (73%)   B (27%)

☐ 👤 **Clouddog** `Highly Voted 👍` 3 years, 5 months ago

Correct, with Intune app protection you can create and assign app protection polies. A policy rule can be a rule that is being enforced when a user tries to access or move company data, or a set of actions that are prohibited or monitored when the user is in het app. A managed app is an app that has app protection policies applied and can be managed by Intune.

upvoted 14 times

☐ 👤 **lunchmode** `Most Recent ⊘` 3 months, 2 weeks ago

`Selected Answer: A`

A. No adjustment required

Explanation:

The underlined segment states that you should use Intune App Protection to prevent employees from copying corporate information to their personal OneDrive folders. This is accurate.

https://learn.microsoft.com/en-us/mem/intune/apps/app-protection-policy

upvoted 1 times

☐ 👤 **dlwPieter** 4 months, 4 weeks ago

`Selected Answer: A`

Intune App Protection policies allow you to control how data is accessed and shared by apps on mobile devices, including preventing data from being copied to unmanaged or personal storage locations. Information Rights Management (IRM) is primarily used to protect sensitive information by applying encryption and access controls to documents and emails. While IRM can help prevent unauthorized access and sharing of protected content, it does not specifically provide the capability to prevent users from copying data to personal OneDrive folders

upvoted 1 times

☐ 👤 **ConditionalCondition** 5 months ago

`Selected Answer: B`

A. No adjustment required: This answer is incorrect because Intune App Protection is not specifically designed to prevent data from being copied to personal OneDrive accounts.

C. Microsoft Azure AD Privilege Identity Protection: This solution relates to the management of privileged identities and has nothing to do with protecting data in personal OneDrive folders.

D. Microsoft Azure AD Identity Protection: This solution focuses on detecting and managing security risks related to identities but is not directly aimed at protecting corporate data in personal cloud services like OneDrive.

Therefore, B. Information Rights Management is the correct answer.

upvoted 1 times

☐ 👤 **MrBirth** 7 months ago

Here's the answer:

https://learn.microsoft.com/en-us/mem/intune/apps/app-protection-policy

upvoted 1 times

mamash 11 months ago

The underlined segment is accurate. Intune App Protection Policies (APP) can be used to restrict data movement between applications, including preventing the copying of corporate information to personal OneDrive folders. This ensures that corporate data remains secure and is not transferred to unauthorized locations.

Therefore, the correct answer is:

A. No adjustment required

upvoted 1 times

Du_MS900 1 year, 8 months ago

Para garantir que os funcionários sejam proibidos de copiar informações corporativas para suas pastas pessoais do OneDrive, a opção mais apropriada é a "Gestão de Direitos de Informação" (IRM - Information Rights Management). O IRM permite aplicar políticas que controlam como as informações são usadas e protegidas, incluindo a prevenção de cópia não autorizada de conteúdo corporativo.

upvoted 1 times

stanisil 1 year, 9 months ago

I think the correct answer is: A

Information Rights Management (IRM) is when you want to protect sensitive Orgs data (for example encrypt some files or emails) so that if they are outside your Org they are still protected.

When we talk about personal devices and data protection more relevant answer is "Intune app protection".

upvoted 3 times

Tyffty 1 year, 9 months ago

The part for me which doesn't add up is the question didn't state that they have Intune enrolled devices. We're assuming Intune is managing devices, but the question didn't state that as a fact or not. I don't like to assume

upvoted 1 times

UzziTheOne 1 year, 11 months ago

The answer is B.

upvoted 2 times

patrickdiorio 2 years ago

Intune is the answer

upvoted 3 times

Atos 2 years ago

Confusing question. Probably is Intune due to accessing cloud. Just i think as SP online as being in cloud and so would use "Information Rights Management", but i would hope it would state SP in question, so intune.

upvoted 1 times

MischiShein 2 years ago

respuesta A

https://docs.microsoft.com/en-us/intune/app-protection-policy

upvoted 2 times

neozed 2 years, 3 months ago

Intune App Protection can be used to prevent employees from copying corporate information to their personal OneDrive folders. This is achieved through the use of policies that restrict the sharing and saving of data, preventing sensitive corporate data from being stored on personal devices or cloud services. Therefore, no adjustment is required.

upvoted 2 times

neozed 2 years, 3 months ago

DRAG DROP -

Your company has a Microsoft Office 365 ProPlus subscription.

You are required to make use of Microsoft Azure Information Protection for document classification and protection.

Which of the following options should you use to achieve your goal? Answer by dragging the correct options from the list to the answer area.

Select and Place:

Options

Answer

Add an Azure subscription to your Microsoft 365 tenant

Enable the default Microsoft Azure AD Privilege Identity Protection policy

Install the Azure Information Protection client

Create a custom Azure Information Protection policy with the Confidential label

Enable the default Azure Information Protection policy

Suggested Answer:

Options

Answer

Enable the default Microsoft Azure AD Privilege Identity Protection policy

Install the Azure Information Protection client

Create a custom Azure Information Protection policy with the Confidential label

Add an Azure subscription to your Microsoft 365 tenant

Enable the default Azure Information Protection policy

References:

dhruvakudva `Highly Voted 👍` 1 year, 11 months ago

Correct answer is:

1. Add an Azure subscription

2. Enable the default AIP policy.

Confirmed as of 6th Jan 2023 from a practice test (Microsoft ESI)

upvoted 23 times

ExamNiq 1 year, 10 months ago

Guess the subscription is needed because 'Your company has a Microsoft Office 365 ProPlus subscription.' so only a subscription for the Microsoft 365 Enterprise Apps. Therefore expansion of the subscription.

upvoted 2 times

wando5000 `Highly Voted 👍` 3 years ago

Incorrect answer given in my opinion. Should be;

Add an Azure subscription to your MS365 tenant
Install the Azure Information Protection client

"To deploy Azure Information Protection, you must have the AIP client installed on any machines where you want to use AIP features."

https://docs.microsoft.com/en-us/azure/information-protection/requirements

upvoted 16 times

Tyffty 1 year, 5 months ago

No client is required. That kind of defeats the purpose of having a cloud based information protection service. So what, the information protection policy doesn't apply if the client isn't installed? Which means if that user uses their M365 credential on any unmanaged device the the policy would be void. Doesn't make sense

upvoted 3 times

NoursBear `Most Recent ⊘` 9 months, 4 weeks ago

According to this a client was required https://learn.microsoft.com/en-us/azure/information-protection/requirements - but I believe this is no longer relevant

upvoted 1 times

SR1991 1 year, 1 month ago

Correct answer are:

1. Add an Azure subscription (https://learn.microsoft.com/en-us/azure/information-protection/deployment-roadmap-classify-label-protect)

2. Enable the default AIP policy (https://learn.microsoft.com/en-us/purview/mip-easy-trials)

upvoted 2 times

Du_MS900 1 year, 2 months ago

"Adicione uma assinatura do Azure ao seu locatário do Microsoft 365."

Add an Azure Sub, Enable default (2nd option) and Enable the default (last option).

upvoted 1 times

RahulX 1 year, 5 months ago

Correct answer is:

1. Add an Azure subscription

2. Enable the default AIP policy.

upvoted 3 times

Atos 1 year, 6 months ago

Given answer looks correct. (FYI: Azure Information Protection client was deprecated)

1. Add Subscription

2.Add Default azure information protection policy

upvoted 2 times

ExamNiq 1 year, 10 months ago

Not your fundamental question but i think this is a clue: Your company has a 'Microsoft Office 365 ProPlus subscription'. so therefor only the apps so to say. If you do want more than you need an extra subscription. But an 'Azure' subscription? .. I would say an MS365 or so subscription. But you need an extra subscription I think.

upvoted 1 times

Flash_Bios 1 year, 10 months ago

These questions are probably out of date. The Azure Information Protection add-in for Office is in maintenance mode and MS recommend you use labels that are built into Office 365 apps and services. https://techcommunity.microsoft.com/t5/security-compliance-and-identity/azure-information-protection-and-the-information-protection/ba-p/3671070

upvoted 2 times

---

jim85 1 year, 11 months ago

Why not all 3 options, as both the client, and the policy are required, above the subscription?

https://learn.microsoft.com/en-us/azure/information-protection/requirements

upvoted 1 times

---

ahsal 2 years ago

Accourding to microsoft "To deploy Azure Information Protection, you must have the AIP client installed on any machines where you want to use AIP features. For more information"

In this case the right answer would be:

1. Add an Azure subscription to your MS365 tenant

2. Install the Azure Information Protection client

https://learn.microsoft.com/en-us/azure/information-protection/requirements

upvoted 2 times

---

khalid2ti 2 years ago

I think

Add Azure subscription to 365 tenant

Install AIP client

are correct.

https://learn.microsoft.com/en-us/azure/information-protection/deployment-roadmap-classify-label-protect#confirm-your-subscription-and-assign-user-licenses

upvoted 1 times

Azurefox79 2 years, 1 month ago

The correct answer is Install client + create a custom policy. Azure sub is not required

upvoted 1 times

---

moss5 2 years, 3 months ago

I don't think "Add an Azure subscription" is correct. The licensing is covered by M365. A subscription is only needed if paying for other Azure services

upvoted 5 times

> **NoursBear** 9 months, 4 weeks ago
>
> They don't have M365, they need to get a license first
>
> upvoted 1 times

Your company has a Microsoft Office 365 subscription.

You have been tasked with removing customer information in compliance with General Data Protection Regulation (GDPR), after the customer generated data subject request (DSR). You want to make sure that legal holds are placed on relevant information if the opportunity arises.

You want to start searching for the client's information by using Content Search eDiscovery.

Which of the following applications can be searched with this method? (Choose two.)

     A. Microsoft PowerApps

     B. Microsoft Outlook

     C. Microsoft Access

     D. Microsoft SharePoint Online

So b,e?;)

upvoted 1 times

☐ 👤 **lunchmode** 3 months, 2 weeks ago

`Selected Answer: BE`

The correct answers are:

B. Publish labels
E. Apply retention policies

Explanation:

To configure a data governance strategy that allows for data classification and enforcement, the following components are essential:

B. Publish labels:

Labels in Microsoft 365 (part of Microsoft Information Protection) are used to classify data based on its sensitivity or importance. Publishing labels

makes them available to users and services across the organization, enabling consistent classification of data.

E. Apply retention policies:
Retention policies ensure that data is retained or deleted according to organizational or regulatory requirements. They enforce the governance of data based on its classification and lifecycle.

https://learn.microsoft.com/en-us/microsoft-365/compliance/sensitivity-labels
https://learn.microsoft.com/en-us/microsoft-365/compliance/retention-policies

upvoted 1 times

👤 **tony022** 4 months, 1 week ago

Selected Answer: BE

B. Publish labels: Sensitivity labels (part of Microsoft Purview) are used to classify data (e.g., "Confidential" or "Public"). Publishing labels makes them available to users/apps for classification.

E. Apply retention policies: Retention policies enforce rules based on classifications (e.g., retain data for 7 years, auto-delete after expiration). They ensure compliance with governance requirements tied to labels.
supervision policies monitor communications

upvoted 1 times

👤 **Sergio_G_S** 5 months, 3 weeks ago

Selected Answer: BD

The question has two requirements, "allows for data classification," and, "allow for these classifications to be enforced."
There is no requirement for data retention. "Publish Labels" allows for data classification, and "Apply Supervision Policies" allows for the enforcement of corporate policies, risk management, and regulator compliance

upvoted 1 times

👤 **Sergio_G_S** 6 months, 1 week ago

Selected Answer: BD

B-to classify data
D-to ensure that classifications are applied correctly and maintained

upvoted 1 times

👤 **bigdaddyzaddy** 6 months, 1 week ago

Selected Answer: BE

Supervision policies deals with monitoring and reviewing COMMUNICATIONS within an organization to ensure compliance with legal, regulatory, or internal standards. They are applied to specific communication types (e.g., email, Teams chat, etc.) to flag content for review. They're mostly used for monitoring content for inappropriate behavior, such as harassment, or to ensure employees follow certain communication rules.

It has nothing to do with the enforcement of data classification!

Enforcing data classification in 365 involves using a combination of labels, retention policies, and other compliance features to ensure that data is properly classified, protected, and managed according to the organization's governance needs. Publishing labels and applying retention policies are key components that allow classification to be applied and then managed according to regulatory requirements.

B and E is the answer

upvoted 3 times

👤 **Sergio_G_S** 5 months, 3 weeks ago

That would be correct if it didn't say It should also allow for these classifications to be enforced. B,D is correct

upvoted 2 times

👤 **Marski** 3 years, 6 months ago

This is important but somewhat hidden in MS docs. The same can be said about Intune and Windows Autopilot. M365 docs need to be kept in shape. And older version respected. Not all public organization for example in health care switch to cloud because of patient record confidentiality. They keep most On-Premise. I dont think On-Premise is never gonna die. Thats why we need hybrid models. Vastaamo-tragedy in Finland just shows this.

You need to consider the underlined segment to establish whether it is accurate.

You have been tasked with acquiring Microsoft 365 Enterprise licenses for your organization.

You should <u>contact a Cloud Solution Provider (CSP) or subscribe to a Microsoft Enterprise Agreement (EA)</u>.

Select `No adjustment required` if the underlined segment is accurate. If the underlined segment is inaccurate, select the accurate option.

Which two options can you use? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

    A. No adjustment required

    B. contact a Cloud Solution Provider (CSP) or use a company credit card via the Microsoft website

    C. subscribe to a Microsoft Enterprise Agreement (EA) or visit a Microsoft retail store

    D. use a company credit card via the Microsoft website or visit a Microsoft retail store subscription from

Suggested Answer: *A*

References:

https://docs.microsoft.com/en-us/microsoft-365/business/get-microsoft-365-business https://www.microsoft.com/en-us/licensing/licensing-programs/enterprise?activetab=enterprise-tab%3aprimaryr2

Community vote distribution

A (58%)   B (42%)

Clouddog `Highly Voted` 2 years, 5 months ago

Answer A is correct. If you want to get Microsoft Enterprise Agreement (EA) you have to contact a specialist. So you can not do this with a credit card.

upvoted 16 times

lunchmode `Most Recent` 3 months, 2 weeks ago

`Selected Answer: A`

Tricky but I'll go with A

Explanation:

The underlined segment states that you can acquire Microsoft 365 Enterprise licenses by contacting a Cloud Solution Provider (CSP) or subscribing to a Microsoft Enterprise Agreement (EA). This is accurate, as both options are valid ways to purchase Microsoft 365 Enterprise licenses.

Additionally, another valid option is to use a company credit card via the Microsoft website, which is a direct purchasing method for smaller organizations or those without an Enterprise Agreement.

"LTSC = Long Term Servicing Channel" is the keywords here.

upvoted 44 times

mamash `Most Recent ⊘` 10 months, 4 weeks ago

`Selected Answer: D`

Read The question

Your solution has to allow for the scheduling of upgrades and updates to be executed consistently for al devices, while also keeping costs to a minimum.

D. Windows 10 Enterprise LTSC (Long-Term Servicing Channel)

Reasons:

Long-Term Support: Windows 10 Enterprise LTSC is designed for devices that do not need to receive feature updates regularly. It provides extended support, with updates only for security and critical issues, making it suitable for devices that should only be upgraded after a long period.

Consistency: LTSC editions do not receive bi-annual feature updates like other Windows editions, ensuring that the software environment remains stable and consistent over time.

Cost Efficiency: Although initial costs might be higher compared to other editions, the reduced need for frequent upgrades and maintenance over a five-year period can lead to overall cost savings.

upvoted 4 times

NoursBear 1 year, 3 months ago

I don't understand, this is talking about not upgrading the devices before 5 years is up but during this time they have to be UPDATED continuously. For a LTSC license you need Pro as basic, so Pro should be the answer so either the question has not been understood, read correctly or the question is wrong

Community vote distribution

B (80%) | 13% | 7%

Lacattack `Highly Voted 👍` 3 years, 11 months ago

Windows Server Update Services (WSUS) provides extensive control over Windows 10 updates and is natively available in the Windows Server operating system. In addition to the ability to defer updates, organizations can add an approval layer for updates and choose to deploy them to specific computers or groups of computers whenever ready.

The other options do not provide Windows as a service.

upvoted 34 times

---

mamash `Most Recent ⊘` 10 months, 4 weeks ago

`Selected Answer: B`

B. Windows Server Update Services (WSUS)

Reasons:

Centralized Management: WSUS allows you to manage the distribution of updates released through Microsoft Update to computers in your network. This centralized management is ideal for ensuring all devices receive updates consistently.

Scheduling and Control: WSUS gives you control over which updates are deployed and when, ensuring that you can manage and schedule updates according to the company's needs.

Cost Efficiency: WSUS is included with Windows Server, making it a cost-effective solution for managing updates without requiring additional licensing or subscription costs.

The other options, while useful for different purposes, do not fit the specific requirement as closely:

Windows Autopilot: Primarily focused on the deployment and configuration of new devices rather than ongoing update management.
Microsoft Intune: A cloud-based management tool suitable for mobile device management (MDM) and mobile application management (MAM), which may include additional costs.
Azure AD Connect: Used for synchronizing on-premises directories with Azure AD, not for managing updates.

upvoted 2 times

Tyffty 1 year, 8 months ago

`Selected Answer: B`

Intune doesn't support Windows 7

https://learn.microsoft.com/en-us/mem/intune/fundamentals/supported-devices-browsers

upvoted 1 times

NoursBear 1 year, 3 months ago

but the machines are upgraded to W10, cheaper is Intune - no info about configuration on prem/cloud so let's assume they don't have hardware for WSUS

upvoted 1 times

stanisil 1 year, 8 months ago

Selected Answer: B

I think that the answer is B. WSUS.

Intune doesn't support Windows 7. Also when you use point-of-sale devices, these devices don't need cloud services like office365 and others.... These devices only need to be updated with important quality updates. WSUS supports Win7 and dose not require an additional license (except for Windows Server). That means it is a solution with low cost.

upvoted 3 times

Storm 1 year, 10 months ago

In microsoft terms WSUS is expensive as you have to manage a local installed server incl. Hardware, Backup, Electricity, employees etc.

If the company allready have a M365 E5 license or some other MDM enabled license, the cost of intune is minimal.

We do not know, do they have an on-prem server ? Do they have a MDM License ?

It's a M365 Cert. I would go for Intune.

upvoted 2 times

Tyffty 1 year, 8 months ago

Wrong. Intune doesn't support Windows 7.

https://learn.microsoft.com/en-us/mem/intune/fundamentals/supported-devices-browsers

upvoted 1 times

neozed 2 years, 3 months ago

Selected Answer: B

B. Windows Server Update Services (WSUS) is the servicing tool that should be used for scheduling upgrades and updates to be executed consistently for all devices. WSUS allows administrators to manage and distribute updates and upgrades to Windows-based computers on a corporate network. It can be used to deploy software updates, security patches, and service packs to Windows operating systems and Microsoft applications. WSUS can also be used to manage the deployment of feature updates, such as upgrading from Windows 7 to Windows 10. Using WSUS, the company can schedule the upgrade to Windows 10 for all the point-of-sale terminals and ensure that they receive updates and upgrades consistently for at least five years. This solution will keep costs to a minimum by automating the upgrade process and reducing the need for manual intervention.

upvoted 3 times

kilo365 2 years, 5 months ago

Selected Answer: C

The servicing tool that should be used for scheduling consistent upgrades and updates while keeping costs to a minimum for the POS terminals upgrade is Microsoft Intune, a cloud-based device management tool that allows for remote management, conditional access, device compliance policies, inventory and more.

upvoted 2 times

Irism 2 years, 4 months ago

true but this does not minimize costs, therefor wsus is the answer

upvoted 5 times

dekinha 2 years, 5 months ago

Selected Answer: B

is WSUS

upvoted 3 times

uclacyc 2 years, 7 months ago

Selected Answer: B

WSUS is an on-premises deployment of Windows Update, akin to having a private cloud for Windows Updates. This is the answer.

upvoted 1 times

akm2004_in 2 years, 8 months ago

Selected Answer: A

Shouldn't the answer be autopilot?

upvoted 1 times

Antimus 2 years, 8 months ago

No, the requirement is to service the devices, not build and configure. It would be Intune but they want to minimise costs, so it's WSUS

☐ 👤 **ExamNiq** 2 years, 4 months ago

Autopilot is only for the onboarding stages, not for servicing Windows

You need to consider the underlined segment to establish whether it is accurate.

Your company has a Microsoft Office 365 subscription.

As an administrator for this subscription, you want to check what the repercussions are if the availability terms of the Microsoft Office 365 services are not satisfied.

You analyze the Service Level agreement .

Select `No adjustment required` if the underlined segment is accurate. If the underlined segment is inaccurate, select the accurate option.

    A. No adjustment required.

    B. analyze the Microsoft Cloud agreement

    C. access Data Governance

    D. analyze the Microsoft Enterprise agreement

Suggested Answer: *A*

a subscription-based licensing model = CLOUD, and Office Professional 2016 is Not cloud. Then answer NO

upvoted 9 times

☐ 👤 **Jamysson** `Most Recent ⊘` 8 months, 1 week ago

B - "Baseado em assinatura" é a palavra-chave aqui.

upvoted 1 times

☐ 👤 **Du_MS900** 1 year, 8 months ago

O Office Professional Plus 2016 não é uma versão baseada em assinatura do Microsoft Office. Em vez disso, é uma versão tradicional do Office, que é vendida com uma licença perpétua e não está incluída em um modelo de licenciamento baseado em assinatura, como o Office 365 (agora conhecido como Microsoft 365). Para aplicar configurações do aplicativo do Office por meio de política de grupo, você precisaria de uma versão baseada em assinatura, como o Microsoft 365 Apps for Business ou Enterprise.

Portanto, a resposta correta é:

B. Não

upvoted 2 times

☐ 👤 **ExamKiller020** 2 years, 9 months ago

`Selected Answer: B`

Only Office 365 ProPlus can be bought with subscription, other version of office, including the 2016 version can be bought only by license, so the answer is B.

upvoted 4 times

☐ 👤 **Clouddog** 3 years, 5 months ago

Office Professional 2016 has a volume licensing and is not subscription based.

In software licensing, a volume licensing is the practice of selling a license authorizing one computer program to be used on a large number of computers or by a large number of users.

upvoted 1 times

☐ 👤 **Ulus** 3 years, 7 months ago

Office professional 2016 is not subscription based I guess...but it does allow for group policy..can someone confirm please?

phatboi `Highly Voted 👍` 3 years, 6 months ago

A. Office 365 ProPlus - For those that chose this, note that this is not a type of licensing model.

B. Microsoft 365 E1 - For those that chose this, note that it doesnt allow you install the desktop client version. The design requirement mentioned the users want desktop products.

C. Office 365 E3 - For those that chose this, the next action will be for the administrator to uncheck the Teams box in other to prevent the audio conferencing

D. Office 365 E5 - For those that chose this, same as C; however it is a license overkill.

Old question.

But Office 365 E3 does have audio conferencing, its Microsoft 365 E3 that does not

https://www.microsoft.com/en-au/microsoft-365/enterprise/office365-plans-and-pricing

upvoted 1 times

DPAJA 1 year, 3 months ago

But Microsoft 365 Apps for enterprise is cheaper.

upvoted 1 times

NoursBear 1 year, 3 months ago

For me it's Office 365 E3, it has Teams but not Audio Conferencing and lets you install Office locally. It could be Microsoft 365 Apps for enterprise but it is not an option

upvoted 1 times

NoursBear 1 year, 3 months ago

wait i didn't know pro plus was the old name for Microsoft 365 Apps for enterprise so A is correct

upvoted 1 times

NoursBear 1 year, 2 months ago

my bad, 365 Apps for Enterprise does not have desktop apps and is the new name for Proplus but 365 Apps for Business does have the desktop apps and is not an option

upvoted 1 times

NoursBear 1 year, 2 months ago

arghhh fake news, these plans are a pain. Apps for Enterprise and Apps for Business have desktop apps and as Office 365 ProPlus is now renamed to one of the other two, that would have been the correct answer some years ago

upvoted 1 times

PadmarajV 1 year, 4 months ago

Answer is option C

upvoted 1 times

Du_MS900 1 year, 8 months ago

Para atribuir licenças do Microsoft 365 a usuários em um departamento onde a audioconferência não é necessária, mas é necessário ter produtos de desktop de escritório, a opção adequada é:

B. **Microsoft 365 E1**

O Microsoft 365 E1 fornece os produtos de desktop do Office, como o Word, Excel e PowerPoint, mas não inclui recursos avançados de audioconferência. Essa opção atende aos requisitos do departamento sem adicionar funcionalidades de audioconferência que não são necessárias.

Portanto, a resposta correta é a opção B.

upvoted 2 times

Tyffty 1 year, 8 months ago

Selected Answer: A

Office 365 ProPlus (which was required for RDP Office) is now M365 Apps for Enterprise.

Office 365 E3 includes Audio Conferencing. It's a free addon

upvoted 1 times

stanisil 1 year, 8 months ago

Selected Answer: A

For me, the correct answer is: A

Office 365 ProPlus is now: "Microsoft 365 Apps for Enterprise"

A. Office 365 ProPlus - desktop apps (not audio-conferencing)

B. Microsoft 365 E1 - only web apps (at the moment this plan is not active)

C. Office 365 E3 - has audio-conferencing

D. Office 365 E5 - has audio-conferencing

upvoted 3 times

GMC 1 year, 9 months ago

Selected Answer: A

E3 and E5 has audio conferencing so that cant be the answer and E1 it does not inculde full installed version of office apps, you can only use Office aaps on the internet. That leaves Office 365ProPlus.

upvoted 3 times

saeed_huhu 1 year, 9 months ago

C. Office 365 E3

upvoted 1 times

Iknietbelg 1 year, 10 months ago

Selected Answer: A

I believe the answer is A for 2 reasons

First of all, "Office 365 Proplus" was the old name for "M365 Apps for Enterprises" (see: https://learn.microsoft.com/en-us/microsoft-365/admin/new-subscription-names?view=o365-worldwide)

Secondly, just like M365 Apps for business, M365 apps for Enterprises ALLOWS desktop apps and does NOT include teams Service except for a "Explorative version" (see: https://www.microsoft.com/en-us/microsoft-365/enterprise/microsoft-365-apps-for-enterprise-product?activetab=pivot:overviewtab)

Answer C & D would be overkill

upvoted 1 times

RahulX 1 year, 11 months ago

Microsoft 365 Apps for enterprise licenses to users in the department. This license includes the desktop versions of Office applications such as Word, Excel, PowerPoint, and Outlook. It does not include audio-conferencing capabilities.

upvoted 2 times

Du_MS900 1 year, 8 months ago

Para atender às necessidades do departamento, onde os usuários precisam colaborar com outros e verificar agendamentos de trabalho semanalmente, mas não precisam dos produtos de desktop do Office, a opção adequada é:

A. **Office 365 F1**

O Office 365 F1 é projetado para funcionários de "Primeira Linha" que não precisam dos aplicativos de desktop do Office, mas desejam colaborar e acessar ferramentas de comunicação, como o Microsoft Teams e o Outlook. Ele fornece funcionalidades de colaboração e comunicação sem incluir os aplicativos de desktop do Office, o que parece ser o que o departamento precisa.

Portanto, a resposta correta é a opção A.

upvoted 3 times

GMC 1 year, 9 months ago

Selected Answer: B

Office 365 F1 is a subscription-based license that is designed for frontline workers. It does not include all of the features of Microsoft 365 E1, such as Teams and Yammer.

Microsoft 365 E1: This is a subscription-based license that includes web-based Office apps and services, but it does not include the full installed versions of Office applications. Therefore, it may not meet the requirement of needing office desktop products to complete tasks.

upvoted 1 times

---

momowagdy 1 year, 9 months ago

There is no plan called Office 365 F1, what exists are Micrsoft 365 F1, F3 etc. Plus Why I don't want to choose Microsoft 365 E1 as well is that Windows version will be included. But I see E1 is the best option here as there is no such plan called Office 365 E1.

upvoted 3 times

RahulX 1 year, 11 months ago

>
> there is no F3 in the answers so the answer is E1
>
> upvoted 1 times

---

neozed 2 years, 3 months ago

Selected Answer: A

The license that would help achieve this is A. Office 365 F1.

Office 365 F1 includes web-based Office applications for collaboration, email hosting, and communication, which would enable users to collaborate with other users effectively. It also includes access to Microsoft Teams, which can be used for scheduling and checking job schedules on a weekly basis.

Microsoft 365 E1 includes web-based Office applications but does not include any collaboration or communication tools beyond email hosting, which may not be sufficient for effective collaboration in the department.

Office 365 E3 includes the desktop products and advanced capabilities such as audio-conferencing, which the department does not require.

Office 365 E5 includes advanced capabilities such as audio-conferencing and analytics, which may not be necessary for the department's needs.

upvoted 5 times

> **Tyffty** 1 year, 11 months ago
>
> That's incorrect. E1 includes Teams. Answer is B. F1 (which is now F3) includes office apps
>
> upvoted 1 times

□ 👤 **neozed** 2 years, 3 months ago

Selected Answer: C

The license that would help achieve this is C. Office 365 E3.

Office 365 ProPlus includes audio-conferencing capabilities in addition to the desktop products, which the department does not require.

Microsoft 365 E1 includes web-based Office applications but not the desktop products, which are required by the department.

Office 365 E5 includes audio-conferencing and other advanced capabilities that the department does not need.

Office 365 E3 includes the desktop products (such as Word, Excel, PowerPoint) without audio-conferencing capabilities, making it the appropriate license for this situation.

upvoted 1 times

 □ 👤 **Natsumiko** 2 years, 3 months ago

Selected Answer: B

Since the question states that users need to collaborate with each other I assume they are going to need at least the webapps for Word, Excel and so on. This is not included in Office 365 F1 since it's a read only functionality of those apps and thus no collaboration is possible.

upvoted 1 times

 □ 👤 **MslK** 2 years, 4 months ago

Microsoft 365 F3

Formerly Microsoft 365 F1 Empower your frontline workforce with productivity apps and cloud services that allow them to do their best work.

upvoted 1 times

 □ 👤 **chan2013** 2 years, 4 months ago

F3 Teams come with Shift Management so answer is A

upvoted 1 times

 □ 👤 **mrondon** 2 years, 4 months ago

Selected Answer: A

Microsoft 365 E1 does not exist, Office 365 E1 exists.

The E3 license has more services than it requires.

That is why F1 is the best option

upvoted 2 times

 □ 👤 **jim85** 2 years, 5 months ago

There is no Microsoft 365 E1 but:

https://www.microsoft.com/en-us/microsoft-365/enterprise/frontline#office-SKUChooser-0dbn8nt

https://www.microsoft.com/en-us/microsoft-365/enterprise/compare-office-365-plans

So I'd say A

The two Microsoft platforms that provide hybrid capabilities for migrating from an on-premises deployment are:

C. Microsoft Exchange
D. Microsoft Teams

Both Exchange and Teams offer hybrid configurations that allow organizations to integrate their on-premises deployments with the cloud, enabling gradual migrations and coexistence between on-premises and cloud environments. Therefore, options C and D are the correct choices.

upvoted 1 times

Du_MS900 1 year, 2 months ago

As duas plataformas da Microsoft que oferecem recursos híbridos para migração são:

A. **Microsoft Skype para Empresas**
C. **Microsoft Exchange**

Portanto, as respostas corretas são A e C.

upvoted 3 times

Atos 1 year, 6 months ago

Answer is correct, from MS site:
"Microsoft SaaS services include Microsoft 365 cloud apps, Microsoft Intune, and Microsoft Dynamics 365. Hybrid cloud scenarios with Microsoft SaaS combine these services with on-premises services or applications. For example, Exchange Online can be integrated

with Skype for Business 2019 that is deployed
on-premises."

yamer é uma rede social nao depende de um servidor local para funcionar
exchange e skype sao aplicativos que dependem do servidor pra rodar em uma empresa
upvoted 2 times

A company is moving to Microsoft Azure. Some applications cannot be moved.

You need to identify which applications will remain in a hybrid environment after the migration.

Which applications will remain in a hybrid environment?

    A. applications that manage sensitive information

    B. applications that use a USB-token device to control access

    C. legacy applications that use a message-based interface

    D. a new server that runs several line-of-business applications

Suggested Answer: *B*

Community vote distribution

C (67%) | B (22%) | 11%
👤 **bentthai** `Highly Voted 👍` 5 years, 9 months ago

Should be C not A. Azure can handle sensitive information and is certified.

upvoted 37 times

👤 **ArnoArno** `Highly Voted 👍` 5 years, 1 month ago

I think B is the only correct answer.

A) sensitive info can be handled => certifications

b) It is not possible to connect a USB device to autenticate to a specific application when moved to Azure -> Wvd

c) Message bus functionality is part of Azure. Azure service bus

d) LOB apps can be transfered

upvoted 30 times

    👤 **RPSMO** 4 years, 8 months ago

    Not entirely true (not currently anyway).... You can configure the WVD to redirect your device's usb ports to your VM.

    upvoted 7 times

    👤 **Fuji_56** 4 years, 11 months ago

    i agree. hyrbrid is still required for this, likely in the form of ADFS federation, so is not "cloud only"

    upvoted 2 times

👤 **tony022** `Most Recent ⊘` 4 months, 1 week ago

`Selected Answer: B`

B&C

Explanation:

B. Applications that use a USB-token device to control access

USB tokens require physical hardware access, which cannot be replicated in Azure's cloud environment. These applications must remain on-premises.

C. Legacy applications that use a message-based interface

Legacy systems often rely on outdated protocols or dependencies that are incompatible with cloud architectures. If they cannot be modernized or integrated with Azure services (e.g., Azure Service Bus), they remain in a hybrid setup.

upvoted 2 times

👤 **MeJaHe** 4 months, 3 weeks ago

`Selected Answer: B`

Applications that rely on physical hardware, such as USB-token devices, are often difficult to migrate to the cloud because they require direct physical access to the hardware. This makes them strong candidates for remaining in a hybrid environment.

upvoted 1 times

👤 **bigdaddyzaddy** 6 months, 1 week ago

`Selected Answer: A`

Applications managing sensitive information are prime candidates to remain in a hybrid environment due to compliance and security requirements, making A the most appropriate choice.

Legacy applications might be suitable for hybrid environments, but the specific requirement for a message-based interface does not guarantee the need for hybrid infrastructure. This depends on the integration architecture and modernization strategy. So I highly doubt that it is C.

upvoted 1 times

what is difference between question 2 and this?

upvoted 3 times

☐ 👤 **Slyphel** 1 year, 6 months ago

I was thinking the same thing. As my opinion has not changed about it. Same thing goes for both questions whilenthe answers are different.

upvoted 1 times

☐ 👤 **Du_MS900** 1 year, 8 months ago

B. Aplicativos que usam um dispositivo token USB para controlar o acesso

Esses aplicativos podem ter requisitos de segurança específicos que os tornam mais adequados para um ambiente híbrido, onde o controle de acesso físico é mantido no local.

upvoted 2 times

☐ 👤 **RahulX** 1 year, 11 months ago

B. applications that use a USB-token device to control access

upvoted 1 times

☐ 👤 **Murtuza** 2 years, 1 month ago

The correct choice is C - 100%

upvoted 2 times

☐ 👤 **[Removed]** 2 years, 1 month ago

Selected Answer: A

i think that question requires two answers, and that would be A and C

upvoted 2 times

☐ 👤 **jim85** 2 years, 5 months ago

I would go with C, as if you want to use an application which runs on Windows 2000 (legacy), then you won't have any option (even not a VM in Azure) to use it in the cloud.

upvoted 1 times

☐ 👤 **Tyffty** 1 year, 8 months ago

That's Wrong. There is nothing stating that Windows 2000 won't run on a VM in Azure. Microsoft states there's no support, but nowhere ever did anyone say that it's not possible. C is incorrect

https://learn.microsoft.com/en-us/azure/migrate/migrate-v1

upvoted 2 times

☐ 👤 **bigkman** 9 months, 2 weeks ago

This whole statement is incorrect, supportability defines usability of the products, it is common knowledge that once a product is outside the scope of support there is no guarantee that it will function correctly or at all. This means that Microsoft will not recommend using an outdated product as a possible resolution to a problem and would not advise running Windows 2000 in a VM. This is not a question of whether it is possible.

upvoted 1 times

☐ 👤 **PastyConnoisseur** 2 years, 5 months ago

This answer contradicts Q12 where the answer was "applications that manage sensitive information" would remain in a hybrid environment after a migration.

upvoted 10 times

WellyJC 2 years, 6 months ago

B is correct.

Everything else can be handled cloud only.

Sensitive info can be handled with certs.

VM for legacy apps.

LOB apps can also be transferred to other environment.

upvoted 2 times

ajiejeng 2 years, 8 months ago

C, Legacy apps can't be moved on the cloud as it is not supported . Best example is SFB

upvoted 1 times

northgaterebel 2 years, 8 months ago

i think B and C.

C. Legacy apps = hybrid.

B. USB-token = smart card = hybrid. Microsoft does not mention the use of USB devices for OATH hardware tokens. https://learn.microsoft.com/en-us/azure/active-directory/authentication/concept-authentication-oath-tokens

upvoted 2 times

WellyJC 2 years, 6 months ago

B is correct.

Everything else can be handled cloud only.

Sensitive info can be handled with certs.

VM for legacy apps.

LOB apps can also be transferred to other environment.

Provide an on-demand sandbox environment.
Cloud Model: Public
(Public cloud allows for easy and cost-effective provisioning of sandbox environments as needed.)

Provide failover capabilities between resources that you manage and resources in other regions.
Cloud Model: Hybrid
(A hybrid model allows integration of on-premises resources with cloud resources, enabling failover capabilities.)

Deploy virtual machines that support USB devices.
Cloud Model: Private
(A private cloud offers greater control and customization, which is necessary for USB device support.)
upvoted 1 times

⊟ 👤 **Hov13** 6 months ago
the question says company does not have a private cloud ....
upvoted 1 times

⊟ 👤 **AceVander** 1 year, 4 months ago
According to MS-900 Quizlet: Answers are: Public, Public, Hybrid
Note:
1. An "on-demand sandbox environment" is a public-cloud based sandbox that you can get and manage using API; this is a scalable option = PUBLIC
2. "Provide failover capabilities between resources that you manage and resources in other regions" - this is a disaster recovery option and since this is a test on Microsoft Cloud models, Microsoft Azure is a Public Cloud, the infrastructure is owned and operated by a third-party service provider (aka Microsoft Azure) = PUBLIC
3. "Deploy Virtual Machines that support USB devices" - Virtual Machines = Public cloud & USB devices = are on-premises physical devices which means this is HYBRID
upvoted 7 times

⊟ 👤 **Du_MS900** 1 year, 8 months ago
Public: 1. Fornecer um ambiente de teste sob demanda.
Public: 2. Fornecer capacidades de failover entre recursos que você gerencia e recursos em outras regiões.
Private: Implantar máquinas virtuais que suportam dispositivos USB.

How is this a fair question? The references don't even mention a "sandbox"
upvoted 1 times

⊟ 👤 **examtime2023** 1 year, 12 months ago
Should be Public, Hybrid, Private.
on the first link provided under FAQ's What are examples of a Hybrid Cloud?
If an application resides on-premises or in a private cloud, sudden spikes in demand may overload the capacity—such as season events like online shopping or tax filing. When demand spikes, organizations can tap into additional computing resources in the public cloud, sometimes called "cloud bursting"—where the hybrid cloud environment allows the on-premises infrastructure to "burst through" to the public cloud.
upvoted 1 times

"All proposed solutions must minimize costs," means that 3) VMs using USB should be hybrid. Private has the highest costs.
upvoted 2 times

⊟ 👤 **ee1974** 2 years, 8 months ago

Public
Hybrid
Hybrid
  upvoted 1 times

👤 **zhengruqing** 2 years, 9 months ago

Should be public, public, hybrid. USB connectivity requires that VM hosts are on-prem. Hence, hybrid.

  upvoted 1 times

    👤 **zhengruqing** 2 years, 9 months ago

    public, hybrid, hybrid* Second is also hybrid since it says they have resources they manage, which is on-prem.

      upvoted 2 times

👤 **apurvasinghal** 2 years, 11 months ago

2nd option must be No. Private Cloud cannot provide unlimited scalability. That's why we have hybrid and public cloud.

  upvoted 2 times

👤 **wando5000** 2 years, 11 months ago

Provide an on demand sandbox - you can do this in either a private or a public cloud so I will answer hybrid

Provide failover capabilities between resources that you manage and resources in other regions - I answer Public because it concerns failover from on region to another which is a fault tolerance option in Azure

Deploy VMs that support usb devices - you can do this in either a private or a public cloud so I will answer hybrid

  upvoted 3 times

👤 **Broniac** 3 years ago

Well i think that should be Public,Public and Hybrid due to for first scenario I didnt find any place with information mentioning that On demand sandbox is a specific feature of private cloud

  upvoted 2 times

👤 **Ste_W** 3 years, 3 months ago

would be correct except that it specifically says resources that YOU MANAGE, not resources in your region so I would say that on this basis, hybrid would be correct for scenario 2. If it was Public surely the question would refer to resources in your region and resources in other regions, rather than resources you manage.

  upvoted 5 times

You are the Microsoft 365 administrator for a company.

The company runs SharePoint Server and Exchange Server in an on-premises datacenter. The site collection for the finance department is currently encrypted using third-party software.

You need to move as many services to Microsoft 365 as possible.

What should you do?

    A. Migrate all SharePoint data and Exchange mailboxes to Microsoft 365.

    B. Leave SharePoint data for finance department users on-premises. Migrate all other SharePoint data and Exchange mailboxes to Microsoft 365.

    C. Leave mailboxes for finance department users on-premises. Migrate all other SharePoint data and Exchange mailboxes to Microsoft 365.

    D. Leave SharePoint data and mailboxes for finance department users on-premises. Migrate all other SharePoint data and Exchange mailboxes to Microsoft 365.

Suggested Answer: *A*

I feel like it is done by purpose. The Microsoft Learn materials and practice exams are just not enough to get ready for these types of questions (maybe it's enough for someone smarter / for one that uses Microsoft products on daily basis, but not for me). I have 4 certifications and this (hopefully) is going to be my 5th one, but this one has the most discussions about the correct answers, other certifications (the fundamental ones) are easier and mostly everyone agrees on 1 answer.

upvoted 4 times

👤 **AntonioTech** `Most Recent ⊘` 2 months, 2 weeks ago

`Selected Answer: B`

Given the scenario where the finance department's site collection is encrypted using third-party software, the best approach would be to leave the encrypted data on-premises while migrating other services to Microsoft 365. This ensures that the encryption and security measures for the finance department remain intact while maximizing the migration of other services.

upvoted 1 times

👤 **Tamar1000BC** 4 months, 3 weeks ago

Given that the finance department's site collection is currently encrypted using third-party software, it may be necessary to leave that data on-premises due to encryption and compliance requirements. Therefore, the best approach would be:

B. Leave SharePoint data for finance department users on-premises. Migrate all other SharePoint data and Exchange mailboxes to Microsoft 365.

upvoted 3 times

☐ 👤 **bigdaddyzaddy** 6 months, 1 week ago

The finance department's SharePoint site collection is encrypted with third-party software, which could make migrating it to Microsoft 365 challenging or non-compliant without addressing encryption compatibility.
To maximize migration to Microsoft 365 while maintaining the current encryption for the finance department, other SharePoint data and Exchange mailboxes can be migrated to the cloud, leaving the encrypted data on-premises.

upvoted 2 times

☐ 👤 **TheBlackHandOfTime** 7 months ago

The third party encryption software needs to remain on prem, and the only data that would matter for finance is SharePoint not Exchange, so B.

upvoted 3 times

☐ 👤 **olga_tena** 8 months, 1 week ago

Both options, B and D, keep the finance department's data on-premises to ensure security and compliance. However, they have slight differences:

B: Focuses on migrating all other SharePoint data and Exchange mailboxes to Microsoft 365 while specifically addressing the finance department's SharePoint data only.

D: Specifies leaving both SharePoint data and mailboxes for finance department users on-premises.

In this context, D is a better choice because it explicitly maintains the security of both the SharePoint data and the mailboxes for the finance department. This option comprehensively addresses potential security and compliance risks while allowing for a broader migration of other services to Microsoft 365.

So, in my opinion the best option is D.

upvoted 2 times

☐ 👤 **olga_tena** 8 months, 1 week ago

I success guess the Microsoft exam make us to be a good product seller.Cause they want our customers move everything to the cloud ,remain nothing on-premise.They can provide the great security to sell.Don't worry about cost OK?Cause the cost is not the point.

upvoted 3 times

Atos 2 years ago

Migrating encrypted 3rd party data, so what tool you using for that?
For me that confirms its not A. Must be B.

upvoted 1 times

atommo999 2 years ago

Surely you would have the 3rd party program to unencrypt it, so it can then be migrated

upvoted 2 times

loidy08 2 years, 1 month ago

A, moving all the to O365

upvoted 1 times

A company has an Exchange Server environment. The company plans to migrate to the cloud.

You need to recommend a cloud model that meets the following requirements:

☞ Upgrade the existing email environment

☞ Minimize server and application maintenance

Which model should you recommend?

　　A. Platform as a service (PaaS)

　　B. Windows as a service (WaaS)

　　C. Software as a service (SaaS)

　　D. Infrastructure as a service (IaaS)

Suggested Answer: *C*

C (100%)

😀 **Sleeping_cat** `Highly Voted 👍` 4 years, 3 months ago

Software as a service is a method for delivering software applications over the Internet, on demand and typically on a subscription basis. With SaaS, cloud providers host and manage the software application and underlying infrastructure, and handle any maintenance, like software upgrades and security patching. Users connect to the application over the Internet, usually with a web browser on their phone, tablet, or PC.

upvoted 10 times

😀 **olga_tena** `Most Recent ⊙` 8 months, 1 week ago

`Selected Answer: C`

C. Software as a service (SaaS)

SaaS solutions, like Microsoft 365 (which includes Exchange Online), provide a fully managed email environment. This model reduces the burden of server and application maintenance, as the service provider handles upgrades, security, and infrastructure management.

😀 **Du_MS900** 1 year, 8 months ago

C. Software como serviço (SaaS)

No modelo SaaS, o serviço de e-mail é entregue diretamente na nuvem, e os usuários acessam e utilizam o serviço sem a necessidade de gerenciar servidores e aplicativos locais. Isso ajuda a reduzir a manutenção e atualizações necessárias em comparação com a execução de servidores Exchange locais (on-premises). Portanto, o modelo SaaS é frequentemente usado para serviços de e-mail na nuvem, como o Microsoft Exchange Online, que faz parte do Microsoft 365 (anteriormente Office 365).

DRAG DROP -

You are the Azure administrator for a company. The company uses only Platform as a Service (PaaS).

You need to identify which solution components Microsoft must manage and which solution components your IT staff must manage.

Match each management owner to its component. To answer, drag the responsible party from the column on the left to its component on the right. Each party may be used once, more than once, or not at all.

NOTE: Each correct selection is worth one point.

Select and Place:

Answer Area

Responsible parties	Component	Responsible party
IT staff	Applications	
Microsoft	Operating systems	
	Storage	
	Application data	

Answer Area

Suggested Answer:

Responsible parties	Component	Responsible party
IT staff	Applications	IT staff
Microsoft	Operating systems	Microsoft
	Storage	Microsoft
	Application data	IT staff

Iaas -Virtual MAchine

Paas- Website hosting,application developing,

SAAS- online services

upvoted 1 times

☐ 👤 **IRONR2D2** 11 months, 1 week ago

It is correct.

As I understood, if the answer is similar to question number 8, should be

PaaS

LaaS

SaaS

--> Website hosting should be Paas

upvoted 1 times

☐ 👤 **Du_MS900** 1 year, 2 months ago

Website hosting (Paas): Hospedagem de site (Plataforma como Serviço - PaaS)

A virtual machine that runs Linux (IaaS): Uma máquina virtual que executa Linux (Infraestrutura como Serviço - IaaS)

Document storage that uses OneDrive for Business (SaaS): Armazenamento de documentos que utiliza o OneDrive for Business (Software como Serviço - SaaS)

upvoted 1 times

☐ 👤 **[Removed]** 1 year, 7 months ago

Paas, Iaas, Saas

upvoted 2 times

☐ 👤 **MauroPistis** 1 year, 9 months ago

The following components can be classified as:

Website hosting: Infrastructure as a Service (IaaS) or Platform as a Service (PaaS) depending on the deployment model. IaaS if the organization is responsible for managing the operating system and middleware, and PaaS if the cloud provider manages the operating system and middleware.

A virtual machine that runs Linux: Infrastructure as a Service (IaaS). This component would be hosted on a virtual machine in the cloud and the organization would be responsible for managing the operating system, middleware, and applications.

Document storage that uses OneDrive for Business: Software as a Service (SaaS). This component is a cloud-based service that provides document storage and collaboration capabilities, and is fully managed by Microsoft.

Classifying components is important as it helps organizations determine the level of responsibility they have for managing the component and the level of control they have over it.

upvoted 1 times

☐ 👤 **Chipper** 2 years, 5 months ago

another vague/worthless question from MS.

Website hosting is IaaS if you are using your VMs to host the site. If you are using webapps to host a site, it is Saas.

One drive is considered IaaS per the diagram here - https://azure.microsoft.com/en-us/resources/cloud-computing-dictionary/what-is-paas/

Hosting your own Linux VMs is definitely IaaS.

upvoted 1 times

☐ 👤 **Chipper** 2 years, 5 months ago

Sorry I got a few of the acronyms confused/typoed...

Website hosting is IaaS if you are using your VMs to host the site. If you are using webapps to host a site, it is PaaS.

One drive is considered SaaS per- https://azure.microsoft.com/en-us/resources/cloud-computing-dictionary/what-is-paas/ since it is a part of O365

upvoted 2 times

☐ 👤 **Alesepul2008** 2 years, 5 months ago

paas,iass,saas

upvoted 2 times

☐ 👤 **Cyrexx** 2 years, 5 months ago

Website Hosting: Means you need a machine running already with Server OS to deploy your web site, Like Apache Web Server = PaaS

VM Running Linux: Any VM means you need hardware = Iaas

Document Storage that uses one Drive :

two part here : 1- Doc. Storage

2- One Drive

- If it was for DOC. storage only, that would be = IaaS

But because they said (Uses one Drive) = Means it will use OneDrive software which is a a could APP that helps you manage storage.

so the correct answer would be = SaaS

upvoted 4 times

☐ 👤 **Allan79** 2 years, 9 months ago

PAAS, IAAS e SAAS

upvoted 2 times

☐ 👤 **Lyonel** 3 years, 8 months ago

Sorry... in further reviewing, it looks like the answers should ALL be IaSS. (OR, let me know if I confused myself)

Here' why:

1. IaaS for Web hosting - Running websites using IaaS can be less expensive than traditional web hosting.
https://azure.microsoft.com/en-us/overview/what-is-iaas/

2. IaaS for Virtual Machine that runs Linux - Virtual Machines (VMs) consist of infrastructure to deploy an application.
Question specifies about the VM, which is IaaS; Linux is a PaaS running on the VM:
https://azure.microsoft.com/en-us/blog/infrastructure-as-a-service-series-virtual-machines-and-windows/

3. IaaS for Document STORAGE that uses OneDrive for Business - OneDrive is a cloud-based storage service where you can view, browse, upload, and share the files you saved online.
Question is regarding the Document STORAGE, which lies in IaaS; question is NOT about OneDrive which is PaaS:
https://azure.microsoft.com/en-us/overview/what-is-iaas/

Let me know if I missed the boat on this one, please.

DRAG DROP -

You are the Microsoft 365 administrator for a company that uses only on-premises resources. The company does not have a private cloud.

You need to deploy cloud-based resources for the company that minimize costs.

Which cloud models should you use? To answer, drag the appropriate cloud models to the correct requirements. Each cloud model may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Select and Place:

Answer Area

Cloud models	Requirement	Cloud model
Private	Provide an on-demand sandbox environment.	
Public	Provide failover capabilities between local resources that you manage and resources in other regions.	
Hybrid	Deploy virtual machines that use custom peripheral devices.	

Suggested Answer:

Answer Area

Cloud models	Requirement	Cloud model
Private	Provide an on-demand sandbox environment.	Public
Public	Provide failover capabilities between local resources that you manage and resources in other regions.	Public
Hybrid	Deploy virtual machines that use custom peripheral devices.	Hybrid

---

👤 **TMW** `Highly Voted 👍` 4 years, 3 months ago

sandbox = public

failover between local resources, and those in other regions = hybrid

virtual machines using custom peripheral devices = hybrid

upvoted 40 times

👤 **TheBlackHandOfTime** 7 months ago

Its Public, Public, Private.

Why would we use a Hybrid model and deploy resources to TWO services (Azure AND On-Prem) when we can deploy just to On-Prem, ESPECIALLY when on-prem DOESNT EXIST for this company as it states, so it will need to be setup anyway. No need to overdo it.

PUBLIC

PUBLIC

PRIVATE

upvoted 1 times

👤 **wando5000** 3 years, 6 months ago

I've done both Azure exams (AZ900, DP900) and can say that;

redundancy/failover is a big selling point with Azure (3 copies of data stored either between 3 racks in a single data centre, between 3 data centres in a single region or between regions depending on how much you want to spend)

MS Azure have split up the world into regions (the question specifically says "resources in other regions")

So I think the answer is public (Azure)
upvoted 11 times

agree with you, since we don't have private model deployed , why need to pay for it and can use hybrid !
upvoted 1 times

   ☐ 👤 **B1T3X** 4 years, 2 months ago
You know that Private + Public = Hybrid, right? If you use Hybrid cloud that means you have a Private cloud & you use the Public cloud at the same time.
upvoted 5 times

      ☐ 👤 **wando5000** 3 years, 6 months ago
Not stictly correct
A hybrid cloud can be a private + public cloud as you say
But a hybrid cloud can also be on premises computing + public

A private cloud is not the same as on premises computing.
A private cloud is a hardware host (memory/processing/storage) with a hypervisor installed that lets you create VMs
On premises computing can be a traditional physical server (usually in a data center) running an application like Exchange
upvoted 11 times

☐ 👤 **wando5000** 2 years, 8 months ago
When they say 'local' resources does that mean on premise or 'in your Azure region'
If its on premise then Hybrid but if its your Azure region then public
upvoted 5 times

   ☐ 👤 **Irism** 2 years, 4 months ago
local = on prem indeed

👤 **KakTak** 2 years, 7 months ago

I think that the PUBLIC should be on all 3.
  upvoted 1 times

👤 **BTL_Happy** 2 years, 8 months ago

Public

Hybrid

Hybrid
  upvoted 1 times

👤 **PatrickH** 2 years, 11 months ago

"You need to deploy cloud-based resources for the company that minimize costs."

Thats in the question. Therefore id say Public - Hybrid - Hybrid.

The third one is the controvertial one. I say Hybrid because you have to go cloud but those machines with custom devices can be kept local/private while still using the power of the public cloud for other services hence Hybrid.

Just my take, it is a bit ambiguous, but I have have passed both AZ900 and MS900, not boasting!
  upvoted 1 times

   👤 **wando5000** 2 years, 11 months ago

Yeah - I think for the third one it must be a VM in the public cloud (cheaper than building a private cloud). But the custom peripheral devices will need to be on premise (using redirection). So that makes it hybrid

upvoted 1 times

☐ 👤 **Contactfornitish** 3 years, 3 months ago

Public Public Private

Hybrid is ambiguous

upvoted 3 times

☐ 👤 **Clouddog** 3 years, 5 months ago

Same question as 53 only the third there talks about USB devices support as being Private cloud. Bit confusing these questions.

upvoted 2 times

upvoted 11 times

This question requires that you evaluate the underlined text to determine if it is correct.

Microsoft 365 is a Platform as a service (PaaS).

Review the underlined text. If it makes the statement correct, select `No change is needed.` If the statement is incorrect, select the answer choice that makes the statement correct.

    A. Infrastructure as a service (IaaS)

    B. Windows as a service (WaaS)

    C. Software as a service (Saas)

    D. No change is needed

Suggested Answer: *C*

Microsoft 365 is SaaS, which provides an online version of MS Office Suite (Office Web Apps) along with SharePoint Server, Exchange Server and Lync Server.

Anwer is Yes No.

Read well the statement's wording, it is saying that the MFA server is on-premise, not that the proxy app is on-premise.

The documentation is clear about the possibility of protecting proxy apps that are on cloud or on-premise, it is possible, but if you want to use the MFA service in on-premise server, this functionality is deprecated.

Does Azure MFA work with on premise?

If your organization is federated with Azure AD, you can configure Azure AD Multi-Factor Authentication as an authentication provider with AD FS resources both on-premises and in the cloud

upvoted 2 times

☐ 👤 **Cyrexx** 2 years, 12 months ago

https://docs.microsoft.com/en-us/azure/active-directory/authentication/howto-mfa-getstarted

Plan integration with on-premises systems

Applications that authenticate directly with Azure AD and have modern authentication (WS-Fed, SAML, OAuth, OpenID Connect) can make use of Conditional Access policies. Some legacy and on-premises applications do not authenticate directly against Azure AD and require additional steps to use Azure AD Multi-Factor Authentication. You can integrate them by using Azure AD Application proxy or Network policy services.

The question is about securing "web apps", i think that can be achieved by MFA in the cloud.

upvoted 3 times

wando5000 3 years, 6 months ago

Both are correct

MFA is a feature of Azure AD (The verification prompts are part of the Azure AD sign-in event, which automatically requests and processes the MFA challenge when required.)

Azure AD Application Proxy consists of two parts:
The cloud-based service: This service runs in Azure, and is where the external client/user connections are made.
The on-premises connector: An on-premises component, the connector listens for requests from the Azure AD Application Proxy service and handles connections to the internal applications.

upvoted 6 times

wando5000 2 years, 11 months ago

Apologies
according to the link - answers given are correct - you can't use MFA server on premises anymore - it has to be MFA in Azure - so second part is incorrect

IaaS does not have managing OS as a feature, that's PaaS

upvoted 2 times

⊟ 👤 **lunchmode** 3 months, 1 week ago

`Selected Answer: BDE`

From our online training course (Pluralsight), OS is PaaS

IaaS:

-Virtualization

-Servers

-Storage

-Networking

BDE

upvoted 1 times

⊟ 👤 **tony022** 4 months ago

`Selected Answer: CDE`

C. Operating system: IaaS allows users to deploy and manage their own operating systems on virtual machines.

B. Real-time monitoring: While monitoring tools can be used with IaaS, real-time monitoring is not a core feature of IaaS itself. It is often provided by additional services or tools.

upvoted 1 times

⊟ 👤 **bigdaddyzaddy** 6 months, 1 week ago

`Selected Answer: CDE`

A. Business analytics: This is typically part of Software as a Service (SaaS), not IaaS.

B. Real-time monitoring: While IaaS might support tools for monitoring, real-time monitoring is not inherently part of IaaS. Monitoring is often a separate service or tool integrated into IaaS or PaaS environments.

Thus, C, D, and E are the correct answers.

upvoted 2 times

⊟ 👤 **Amits6871** 7 months, 3 weeks ago

The three features that are part of IaaS (Infrastructure as a Service) are:

C. Operating system

D. Servers and storage

E. Firewall and network security

A. Business analytics: This is more of a PaaS or SaaS feature, as it involves services like data processing and analysis, which are typically higher-level services.

B. Real-time monitoring: While real-time monitoring tools can be part of an IaaS offering (via additional services), it's not typically considered a core IaaS feature. Monitoring is often provided separately in IaaS environments or as part of a more specialized service (like SaaS or monitoring tools offered as part of a management layer).

For those who say OS is IaaS, come on really…… you should not be in IT.

upvoted 2 times

YGN_me 1 year, 6 months ago

Hey this is easy guys;

you deploy an app in IaaS meaning you are consuming IaaS services (SCENARIO). So the features (how will IaaS behave) of IaaS will apply in that, what is the CSP responsible for and what you as a consumer is responsible for.

(SOLUTION)IaaS will only be responsible for the remote datacenter, hosting your infrastructure and the physical networking to ensure seamless flow of data in the datacenter, also including real-time monitoring to ensure no faults in the servers, storage facilities and their networking.

Your obligation is manage your OS, Network controls (firewalls,VPNs), your App, device, accounts and identities accessing your app, Identity provider and most importantly your information and data.

You still don't see the answers?

for Business analytics I can say it's a SaaS (software that helps you analyze your data and find possible ways you can use the analytics to get new ideas advancing=from my point of view)

Statement	Yes	No
Companies that have recently invested in hardware and software can use a hybrid cloud model.	○	○
Companies that have few on-premises resources can use a hybrid cloud model.	○	○

This is a vague question. The second answer depends on the definition of a ⅄€few on-premises⅄€ resources.

☐ 👤 **ESEI** `Highly Voted 👍` 3 years, 9 months ago

The question sounds to me like.. "Even you have something which has to be kept in on-premises, you have a choice to use a hybrid cloud model (so why don't you get started with Azure?!)". I would answer Yes and Yes.

upvoted 27 times

☐ 👤 **365admin** `Highly Voted 👍` 3 years, 7 months ago

Hybrid cloud is considered as more complex and requiring specialized IT skills to manage as per Microsoft documentations

So for company that have few resources on-premises, i think the answer is to decommission them and go for public cloud than use a hybrid cloud unless there are specific requirements eg. keep the data on-premise

upvoted 13 times

☐ 👤 **Frank9020** `Most Recent ⊘` 7 months, 3 weeks ago

Yes & Yes - Even if a company has a limited number of on-premises resources, they can still adopt a hybrid cloud approach by integrating their existing infrastructure with cloud services for specific workloads or applications.

upvoted 1 times

☐ 👤 **dawnbringer69** 1 year ago

Microsoft and Marketing go hand in Hand.

1. Yes

2. Yes because the anser says "can use" not "should use". Of course they can! Should they though?

upvoted 2 times

☐ 👤 **YGN_me** 1 year ago

Good reasoning, They can but it's not a must

upvoted 1 times

☐ 👤 **sunr1se** 2 years, 4 months ago

both are yes since any combination of on prem and cloud is hybrid

Azurefox79 2 years, 7 months ago

it ABSOLUTELY DOES!

upvoted 6 times

KeeKo `Highly Voted 👍` 4 years, 1 month ago

Think about this....

Fact: VMs host an OS (e.g. Win10, Linux, etc).

Fact: VMs are considered part of IaaS solution

Fact: Technically IaaS is providing an OS via the VM for the customer....same concepts applies to a SERVER which also hosts an OS (e.g. Win Svr 2019)....all of these OS's make the connections to storage and networking as well.

With that rationale, the answer to: "Infrastructure as a Service (IaaS) provides SERVERS, VIRTUAL MACHINES (VMs), storage, networks, and OPERATING SYSTEMS to customers"....the answer would be YES based on how the statement is worded and the facts that are known.

The trick to these questions is to not get caught up or look way deeper into the question beyond what it is asking. In a lot of these questions, there is a buzz word added that makes the answer more of a NO. That applies to all of these questions in MS-900 or for that matter, all questions on MS exams. MS purposely words these questions to try to get you to think beyond what they are asking. Try not to get wrapped around the axle.

upvoted 16 times

> **wando5000** 3 years, 6 months ago
>
> Thats correct. You buy your VM and can pay extra to have whatever version of Windows/Linux you want installed. There is also Azure Hybrid Benefit which is a licensing benefit that helps you to significantly reduce the costs of running your workloads in the cloud. It works by letting you use your on-premises Software Assurance-enabled Windows Server and SQL Server licences on Azure. And now, this benefit applies to RedHat and SUSE Linux subscriptions too

Correct! OS does not fall under IaaS

upvoted 1 times

jim85 2 years, 4 months ago

https://azure.microsoft.com/en-us/resources/cloud-computing-dictionary/what-is-iaas/

IaaS lets you bypass the cost and complexity of buying and managing physical servers and datacenter infrastructure. Each resource is offered as a separate service component, and you only pay for a particular resource for as long as you need it. A cloud computing service provider like Azure manages the infrastructure, while you purchase, install, configure, and manage your own software—including operating systems, middleware, and applications.

NYY correct

upvoted 2 times

Esmee93 2 years, 4 months ago

For everyone thinking OS falls under IaaS check the link dat jim85 posted.

upvoted 1 times

Azurefox79 2 years, 7 months ago

NO, Yes Yes. First is NO because per the link storage/network/security is not IaaS BUT OS is absolutely IaaS

upvoted 2 times

Azurefox79 2 years, 7 months ago

Please stop upvoting anyone who says IaaS is not OS management. That is ludicrously incorrect and a key differentiator.

upvoted 2 times

dingtheking 2 years, 8 months ago

IaaS is where you can deploy your own choice of operating systems to run on. If the cloud service gives you OS then it is a PaaS.

Neste cenário, onde a empresa deseja integrar alguns serviços do Microsoft 365 com um servidor de aplicativos local, uma escolha adequada seria um modelo de implantação em nuvem híbrido (opção B). O modelo de nuvem híbrida permite a integração e o compartilhamento de dados e aplicativos entre a infraestrutura local (on-premises) e os serviços em nuvem, proporcionando flexibilidade e escalabilidade. Portanto, a opção correta seria:

B. Híbrido

upvoted 1 times

upvoted 13 times

⊟ 👤 **olga_tena** `Most Recent ⊘` 8 months, 1 week ago

Here's how the Microsoft 365 services align with the cloud service models:

- Power Apps - PaaS (Platform as a Service)
- Microsoft 365 apps - SaaS (Software as a Service)
- Azure virtual machines - IaaS (Infrastructure as a Service)

Here's the reasoning:

Power Apps (PaaS): It allows users to create and customize applications tailored to their business needs. Users can build apps using a range of tools and services provided by Microsoft, which means they are leveraging a platform for app development rather than just using a finished software application.

Microsoft 365 apps (SaaS): These are fully functional software applications like Word, Excel, and Outlook that users access and use directly without any customization or development.

In summary, Power Apps focuses on application development and customization, which aligns with the characteristics of PaaS.

upvoted 2 times

⊟ 👤 **[Removed]** 10 months, 2 weeks ago

Microsoft Power Apps is primarily considered a Platform as a Service (PaaS) rather than Software as a Service (SaaS). This is because it allows users to create custom applications using a low-code platform, which provides the tools and infrastructure necessary for development. Users can build, customize, and manage apps according to their specific needs, making it a platform for development rather than just a ready-made software product like SaaS offerings.

upvoted 2 times

⊟ 👤 **Frank9020** 1 year, 1 month ago

It is correct:

Power Apps is classified as a Platform as a Service (PaaS) because it provides a platform for users to create and customize business applications

without the need for extensive coding knowledge. This means that users can leverage the underlying infrastructure and development tools provided by the platform to build and deploy their own applications, making it a PaaS model.

Power Apps: Paas
Microsoft 365 Apps:SAAS
Virutual Machine: IAAS

upvoted 1 times

☐ 👤 **Du_MS900** 1 year, 4 months ago

Power Apps é um serviço de PaaS (Plataforma como Serviço) que oferece uma plataforma para o desenvolvimento de aplicativos sem a necessidade de gerenciar a infraestrutura subjacente.

Microsoft 365 Apps (Word, Excel, PowerPoint) representa um exemplo de SaaS (Software como Serviço), fornecendo aplicativos prontos para uso diretamente aos usuários finais, sem a necessidade de gerenciar a infraestrutura.

Azure Virtual Machines é classificado como IaaS (Infraestrutura como Serviço), pois oferece a infraestrutura de máquinas virtuais, permitindo que os usuários gerenciem o sistema operacional, aplicativos e configurações, proporcionando mais controle sobre a infraestrutura subjacente.

upvoted 1 times

Microsoft Power Apps is a no-code/low-code application development platform that enables users to create custom applications quickly to address specific needs within their organization.

upvoted 1 times

☐ 👤 **jg_85** 1 year, 6 months ago

Microsoft Power Platform is an enterprise application SaaS platform that helps support and extend Microsoft 365, Dynamics 365, and Azure, as well as third-party services and applications.

upvoted 1 times

☐ 👤 **YGN_me** 1 year, 6 months ago

Thinking in a Microsoft 365 perspective Power Apps is a SaaS because it serves me a rapid low code environment for creating custom apps.
When you try to tell MSFT about all you know with Power Apps at a fundamental level, that is when you start seeing a platform in Power Apps which is true but not from a MSFT 365 view.

upvoted 1 times

☐ 👤 **SR1991** 1 year, 6 months ago

Sould be SAAS, SAAS and IAAS.
Power apps can indeed been seen as SAAS, but also as PAAS. We can create the applications without worrying about the underlying infrastructure. So that would make it PaaS.

But if you see the the information that Microsoft provided it is SAAS:
Power Apps is a Software as a Service (SaaS) platform that's designed to let you quickly build high-functioning apps that you can deploy to the web, SharePoint, Dynamics 365, Teams, Power BI, or a mobile device without any extra work. Because you can deploy them by just giving someone the URL to your published app, they're also just as easy to update.

A company plans to migrate on-premises infrastructure to the cloud.

What are three benefits of migrating to the cloud? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

    A. Reduce configuration requirements on desktop computers.

    B. Reduce on-site network latency.

    C. Automate data backup and disaster recovery.

    D. Scale and extend applications.

    E. Eliminate the cost of buying server hardware.

Suggested Answer: *CDE*

C: Most cloud providers help to improve business continuity by offering built-in, one-click backup and recovery capabilities. Some providers also offer the ability to store backups in different geographic regions.
D: When demand spikes or the organization needs more powerful compute resources, organizations can alter their resources instantly on demand.

E: There are significant savings in resource, maintenance, and real estate costs, in addition to the ability to optimize workloads so that they cost less to run.

As três respostas corretas que representam benefícios da migração para a nuvem são:

C. Automatize o backup de dados e a recuperação de desastres.

- Migrar para a nuvem permite a automação eficiente de backups e recuperação de dados, proporcionando uma abordagem mais segura e confiável para a gestão de dados.

D. Dimensionar e ampliar aplicativos.

- Na nuvem, é mais fácil dimensionar e ampliar aplicativos conforme necessário, permitindo que a empresa ajuste seus recursos de acordo com as demandas do negócio.

E. Elimine o custo de compra de hardware de servidor.

- Ao migrar para a nuvem, a empresa não precisa investir em hardware de servidor físico, o que pode resultar em economias significativas de custos.

Portanto, as opções C, D e E representam benefícios completos da migração para a nuvem.

`Selected Answer: CDE`

A-Desktop Computers ? This option does not make sense.

B-Moving to the cloud does not solve network latency issues the company currently has.

upvoted 2 times

☐ 👤 **fxc119** 2 years, 8 months ago

A. is definately a perk of migrating to the cloud. Intune and Autopilot are really good rollout solutions for desktop configurations

- It doesnt completely eliminate the cost of on prem servers, regardless a hybrid environment is still considered in the cloud model. The answer is definitely A,C,D

upvoted 1 times

☐ 👤 **pgonza** 2 years ago

You mean the cloud doesn't help us save the cost of hardware? I think Configuration Manager on-prem can do what Intune does.

upvoted 1 times

☐ 👤 **fxc119** 2 years, 8 months ago

upvoted 10 times

☐ 👤 **Billbo555** `Most Recent ⊙` 1 year, 1 month ago

By far, the most vague question ever. No context to any of this whatsoever.

upvoted 2 times

☐ 👤 **AceVander** 1 year, 3 months ago

yes this is a ridiculous question because M365 is considered a SaaS cloud service. However, this is what I think could be their line of thinking (and yes it is a stretch) All of these answers intersect but this could be what they are looking for. I really hope if it not on the exam.

IaaS = Services Page
The Services Page uses Azure and according to Microsoft.com Azure is IaaS because the Services page uses servers, storage, and/or OS where the user can deploy and manage their own applications.

PaaS = Book Page
The Booking page is an application/ app that is run on a platform that is developed, deployed, managed. Customers interact with the booking page app platform for scheduling while the provider manages the infrastructure, middleware, OS, and runtime for the page.

SaaS = Booking Calendar
because it is a complete software solution hosted/ managed by the provider that the user accesses via a web browser or API, taking care of all underlying infrastructure, security, and maintenance.

   upvoted 10 times

☐ 👤 **NoursBear** 1 year, 3 months ago

Lots of presumption required here. First staff page is just a spanner in the works so from the 4 offerings one was fake. The other one is booking page, we need to presume it's a web page developed with PaaS. Services page, again presume it's to do with a monitoring page to monitor the IaaS components that the customer is responsible for, like someone suggested. A long shot but I think we can be creative here.

   upvoted 2 times

don't understand the question at all....

   upvoted 3 times

☐ 👤 **rajatkatal1234566** 1 year, 6 months ago

Booking calender is cloud based app so it is Saas
booking page, service page and staff page to created using power apps so it should be Paas
Iaas where we get nothing but a empty room with four wall and security guard.

   upvoted 3 times

☐ 👤 **_GMC_** 1 year, 8 months ago

I don't think this question is correct

   upvoted 1 times

☐ 👤 **RahulX** 1 year, 11 months ago

Booking Calendar, Booking Page, Staff Page and Service Page are all part of Microsoft 365 services. They are not IaaS (Infrastructure as a Service) products. Microsoft 365 is a SaaS (Software as a Service) product.

   upvoted 4 times

☐ 👤 **Atos** 2 years ago

What is this on about? lol ;-}

   upvoted 3 times

☐ 👤 **rpajalunga** 2 years, 2 months ago

IMHO should be a mistake in terms used. If I re-analyze the "offering" information as equivalent of the "cloud model" the answers are correct: so "Services page" as root, "Staff page" and "Booking page" as children and same level, "Booking calendar" as child of "Booking page", solution seems to be correct and logic...

   upvoted 1 times

☐ 👤 **Kelsi999** 2 years, 2 months ago

To my opinion the question and answers are wrong (except Booking Calendar). On the left side we see the different features of Microsoft Bookings - which is a SaaS solution, so all should be SaaS

   upvoted 6 times

☐ 👤 **MslK** 2 years, 4 months ago

I honestly don't understand the question at all, but like all things that one has to accept in life without having an understanding of... I'll have to take it as it is. 🫠

   upvoted 6 times

☐ 👤 **Jothar** 2 years, 5 months ago

Guessing that this question was memorized or screenshotted incorrectly. I had that with the az-900 for one question, where it didn't make sense here but made sense on the test

upvoted 1 times

shadowalka 2 years, 6 months ago

My thoughts are and correct me if you disagree: Bookings calendar - Outlook type app, therefore, SaaS. Bookings page - web page or app created within PaaS. Staff page - a web page or app created within PaaS and Services page - a web page or app or whatnot created within IaaS to monitor Infrastructure services. Could be wrong but makes sense to me.

upvoted 2 times

Azurefox79 2 years, 7 months ago

Invalid, its a mistake

upvoted 7 times

Amna2024 `Most Recent` 11 months, 2 weeks ago

Microsoft Dynamics 365 is primarily an enterprise resource planning (ERP) and customer relationship management (CRM) suite. It provides tools for managing business functions such as sales, customer service, finance, operations, and human resources.

Endpoint protection security solutions, on the other hand, are designed to protect devices such as computers, smartphones, and other endpoints from cyber threats. Microsoft's endpoint protection solutions are provided by other products like Microsoft Defender for Endpoint.

upvoted 3 times

Du_MS900 1 year, 4 months ago

- **Microsoft Dynamics 365 provides a remote assistance solution?**
- Sim. O Microsoft Dynamics 365 inclui uma solução chamada "Dynamics 365 Remote Assist" que oferece assistência remota e colaboração em tempo real usando realidade mista.

- **A customer relationship management solution?**
- Sim. O Microsoft Dynamics 365 inclui um conjunto de aplicativos para gerenciamento de relacionamento com o cliente (CRM). Ele oferece funcionalidades abrangentes para a gestão de vendas, atendimento ao cliente, marketing e muito mais.

- **Endpoint protection security solution?**

- Não. O Microsoft Dynamics 365 não é uma solução de segurança de endpoint. Ele é mais focado em soluções para gerenciamento de relacionamento com o cliente e automação de processos empresariais. Para segurança de endpoint, você pode considerar produtos como o Microsoft Defender Antivirus.

Suggested Answer:

Answer Area

Statements	Yes	No
Microsoft Teams can run as a service on-premises.	○	○
Microsoft Exchange Server 2019 can run as a service on-premises.	○	○
Microsoft Bookings can run as a service in the cloud.	○	○

Box 1: No -

Is Microsoft teams available on premise?

No, Microsoft Teams is designed to function with SharePoint Online and the Azure Active Directory. While it may be possible to gain some functionality in a hybrid environment, the full features of Microsoft Teams are not available in an on-premises installation.

Box 2: Yes -

Exchange 2019 helps lower the total cost of ownership whether you deploy Exchange 2019 on-premises or provision your mailboxes in the cloud.

Box 3: Yes -

Bookings in Microsoft Teams lets you track, manage, and organize your team's appointments and calendars all in one place. You can create a Bookings calendar and add team members to it, build new appointment types, and create and manage in-person and virtual visits for your staff and attendees.

Bookings is integrated with your Microsoft 365 or Office 365 calendar to help your customers quickly find available times and avoid double-booking.

Statements	Yes	No
A cloud provider can provide maintenance and security protection for server hardware.	○	○
A cloud storage provider can include built-in redundancy and automatic logging.	○	○
A cloud provider can manage on-premises resource hardware.	○	○

A cloud service provider is a third-party company offering a cloud-based platform, infrastructure, application, or storage services.

Besides the pay-per-use model, cloud service providers also give companies a wide range of benefits. Businesses can take advantage of scalability and flexibility by not being limited to physical constraints of on-premises servers, the reliability of multiple data centers with multiple redundancies, customization by configuring servers to your preferences, and responsive load balancing that can easily respond to changing demands.

`Selected Answer: CDE`

C. Use Windows AutoPilot to deploy devices
AutoPilot simplifies and automates the deployment of new devices, reducing manual setup and configuration time for IT staff.

D. Deploy Microsoft MyAnalytics to devices
MyAnalytics helps users understand and improve their work habits, potentially reducing support requests related to productivity tools and time management.

E. Deploy Microsoft Office 365 Professional Plus to all client devices
Standardizing Office installations ensures compatibility, reduces software-related issues, and simplifies support.

upvoted 1 times

👤 **Alu21** 1 year, 3 months ago

This question is all about upgrading the question itself is bad, upgrade all device to win 10, assume they used win 7/8, deploy this devices using autopilot , use Microsoft office 365 assume upgrade from an old version of office

upvoted 1 times

⊟ 👤 **Du_MS900** 1 year, 4 months ago

Para reduzir o tempo que a equipe de TI gasta no suporte ao usuário, considere as seguintes soluções:

1. **Atualize todos os dispositivos clientes para Windows 10:**
- Padronizar em uma versão mais recente do sistema operacional simplifica o suporte, oferecendo recursos avançados e melhor gerenciamento de dispositivos.

2. **Use o Windows AutoPilot para implantar dispositivos:**
- A automação do processo de provisionamento de dispositivos com o Windows AutoPilot pode reduzir significativamente o tempo gasto em configurações manuais.

3. **Implantar o Microsoft Office 365 Professional Plus em todos os dispositivos clientes:**
- Padronizar a suíte de produtividade simplifica o suporte, proporcionando uma configuração mais consistente e aproveitando ferramentas de gerenciamento centralizado do Office 365.

Essas abordagens oferecem soluções completas para alcançar o objetivo de eficiência no suporte ao usuário.

Correct. Proplus (Office Microsoft 365 Apps for enterprise)

upvoted 12 times

☐ 👤 **TypeRR** `Most Recent ⊘` 6 months, 3 weeks ago

In other question, it said that Office 365 ProPlus even not a license name.

In this question,Office 365 ProPlus is a normal product.

real redicurious question.

upvoted 2 times

☐ 👤 **Massdi** 1 year, 9 months ago

Only M365 can install on mutiple devices (maximum 5 devices), and receive updates and new fetures.

Office standard- receive updates, but it doesn't receive new features.

Also Office standard, for example- office 2019: can be activated in only 1 computer per product key. / If you want to use in more than 1 computer,then you have to buy multiple product keys.

ProPlus on both

Standard versions do not receive new features
ProPlus needed to install on more than one device

upvoted 6 times

HOTSPOT -

A company plans to deploy Microsoft Intune.

Which types of apps can be managed by Intune?

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Statement	Yes	No
Intune supports management of apps from third-party stores.	○	○
Intune supports volume licensing of iOS and Android store apps.	○	○
Intune supports the management of line-of-business and public-facing apps.	○	○

Suggested Answer:

Answer Area

Statement	Yes	No
Intune supports management of apps from third-party stores.	○	●
Intune supports volume licensing of iOS and Android store apps.	●	○
Intune supports the management of line-of-business and public-facing apps.	●	○

---

hansw89 `Highly Voted` 3 years, 9 months ago

The tricky thing about the first question is, that you have to deploy the app from intune in order to manage it. Of course, you can deploy apps from 3rd party stores with Intune, but if a user installed it from the app store directly, it's not a managed app for Intune...

upvoted 38 times

kxxs 3 years, 7 months ago

thanks

upvoted 1 times

Lipseal 2 years, 12 months ago

Looks like intune doesn't support 3rd party STORES, only google play when it comes to android ....."Intune supports available apps from Managed Google Play store on Android Enterprise" devices......https://docs.microsoft.com/en-us/mem/intune/apps/app-management

upvoted 1 times

wando5000 2 years, 5 months ago

I disagree

When you browse to the MS endpoint manager admin centre\App\allApps\select App type\ store App

some of the options are;

android store app

iOS store app

Windows phone 8.1 store app

managed google play app

upvoted 7 times

⊟ 👤 **kiik32** 9 months, 1 week ago

  the question does not (1) especify if the app was INSTALLED from the third party store, so without that context is unclear

  upvoted 1 times

⊟ 👤 **Reempje** `Most Recent ⊘` 1 month, 3 weeks ago

  Google play is a 3rd party store, and you can manage that through intune.

  upvoted 1 times

⊟ 👤 **kiik32** 9 months, 1 week ago

  1 should be yes intune supports thir party store apps

  https://learn.microsoft.com/en-us/mem/intune/apps/apps-add

  upvoted 1 times

⊟ 👤 **wsrudmen** 11 months ago

  YES -

  From => https://learn.microsoft.com/en-us/mem/intune/apps/apps-add

  Apps written in-house or as a custom app (line-of-business)

  Intune installs the app on the device (you supply the installation file).

  You must update the app.

upvoted 2 times

You are the Microsoft 365 administrator for a company.

You install Microsoft Office 365 ProPlus on five devices. You deactivate the Microsoft Office 365 ProPlus license on one device.

Which task can you perform on the deactivated device?

- A. Edit a column
- B. Create a document
- C. Co-author a document
- D. View a document

Suggested Answer: *D*

When you deactivate a Microsoft Office 365 ProPlus license, Office 365 ProPlus remains installed on the computer, but you can only view and print documents. All features for editing or creating new documents are disabled.

Note:

There are several versions of this question in the exam. The question has two possible correct answers:

1. View a document

2. Print a document

Other incorrect answer options you may see on the exam include the following:

1. Leave a comment in a document.

2. Start a new document from a template.

3. Set properties on a document.

4. Create a document

5. Edit a document

6. Co-author a document

7. Edit a column

DRAG DROP -

Match each Microsoft 365 feature to its availability.

Instructions: To answer, drag the appropriate feature from the column on the left to its availability on the right. Each feature may be used once, more than once, or not at all.

NOTE:

Each correct match is worth one point.

Select and Place:

Answer Area

Features	Availability	Feature
Private preview	Can be turned on for evaluation.	
Public preview	Available to specific customers	
General availability	Compliance testing completed	
	Available for purchase	

Suggested Answer:

Answer Area

Features	Availability	Feature
Private preview	Can be turned on for evaluation.	Public preview
Public preview	Available to specific customers	Private preview
General availability	Compliance testing completed	Private preview
	Available for purchase	General availability

👤 **Tez1** `Highly Voted 👍` 3 years, 8 months ago

"compliance testing completed" surely means that the test have been finished. If this is the case, then the answer would be general availability?

upvoted 25 times

👤 **MarScrambler900** `Highly Voted 👍` 2 years, 9 months ago

I found this article.

- With compliance testing, there are two important concepts to consider: compliance testing and compliance checks.

- Compliance testing ensures that the output of each development lifecycle phase conforms to agreed-upon requirements.

https://learn.microsoft.com/en-us/azure/developer/terraform/best-practices-compliance-testing

Public, Private, Private(or all options are correct), GA

upvoted 8 times

👤 **NSA_Poker** `Most Recent ⊘` 8 months ago

private->public->general->end-of-life (lifecycle)

private & public differ in scope. Public has more users. These 2 stages are so that MicroSoft can gain feedback. The feedback received are test

results. Private & Public are testing stages & the users are the guinea pigs. When testing is complete, product is released for general availability stage.

upvoted 1 times

👤 **momowagdy** 1 year, 10 months ago

https://vunvulear.medium.com/differences-between-ga-private-and-public-preview-on-azure-services-and-features-7ccdd42aa294

upvoted 1 times

👤 **zeuge** 5 months, 3 weeks ago

1-Private, 2-Public, 3-GA, 4-GA

Private Preview:

Limited access only for trusted testers or partners.

Not announced to a wide audience.

Public Preview:

Available to a limited number of external customers who, for example, applied for testing.

Already announced, but it may have bugs or limitations.

General Availability (GA) covers two levels: after testing is completed (Compliance testing completed) and when it becomes available for purchase (Available for purchase).

upvoted 1 times

👤 **KakTak** 2 years, 7 months ago

Compliance testing completed could be Private because compliance testing is basically a kind of an audit which is done on the system to check if all the specified standards are met or not. Very hard to know for sure what the answer is but I would go for Private.

upvoted 4 times

👤 **Broniac** 3 years ago

Public,Private,GA and GA

Your company has a Microsoft Office 365 subscription.

You need to co-author files with other users.

Which tool should you use?

    A. Microsoft SharePoint Online

    B. Microsoft Skype for Business Online

    C. Microsoft Office Delve

    D. Microsoft Exchange Online

Suggested Answer: *A*

Community vote distribution

A (100%)

PadmarajV 10 months ago

Microsoft SharePoint online

  upvoted 2 times

JayLearn2022 1 year, 9 months ago

The tool that should be used to co-author files with other users in Microsoft Office 365 subscription is A. Microsoft SharePoint Online.

SharePoint Online is a cloud-based platform that enables users to store, organize, and collaborate on files and documents. Co-authoring is a key feature of SharePoint Online, allowing multiple users to work on the same document simultaneously.

Skype for Business Online is a communication tool for instant messaging, voice, and video calls, but it doesn't support co-authoring files.

Office Delve is an intelligent search and discovery tool that helps users find and organize content across Office 365, but it doesn't support co-authoring files.

Exchange Online is an email and calendar platform, but it doesn't support co-authoring files.

☐ 👤 **Du_MS900** 9 months, 3 weeks ago

A. O link http://insider.office.com direciona para o programa "Office Insider" da Microsoft. Este programa permite que os usuários experimentem antecipadamente versões de pré-lançamento do software Office 365, testando novos recursos e fornecendo feedback à Microsoft antes do lançamento oficial para o público em geral.

C. definir personalização no perfil organizacional

upvoted 1 times

☐ 👤 **[Removed]** 1 year, 3 months ago

I think the answer is maybe A and C. The words "users" means "users in the IT depertment". How do you think?

upvoted 2 times

☐ 👤 **ToBu90** 7 months, 1 week ago

The question would have been phrased better if it said "instruct users in the IT department" instead of just "users"

upvoted 1 times

☐ 👤 **Murtuza** 1 year, 7 months ago

Answers are A and C

upvoted 3 times

☐ 👤 **ExamNiq** 1 year, 10 months ago

Hmm I would categorize 'preview' users as users who are 'targeted'. So these users get the software first as a 'preview'. Therefore C -> set users to targeted and then they must update office to receive this new baseline. B.

Guess letting your users become insiders is a bit far stretched I guess? but again the question is not very clear to me.

https://support.microsoft.com/en-us/office/when-do-i-get-the-newest-features-for-microsoft-365-da36192c-58b9-4bc9-8d51-bb6eed468516

upvoted 3 times

☐ 👤 **ExamNiq** 1 year, 10 months ago

Also the answer CandA is a bit weird, why put the users in targeted (c) and then in Insider (a) release track?

upvoted 1 times

☐ 👤 **Zero_0** 11 months, 1 week ago

It seems like an "overkill" for me too. First you target the users, then ask them to become an insider as well? What's the use of targeting them in the first place? I would go for C and B too.

upvoted 1 times

☐ 👤 **Allan79** 2 years, 9 months ago

Acredito que A esta meio inconclusiva deixa em aberto, a C esta correta.

upvoted 1 times

☐ 👤 **H3mn** 2 years, 10 months ago

I think C is the only one, the A is incomplete as said users!!

upvoted 4 times

□ 👤 **JK9125** 2 years, 12 months ago

if A is correct, it should read "Instruct IT users ..."

upvoted 4 times

□ 👤 **Tez1** 3 years, 2 months ago

A and E seems like a better answer?

No mention of normal users needing the latest updates, so standard release seems better?

upvoted 1 times

□ 👤 **natazar** 3 years, 1 month ago

in E you turn it for all users, not just IT ones

upvoted 3 times

Question #93 — Topic 1

A company has a Microsoft 365 subscription. You deploy Windows 10 devices by using Windows Autopilot.

You need to ensure that team members can access data that is stored in OneDrive for Business when team members are at remote sites.

What should you do?

- A. Enroll team members in Microsoft Azure AD multi-factor authentication.
- B. Add the devices to Microsoft 365 using the Devices tile.
- C. Enroll devices in Microsoft Intune.
- D. Direct team members to sign in to their devices using their Microsoft Azure AD credentials.

Suggested Answer: *D*

Community vote distribution

D (100%)

TMW `Highly Voted` 3 years, 9 months ago

The only way to access OneDrive is via credentials. Because it is a cloud solution, you can login from anywhere you can reach the internet. The other options are simply there to throw you off.

Ans. is D

upvoted 25 times

بدون شک گزینه آخر درست هستش

D

upvoted 1 times

---

rajatkatal1234566 1 year ago

This is tricky question. As they have not mentioned there that you have to use your personal device to login. in that case the answer would be c but as it is not mentioned here so the answer is D.

upvoted 2 times

BeckhamBoy23 2 years, 4 months ago

answer is correct

upvoted 2 times

---

delight_1 3 years, 2 months ago

What a confusing question. Everyone knows that the users can just log-in to O365 directly. How OneDrive access is related to the AutoPilot? What if there's conditional access where users cannot log-in to ODB anywhere (not sure though if this is possible)?

upvoted 4 times

delight_1 3 years, 2 months ago

**Everyone knows that the users can just log in to OneDrive directly.

upvoted 1 times

---

syu31svc 3 years, 6 months ago

Answer is correct; you just need to have an account to log in

upvoted 1 times

---

hvtsoftball11 3 years, 8 months ago

Correct

upvoted 2 times

Gerardo1971 3 years, 9 months ago

Correct answer

upvoted 1 times

TheExpert 4 years, 5 months ago

Answer D is correct.

By default, there is no "conditional access" rule in OneDrive for Business, you can access it from any site, you just have to log-in

queayai 4 years, 5 months ago

Is the answer D because using Azure AD authentication would enable MFA?

thorntona02 4 years, 3 months ago

The MFA option is just to drive you off, the question is related to Autopilot alone.

With autopilot, the devices the users receive are previously imaged and prepared by the manufacturer himself. Microsoft announced several manufacturer that have adopted autopilot.

Once the device is delivered to the end user all they have to do is simply login with their account details, policies will download during this initial setup process. This takes the heavy load from the IT guys that are no longer required to touch the devices.

Besides that, users will have that unbox experience and the setup is a breeze.

NoursBear 9 months, 1 week ago

unrelated to the question

nandoacesso 4 years, 5 months ago

where is automatically enabled when the deploy process is via Windows AutoPilot.

nandoacesso 4 years, 5 months ago

maybe it´s D because in order to use ODfB they need first login in to their machines.

You are a Microsoft 365 administrator for a company.

Microsoft plans to release a new feature for Microsoft Excel.

You need to ensure that the feature becomes available for employees to install as soon as possible.

To which release channel should you subscribe?

    A. Microsoft release

    B. Standard release

    C. Office 365 team release

    D. Targeted release

Suggested Answer: *D*

subansal `Highly Voted 👍` 4 years, 11 months ago

This is right answer. Please follow the article : https://docs.microsoft.com/en-us/office365/admin/manage/release-options-in-office-365?view=o365-worldwide

Ring 0 - Product engineering team
Ring 1 - Microsoft internal testing team (actually users who are part of testing)
Ring 2 - Microsoft employees
Ring 3- Targeted users (who are willing to test the feature before standard release)
Ring 4 - Standard when MS release the build for all (GA)

upvoted 42 times

Wilson9cl `Highly Voted 👍` 3 years, 7 months ago

Question probably isn't used anymore. Microsoft isn't using the term 'targeted' anymore for deployment rings. I would look for the terms such as 'Insider' or 'Preview' now.

upvoted 12 times

    ExamNiq 1 year, 10 months ago

    Still there: https://admin.microsoft.com/Adminportal/Home?#/Settings/OrganizationProfile/:/Settings/L1/ReleasePreferences

    upvoted 2 times

Du_MS900 `Most Recent ⊘` 9 months, 3 weeks ago

Para garantir que o novo recurso do Microsoft Excel esteja disponível para instalação pelos funcionários o mais rápido possível, você deve se inscrever no canal de lançamento "Liberação direcionada" (D). Este canal permite que os usuários recebam as atualizações mais recentes assim que estiverem disponíveis para um grupo selecionado de usuários na organização, antes do lançamento geral para todos os usuários.

Portanto, a resposta correta é:

D. Liberação direcionada

https://docs.microsoft.com/en-us/microsoft-365/admin/manage/release-options-in-office-365?view=o365-worldwide:

"Targeted release

With this option, you and your users can be the first to see the latest updates and help shape the product by providing early feedback. You can choose to have individuals or the entire organization receive updates early."

Answer is D 100%

upvoted 2 times

☐ 👤 **Gerardo1971** 3 years, 9 months ago

Correct answer

upvoted 2 times

☐ 👤 **Ant0ny_D** 3 years, 9 months ago

The release preferences only apply to Microsoft 365, SharePoint Online, and Exchange Online. They do not apply to Microsoft 365 Apps, Skype for Business, Microsoft Teams, and related services.

Office applications work with update channels and are named differently:

https://docs.microsoft.com/en-us/deployoffice/overview-update-channels

Correct answer (not included) should therefore be the 'Current Channel'.

upvoted 7 times

☐ 👤 **ExamNiq** 1 year, 10 months ago

This, they want Microsoft Excel, guessing the desktop app, so CURRENT channel would apply and set elsewhere.

upvoted 1 times

☐ 👤 **NoursBear** 9 months, 3 weeks ago

Office for Web has the Targeted Release option. Here we are to assume it's about the Web version and not desktop

upvoted 1 times

☐ 👤 **LadyTee** 3 years, 10 months ago

Standard Release is still as soon as possible: As MS Admin, you WANT to complete the diligence prior to installing any new features on an employee's computer. See Target Release benefits: https://docs.microsoft.com/en-us/microsoft-365/admin/manage/release-options-in-office-365?view=o365-worldwide#benefits-of-targeted-release

upvoted 3 times

☐ 👤 **Pastasaus** 5 years ago

If you see on this page, the targeted release is the one that gives the correct answer.

https://docs.microsoft.com/en-us/office365/admin/manage/release-options-in-office-365?view=o365-worldwide

upvoted 2 times

☐ 👤 **michael365** 5 years ago

Should the answer to this question not be standard release? As this means the user will get the update as soon as it has reached standard release?

upvoted 3 times

☐ 👤 **GMAzure** 3 years, 1 month ago

My interpretation of the question would be the same

upvoted 1 times

☐ 👤 **Faulu** 4 years, 11 months ago

The standard release refers to a product that has been tested and ready for everyone. Targeted comes before that for mainly testing purposes by those who opt in

upvoted 3 times

☐ 👤 **josephdonalds** 5 years ago

you want asap, with targeted you can receive insider wich includes the newest features.

DRAG DROP -

You are a member of a Microsoft Office 365 group named Sales. You create a proposal for a customer by using Word Online.

All team members must be able to review and make changes to the proposal at the same time. After the proposal is completed, you must share the final document with the customer in read-only format.

You need to ensure that the customer sees the most recent versions of the document.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Select and Place:

Actions

Add the proposal to the Sales team site in SharePoint Online.

Create a sharing link to the proposal with read-only access.

Add the proposal to OnDrive for Business.

Email the customer and include the proposal as an attachement.

Email the customer and include the link to the document.

Steps

Suggested Answer:

Actions

Add the proposal to the Sales team site in SharePoint Online.

Create a sharing link to the proposal with read-only access.

Add the proposal to OnDrive for Business.

Email the customer and include the proposal as an attachement.

Email the customer and include the link to the document.

Steps

Add the proposal to the Sales team site in SharePoint Online.

Create a sharing link to the proposal with read-only access.

Email the customer and include the link to the document.

☐ 👤 **oxaytol** `Highly Voted 👍` 3 years, 9 months ago

Hello guys. Options should be:

1. Add the doc to sharepoint (Since you need team members to work on it, this is the right way to do it. You could also do it with onedrive, but this requires additional set up in order to share the info with the team members)

2. Create a link with read only properties, since you don't want the customer to edit the document.

3. Send the customer THE LINK (if you send the document, you are sending an editable copy of the document in SPO. By sending the link, you ensure that the customer access to the document with the proper read only rights that you have configured in your SPO environment)

Regards!

The third has to send the link. Why else would you create a link to not share it. As well as what attachment are you sending?
upvoted 2 times

⊟ 👤 **Edward2086** 3 years, 8 months ago
great. they already corrected, the current answers are correct
upvoted 1 times

⊟ 👤 **Gerardo1971** 3 years, 9 months ago
Third is send the customer a link.
upvoted 1 times

⊟ 👤 **TMW** 3 years, 9 months ago
1 - add the doc to sharepoint
2 - create a link, read only
3 - send the customer a link
This is a cloud solution, no need to include the attachment, you send the customer to a link, they download/review the document.
upvoted 6 times

⊟ 👤 **Rezerestibeiro27** 3 years, 9 months ago
Totally agree..
But from the exam point of view what should we select "attachment" or "link"?
upvoted 1 times

Hebbo7 3 years, 8 months ago

correct - shared link with read only will allow customer to receive latest update version - attachment will miss any further update..

what's a point of create link with read only and send attachment!!!!!!!

upvoted 3 times

---

gogok 3 years, 9 months ago

I believe the 3rd answer should be: email link.

This way customer will get the latest version of document. No need to have license to open it. Additionally in Admin Center->manage site collection-> allow external users.

As this question does not say: answer represent complete solution

upvoted 1 times

MarcyBeans 3 years, 9 months ago

why wouldn't you sent the read-only link instead of the document as an attachment? what's the point of the link then?

upvoted 4 times

DRAG DROP -

You are the Microsoft 365 administrator for a company.

You need to identify the different features of MyAnalytics and Workspace Analytics.

What are the different features? To answer, drag the appropriate applications to the correct features. Each application may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Select and Place:

Answer Area

Applications	Feature	Application
MyAnalytics	Included in office 365 E5 license	Application
Workspace Analytics	Can be purchased only as an add-on license	Application
	Provides employee work and collaboration metrics	Application
	Permits upload of custom organizational data	Application
	Provides team work and collaboration metrics	Application

Suggested Answer:

Your company is evaluating the differences between deployments of Office 365 ProPlus and Office 2016.

You need to determine the installation features of each deployment.

Which installation feature is unique to Office 365 ProPlus?

   A. Installation can be completed by using Click-to-Run.

   B. Installation can be completed by using System Center Configuration Manager.

   C. Installation is available in both 32-bit and 64-bit versions.

   D. Installation is on the user's local computer.

Suggested Answer: *A*

Community vote distribution

A (100%)

👤 **JayLearn2022** `Highly Voted 👍` 1 year, 9 months ago

Answer: A. Installation can be completed by using Click-to-Run.

Click-to-Run is a streaming and virtualization technology that allows Office ProPlus to be delivered and updated from the cloud, rather than installing the full application on the user's computer. This enables faster and more efficient deployment and updates of the software. In contrast, Office 2016 is typically installed via traditional installation methods, such as downloading an installer file or using System Center Configuration Manager.

Proplus is now named Microsoft 365 apps for Enterprise: https://docs.microsoft.com/en-us/deployoffice/about-microsoft-365-apps

upvoted 5 times

👤 **Du_MS900** `Most Recent ⊘` 9 months, 2 weeks ago

O Click-to-Run é uma tecnologia de instalação usada pela Microsoft para implementar o Microsoft Office, incluindo o Office 365 ProPlus. Ao contrário das instalações tradicionais baseadas em MSI (Microsoft Installer), o Click-to-Run é projetado para ser mais eficiente, flexível e fácil de gerenciar. Aqui está uma visão geral de como o Click-to-Run funciona:

upvoted 1 times

👤 **ExamNiq** 1 year, 10 months ago

Office click to run was available with Office 2013 (OEM) so A cannot be right.

   👤 **Mzi_8** 1 year, 11 months ago

   Thanks

    upvoted 2 times

👤 **JayLearn2022** `Highly Voted 👍` 1 year, 9 months ago

MoMReturningUsers (Month over Month Returning Users) measures the number of unique users who have been active in the current month and were also active in the previous month. This metric provides a good indication of user engagement and retention over time.

EnabledUsers measures the number of licensed users who have access to Microsoft 365 services.

ActiveUsers measures the number of unique users who have interacted with a Microsoft 365 service during a given time period.

CumulativeActiveUsers measures the total number of unique users who have interacted with a Microsoft 365 service since the service was first deployed.

upvoted 5 times

👤 **Thankapp** `Most Recent ⊙` 7 months ago

I have no idea the difference between

CumulativeActiveUsers

and

MoMReturningUsers

upvoted 1 times

👤 **Du_MS900** 9 months, 2 weeks ago

Para acompanhar quantos usuários estão ativos hoje e também estavam ativos no mês passado, você deve usar a métrica:

A. MoM Retornando Usuários

Essa métrica ("Month-over-Month Returning Users" ou "Usuários que retornam de um mês para o outro") é específica para medir a taxa de adoção e engajamento ao longo do tempo, fornecendo informações sobre usuários ativos em períodos consecutivos, como o mês passado e o mês atual.

As outras métricas mencionadas não se concentram na comparação entre períodos consecutivos ou não são específicas para rastrear usuários ativos ao longo do tempo.

upvoted 3 times

You are a Microsoft 365 administrator for a company. You use products that are in private preview, public preview, or general availability (GA).

You need to determine at which phases you can receive support from the Microsoft 365 admin center.

For which product phase or phases can you receive support?

    A. GA, private preview, and public preview

    B. GA and private preview only

    C. GA only

    D. GA and public preview only

    E. public preview and private preview only

Suggested Answer: *D*

Support for Preview services and features is provided only for ג€Public Previewג€ programs. Azure Support plans do not cover non-Public Previews services.

Reference:

https://azure.microsoft.com/en-us/support/faq/

https://www.rmsource.com/blogsite/Pages/Microsoft-Azure---Public-Preview-Release-Status.aspx

Community vote distribution

C (61%)	D (39%)

Snowman1 `Highly Voted 👍` 5 years, 2 months ago

GA is correct.

This question explicitly mentions 'Microsoft 365 admin center', Public preview support is only available through Microsoft Customer Support Services.

upvoted 38 times

Silvia `Highly Voted 👍` 5 years, 2 months ago

I think it is GA only , as we need support from admin center. "You use the admin center to set up your organization in the cloud, manage users, manage subscriptions, etc" , it is not about a technical support that Ms offers for both GA and public, see one similar question, next one Q3 as well.

upvoted 21 times

Kariema `Most Recent ⊘` 2 months, 4 weeks ago

`Selected Answer: D`

Public Preview is supported my MS but is still in development

upvoted 1 times

RamaPutra 3 months, 1 week ago

`Selected Answer: D`

When working with features in public preview, these features:

1-May have restricted or limited functionality. For example, the feature may only apply to one platform.

2-Typically go through feature changes before they're generally available (GA).

3-Are fully supported by Microsoft.

Private preview is for evaluation purposes only. It might have other issues that were not yet discovered or fixed, except for the lack of SLA and formal support

Public preview "Are fully supported by Microsoft."

"Microsoft provides support for private preview features." https://learn.microsoft.com/en-us/microsoft-365/admin/manage/stay-on-top-of-updates?view=o365-worldwide article updated in 08.24.

I'm so confused..

upvoted 2 times

⊟ 👤 **Du_MS900** 1 year, 3 months ago

Normalmente, o suporte oficial do centro de administração do Microsoft 365 é fornecido apenas para produtos que atingiram a disponibilidade geral (GA). Portanto, a opção correta seria:

C. Somente GA

Isso significa que você receberá suporte para produtos que foram totalmente lançados e estão disponíveis para todos os usuários, não durante as fases de visualização privada ou visualização pública. As versões prévias geralmente têm suporte limitado e são destinadas a testes e feedback, enquanto o suporte completo é oferecido após o lançamento geral.

upvoted 1 times

upvoted 3 times

⊟ 👤 **momowagdy** 1 year, 10 months ago

https://vunvulear.medium.com/differences-between-ga-private-and-public-preview-on-azure-services-and-features-7ccdd42aa294

upvoted 1 times

⊟ 👤 **williamlamata** 1 year, 11 months ago

C. GA only.

The Microsoft 365 admin center provides support for products in the General Availability (GA) phase only. During the GA phase, the product is considered stable, feature-complete, and ready for production use. Microsoft provides comprehensive support and documentation for GA products through the admin center, including troubleshooting guides, knowledge base articles, and direct support channels.

upvoted 1 times

⊟ 👤 **[Removed]** 2 years, 1 month ago

Selected Answer: C

GA only

upvoted 2 times

neozed 2 years, 3 months ago

Selected Answer: C

The correct answer is C. GA only.

The Microsoft 365 admin center provides support for products that are generally available (GA) only. Private preview and public preview products are not yet generally available and are still in the testing phase, so they are not fully supported. However, Microsoft may provide limited support for private and public preview products through preview-specific channels, such as the Microsoft Tech Community.

upvoted 2 times

DigitalDevil 2 years, 3 months ago

Similar question on the Microsoft Learn sample questions page for MS-900, it's worded differently though it says customers with a valid Azure Subscription can get support for Public preview and GA (Question 18):

DRAG DROP -

You are the Microsoft 365 administrator for a company.

Which Microsoft 365 components should employees use?

Match each component to its task. To answer, drag the appropriate components from the column on the left to the tasks on the right. Each component may be used once, more than once, or not at all.

NOTE: Each correct match is worth one point.

Select and Place:

Answer Area

Components	Task	Component
Windows 10 Enterprise	Send an email to a distribution list.	
Microsoft Exchange Online	Author a document at the same time as someone else and use document versioning.	
Microsoft SharePoint Online	Hold a voice and video conversation with other employees.	
Microsoft Teams	Register a personal device with the company.	
Microsoft Enterprise Mobility + Security	View a personal calendar.	

Suggested Answer:

Answer Area

Components	Task	Component
Windows 10 Enterprise	Send an email to a distribution list.	Microsoft Exchange Online
Microsoft Exchange Online	Author a document at the same time as someone else and use document versioning.	Microsoft SharePoint Online
Microsoft SharePoint Online	Hold a voice and video conversation with other employees.	Microsoft Teams
Microsoft Teams	Register a personal device with the company.	Microsoft Enterprise Mobility + Security
Microsoft Enterprise Mobility + Security	View a personal calendar.	Microsoft Exchange Online

Mycalendar is part of Windows 10 ... so i believe the 5th is Windows 10

upvoted 12 times

   👤 **m_mohammadi** 1 year, 4 months ago

   Mycalendar is a third-party program that you can install form Microsoft Store

   https://apps.microsoft.com/detail/9WZDNCRDCR1W?launch=true&mode=full&hl=en-us&gl=us&ocid=bingstartsearch

   upvoted 1 times

👤 **TiagoTrop** `Highly Voted 👍` 4 years ago

It says "Personal Calendar" so I believe Windows 10 Enterprise as you don't need to share.

upvoted 5 times

👤 **sxcap** `Most Recent ⊘` 1 month, 3 weeks ago

Send emails: Exchange

Autor documents: sharepoint

Hold video conferences: Teams

Register devices: Enterprise Mobility

View PERSONAL calendar: OUTLOOK (you can add your own calendar in a separated PST), but EXCHANGE is not for that... right? anyway the closest option is Exchange...

Tricky question

upvoted 1 times

☐ 👤 **Kariema** 2 months, 4 weeks ago

Do questions like these come often in the exam? Where multiple answers are correct

upvoted 1 times

☐ 👤 **makamine** 8 months, 1 week ago

is correct

The question says "Which component of Microsoft 365".

*Windows 10 Enterprise is not part of it, but Exchange Online is.

upvoted 1 times

☐ 👤 **nathanzera** 2 years, 10 months ago

Calendar is an Exchange feature so 5 is Exchange.

upvoted 4 times

☐ 👤 **Allan79** 3 years, 3 months ago

Eu acredito que a ultima esta incorreta, por o Mycalendar é do Windows 10

upvoted 1 times

☐ 👤 **[Removed]** 3 years, 4 months ago

Current.

Note that Teams also can do this (should be correct also):

Author a document at the same time as someone else and use document versioning.

upvoted 2 times

☐ 👤 **Contactfornitish** 3 years, 3 months ago

Teams is a mix of muliple services supporting it from backend. Storing files in Teams is SHAREPOINT and Teams Calender coming from Exchange Online, Teams groups coming from O365.

NOT Teams specific feature

upvoted 3 times

☐ 👤 **Saravana12g** 3 years, 8 months ago

If you have Microsoft 365 or another email service based on Microsoft Exchange Online, use Outlook on the web to share your calendar with people inside or outside your organization.

https://support.microsoft.com/en-us/office/share-your-calendar-in-outlook-on-the-web-7ecef8ae-139c-40d9-bae2-a23977ee58d5

upvoted 1 times

☐ 👤 **syu31svc** 4 years ago

https://answers.microsoft.com/en-us/msoffice/forum/msoffice_o365admin-mso_teams-mso_o365b/cant-find-calendar-tab-in-the-teams-windows/01d607a7-2307-4bc2-812a-6481ede274a2

The above link would explain why viewing calendar is Exchange Online

upvoted 3 times

☐ 👤 **lammike** 4 years, 1 month ago

5th row: Teams can view personal calendar too, why must be Exchange Online?

upvoted 4 times

☐ 👤 **sirsmak** 4 years, 1 month ago

I think that is because, you need Exchange online to be able to view Calendars in Teams.

upvoted 6 times

DRAG DROP -

Your organization is considering subscribing to Microsoft 365.

You need to educate stakeholders about how Microsoft 365 components enable effective collaboration.

Match each Microsoft 365 service to the best service description. To answer, drag the appropriate services to the correct descriptions. Each service may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct match is worth one point.

Select and Place:

Services

- Microsoft Teams
- OneDrive for Business
- SharePoint Online
- Microsoft Yammer
- Office 365 ProPlus

Answer Area

Description	Service
A chat-based workspace that facilitates real-time collaboration and enables members of an organization to have conversations and create work plans.	Service
A cloud service that enables you to store and protect files, share files with others, access files from anywhere using an app or a web-browser, and restore all files to a previous date and time.	Service
A cloud service that enables you to store, organize, add third-party apps, access information from almost any device, allow sharing with external people by default, all by using a web-browser.	Service
A private social network that you can use to efficiently resolve support issues and gather feedback on projects and documents.	Service

Suggested Answer:

Services

- Office 365 ProPlus

Answer Area

Description	Service
A chat-based workspace that facilitates real-time collaboration and enables members of an organization to have conversations and create work plans.	Microsoft Teams
A cloud service that enables you to store and protect files, share files with others, access files from anywhere using an app or a web-browser, and restore all files to a previous date and time.	OneDrive for Business
A cloud service that enables you to store, organize, add third-party apps, access information from almost any device, allow sharing with external people by default, all by using a web-browser.	SharePoint Online

---

 MackD 1 year ago

This should be:

Teams

OneDrive for Business

Sharepoint Online

Yammer

Why?

The keyword here is "third-party apps". And not the word "you", that is definitely not the keyword. In both (2nd and 3rd option) descriptions the word "you" is mentioned. So that is really not a correct argument.

The following elaborates to add an app on Sharepoint.

https://support.microsoft.com/en-au/office/add-an-app-to-a-site-ef9c0dbd-7fe1-4715-a1b0-fe3bc81317cb

upvoted 2 times

 EricX 3 years, 2 months ago

Sharepoint is more powerful than OneDrive, it supports third-party apps.

upvoted 3 times

☐ 👤 **isokan** 3 years, 3 months ago

for me the second one could be sharepoint. isn't sharing files associated with shrepoint and not onedrive which is for personal files

upvoted 2 times

   ☐ 👤 **Irism** 1 year, 10 months ago

   YOU, is the keyword here, therefor OneDrive is the answer

   upvoted 2 times

   ☐ 👤 **C_Dog** 3 years, 3 months ago

   I think it's not SharePoint because it specifies using an App. And there isn't a dedicated SharePoint App.

   upvoted 5 times

      ☐ 👤 **CreateSiteCollection** 3 years ago

      Isn't it a SharePoint app? https://play.google.com/store/apps/details?id=com.microsoft.sharepoint

HOTSPOT -

You need to ensure that all users in your tenant have access to the earliest release of updates in Microsoft 365.

Which organizational release option should you use? To answer, select the appropriate options in the answer area.

Hot Area:

Answer Area

Use the [▼]

| Targeted release for entire organization |
| Standard release |
| Targeted release for select users |
| First release |

Suggested Answer:

Answer Area

Use the [▼]

| Targeted release for entire organization |
| Standard release |
| Targeted release for select users |
| First release |

Standard release is the default setting. It implements updates on final release rather than early release.

First release is now called Targeted release. Targeted release is the early release of updates for early feedback. You can choose to have individuals or the entire organization receive updates early.

"all users in your tenant have access "

Targeted release for entire organization is the answer

upvoted 9 times

☐ 👤 **Du_MS900** `Most Recent ⊙` 9 months, 2 weeks ago

A opção "Targeted Release for Entire Organization" no Microsoft 365 permite que todos os usuários de uma organização tenham acesso antecipado a novos recursos e atualizações antes do lançamento geral. Isso permite testar e avaliar as atualizações antes da implementação em toda a organização, garantindo que sejam estáveis e atendam às necessidades da empresa.

upvoted 2 times

☐ 👤 **Duddy_1983** 1 year, 9 months ago

I say targeted release selected userse. Because a company can be build up from more then one tenant, because it has other companies and have they could have their own tenants. So from logical standpoint, this should be "targeted selected useres".

upvoted 3 times

☐ 👤 **jeremyenciso23** 3 years, 8 months ago

Targeted release is correct (Y)

upvoted 2 times

DRAG DROP -

An organization is considering migrating resources to the cloud. The company does not plan to deploy Microsoft Azure ExpressRoute or site-to-site VPNs.

You need to identify which workloads you can migrate to the cloud.

Which workloads you can migrate to the cloud? To answer, drag the appropriate actions to the correct workloads. Each action may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Select and Place:

Answer Area

Actions	Workload	Action
Migrate to the cloud	You have a legacy application that requires connectivity with an on-premises data store.	Action
Remain on-premises	You need to deploy an external-facing website.	Action
	You need to deploy a Microsoft SharePoint collaboration site for partners.	Action

Suggested Answer:

Answer Area

Actions	Workload	Action
Migrate to the cloud	You have a legacy application that requires connectivity with an on-premises data store.	Remain on-premises
Remain on-premises	You need to deploy an external-facing website.	Migrate to the cloud
	You need to deploy a Microsoft SharePoint collaboration site for partners.	Migrate to the cloud

You are the desktop administrator for an organization.

You need to ensure that Office 365 ProPlus is installed on all employee computers.

Which three tools can you use to deploy Office 365 ProPlus? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

    A. Microsoft Intune

    B. System Center Operations Manager

    C. Windows Installer (MSI) package

    D. System Center Configuration Manager

    E. Office Deployment Tool

Suggested Answer: *ADE*

Microsoft Intune allows you to to deploy Office 365 ProPlus applications to Windows 10 devices from the cloud.

System Center Configuration Manager allows you to deploy Office 365 ProPlus to client computers from a local source, using your Configuration Manager distribution points.

The Office Deployment Tool (ODT) allows you to deploy Office 365 ProPlus to client computers from the Office Content Delivery Network (CDN) or from a shared folder on your network.

ADE is correct

upvoted 14 times

☐ 👤 **Du_MS900** `Most Recent ⊙` 9 months, 1 week ago

As três ferramentas que você pode usar para implantar o Office 365 ProPlus são:

A. Microsoft Intune

D. Gerenciador de configuração do System Center

E. Ferramenta de implantação do Office

upvoted 1 times

☐ 👤 **avijitghosh77** 2 years, 4 months ago

I didnot find Intune

https://docs.microsoft.com/en-us/DeployOffice/plan-microsoft-365-apps

Choose how you want to deploy:

Deploy from a local source with Configuration Manager: Manage your deployment with Configuration Manager, and download and deploy Office from distribution points on your network.

Deploy from the cloud with the Office Deployment Tool: Manage your deployment with the ODT, and install Office on client devices directly from the Office CDN.

Deploy from a local source with the Office Deployment Tool: Manage your deployment with the ODT, and download and deploy Office from a local source on your network.

Self-install from the cloud: Manage your deployment from the Office portal and have your users install Office on their client devices directly from the portal.

Snickers 3 years, 3 months ago
https://docs.microsoft.com/en-us/dynamics365/legal/supp-dynamics365-preview

"Previews are subject to reduced or different security, compliance and privacy commitments. Previews are not meant for production use, especially to process Personal Data or other data that is subject to heightened compliance requirements, and any use of "live" or production data is at your sole risk. Previews are not subject to any statements made on the Microsoft Trust Center."

The first one should be GA, not private preview
upvoted 1 times

Sleeping_cat 3 years, 3 months ago
Yes, but the Company supports aggressive rollout of features.
upvoted 2 times

A company has offices in multiple regions. The company has a Microsoft 365 subscription.

The company is developing a line-of-business (LOB) app. The app must meet the following requirements.

☞ Ensure availability regardless of an employee's location.

☞ Track the devices on which the app is installed by using Microsoft cloud services.

☞ Minimize costs.

What should you do?

    A. Copy the app to Microsoft OneDrive. Allow employees to download and install the app from One Drive.

    B. Deploy the app to all devices by using Microsoft Intune.

    C. Copy the app to local servers. Allow employees to download and install the app from the servers.

    D. Deploy the app to all devices by using group policy.

Suggested Answer: *B*

Reference:

https://docs.microsoft.com/en-us/mem/intune/apps/apps-windows-10-app-deploy https://docs.microsoft.com/en-us/mem/intune/apps/apps-monitor

Community vote distribution

B (100%)

👤 **thorntona02** `Highly Voted 👍` 4 years, 3 months ago

Option B: This is the only option that allows you to track the devices on which the app is installed on while ensuring the app is installed. This ticks all the boxes for the question.

I mean, you could share the app using OneDrive or other means but that will not ensure the install on the user's devices.

Microsoft Lifecycle Services (LCS) primarily provides support for Microsoft Dynamics 365 products, including Dynamics 365 Finance, Supply Chain Management, and other Dynamics 365 applications. It offers various services and tools to help customers manage the implementation, maintenance, and lifecycle of their Dynamics 365 solutions.

However, for Microsoft 365 products and features, including Office 365, Exchange Online, SharePoint Online, and Microsoft Teams, the primary resource for determining the lifecycle is indeed the Microsoft 365 Roadmap. The Microsoft 365 Roadmap provides visibility into the development, release, and retirement timelines for products and features within the Microsoft 365 suite. It offers comprehensive information about new features, updates, and changes across various Microsoft 365 services.

B. Microsoft Lifecycle Services

upvoted 3 times

---

williamlamata 1 year, 11 months ago

To determine the lifecycle of products and features in Microsoft 365, you should use:

B. Microsoft Lifecycle Services.

Microsoft Lifecycle Services (LCS) is specifically designed to provide information about the lifecycle of Microsoft products and services. It offers comprehensive details on product availability, support timelines, and end-of-life dates. LCS helps administrators and users stay informed about the different phases of a product's lifecycle, including mainstream support, extended support, and end of support.

https://learn.microsoft.com/en-us/lifecycle/products/ :D

A company plans to migrate to Microsoft 365. Corporate devices run Windows 7 or Windows 10.

You must upgrade all devices to use Office 365 ProPlus and minimize costs.

You need to standardize corporate device deployments.

Which three actions should you perform? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

  A. Implement Windows AutoPilot

  B. Deploy policies by using Configuration Manager

  C. Upgrade all devices to Windows 10

  D. Deploy policies by using Microsoft Intune

  E. Instruct users to download and install a Windows Installer package for Office 365 ProPlus

---

Suggested Answer: *ACD*

Community vote distribution

ACD (75%) | CDE (25%)
☐ 👤 **TMW** `Highly Voted 👍` 3 years, 9 months ago

This one is correct.

1 - implement Autopilot

2 - Windows 7 is no longer supported, so upgrade all to WIndows 10

3 - Deploy policies using Intune

The question says they are migrating to Microsoft 365, so that eliminates Configuration manager, ans B

Office 365 ProPlus does not use MSI packages, so that eliminates answer E

Leaving us with A,C,D

upvoted 59 times

  ☐ 👤 **uclacyc** 2 years, 1 month ago

  Your last statement is not totally correct. You can use ConfigMgr to deploy O365.

  https://www.prajwaldesai.com/deploy-office-365-proplus-using-sccm/

  Because the requirement is M365, ConfigMgr won't be used.

  upvoted 2 times

acd w7 does not support it, and standardized is posible trough intune (nOw MEM)

upvoted 1 times

☐ 👤 **Du_MS900** 9 months, 1 week ago

Para padronizar a migração para o Microsoft 365 e minimizar custos, é importante seguir estas etapas:

A. Implementar o Windows AutoPilot: O Windows AutoPilot simplifica a implantação de novos dispositivos Windows 10, permitindo configurações automáticas, incluindo a instalação do Office 365 ProPlus.

C. Atualizar todos os dispositivos para Windows 10: O Windows 10 é recomendado para aproveitar ao máximo os recursos do Microsoft 365, incluindo o Office 365 ProPlus, além de garantir segurança, visto que o Windows 7 não tem mais suporte.

D. Implantar políticas usando o Microsoft Intune: O Microsoft Intune permite gerenciar dispositivos de forma centralizada na nuvem, aplicando políticas de segurança e configuração, incluindo a implantação do Office 365 ProPlus de maneira controlada e padronizada.

upvoted 1 times

NoursBear 9 months, 3 weeks ago

I just got it why A was dodgy, Current W7 will be upgraded with Config Manager and we will presume W10 is at the correct build or they can also be updated with Config Mgr. Office will be installed through an intune policy add app. The Autopilot is to standardise future deployments, current computers just get an in place upgrade.

upvoted 2 times

williamlamata 1 year, 5 months ago

Selected Answer: ACD

To standardize corporate device deployments while migrating to Microsoft 365 and minimizing costs, you should:

Upgrade all devices to Windows 10: Windows 7 is no longer supported, and Windows 10 provides better integration with Office 365 ProPlus, ensuring compatibility and access to the latest features.

Implement Windows AutoPilot: Windows AutoPilot simplifies device deployment by automating setup and configuration processes, reducing manual intervention, and ensuring consistent deployment across devices.

Deploy policies using Microsoft Intune: Microsoft Intune is a cloud-based device management solution that allows for centralized policy enforcement. By deploying policies through Intune, you can standardize device configurations, security settings, and application deployments, ensuring consistency and reducing costs associated with manual configuration

HOTSPOT -

You are the Microsoft Office 365 administrator for a company.

The company has the following requirements:

☞ Users must be able to use incompatible applications on a Windows 10 device.

Cloud-based applications must use the same credentials as on-premises applications.

▪

☞ Users must be prevented from copying company data from managed applications installed on unmanaged devices.

You need to determine which technologies should be used for each requirement.

Which technologies should be used? To answer, select the appropriate options in the answer area.

Hot Area:

Answer Area

Requirement	Service
Users must be able to use incompatible applications on a Windows 10 device.	Windows Virtual Desktop Azure AD Application Proxy Azure AD Connect Microsoft Intune
Cloud-based applications must use the same credentials as on-premises applications.	Windows Virtual Desktop Azure AD Application Proxy Azure AD Connect Microsoft Intune
Users must be prevented from copying company data from managed applications installed on unmanaged devices.	Windows Virtual Desktop Azure AD Application Proxy Azure AD Connect Microsoft Intune

Answer Area

Requirement	Service
Users must be able to use incompatible applications on a Windows 10 device.	**Windows Virtual Desktop** / Azure AD Application Proxy / Azure AD Connect / Microsoft Intune
Cloud-based applications must use the same credentials as on-premises applications.	Windows Virtual Desktop / Azure AD Application Proxy / **Azure AD Connect** / Microsoft Intune
Users must be prevented from copying company data from managed applications installed on unmanaged devices.	Windows Virtual Desktop / Azure AD Application Proxy / Azure AD Connect / **Microsoft Intune**

upvoted 2 times

sabin001 1 year, 8 months ago

Yes, Microsoft Workspace Analytics can analyze network traffic patterns. Microsoft Workspace Analytics is a cloud-based service that provides insights into user productivity and collaboration within organizations. It can collect data from various sources, including network traffic, and provide reports and visualizations to help organizations optimize their use of Microsoft 365 services.

With Microsoft Workspace Analytics, organizations can gain visibility into how their users are using Microsoft 365 services, including network traffic patterns. By analyzing network traffic data, organizations can identify areas where network performance can be improved and optimize network configurations to improve user productivity.

However, it's important to note that Microsoft Workspace Analytics is designed to provide insights into the use of Microsoft 365 services, not to monitor or analyze all network traffic. For more comprehensive network traffic analysis, organizations may need to use specialized network monitoring tools.

upvoted 1 times

Answer is correct

upvoted 1 times

☐ 👤 **JayLearn2022** 1 year, 9 months ago

A. Use System Center Configuration Manager (SCCM) to deploy Office 365 ProPlus from a local distribution source: This is a common method for deploying software to multiple computers in an enterprise environment. SCCM can be used to deploy Office 365 ProPlus to computers on the company network.

D. Use the Office Deployment Tool (ODT) to download installation files to a local distribution source. Install Office 365 ProPlus by using the downloaded files: The Office Deployment Tool (ODT) is a command-line tool that allows administrators to download and deploy Office 365 ProPlus. This method provides more control over the installation process than the Office 365 portal method.

E. Enable users to download and install Office 365 ProPlus from the Office 365 portal: This method allows users to download and install Office 365

ProPlus directly from the Office 365 portal. This method is suitable for small organizations with fewer IT resources or organizations that allow users to work from home or remote locations.

upvoted 5 times

    ☐ 👤 **JayLearn2022** 1 year, 9 months ago

    Option B states to deploy Office 365 ProPlus from an Office Windows Installer (MSI) package using SCCM. However, Microsoft Office 365 ProPlus is not available as an MSI installer. It uses a Click-to-Run installer instead, which is a different technology.

    Option C states to download the Office 365 ProPlus Windows Installer (MSI) package and install it from a local distribution source. This is not possible since, as stated earlier, Microsoft Office 365 ProPlus does not use an MSI installer. Therefore, Option C is not a valid method to install Office 365 ProPlus.

If you do deploy with Configuration Manager, we recommend deploying from a local source, using your Configuration Manager distribution points.

For organizations that don't have Configuration Manager but still want to manage their deployment, we recommend using the Office Deployment Tool (ODT).

You can also manage your deployment from the Office portal and have your users install Office on their client devices directly from the portal.

Question #117

A company plans to deploy automated workflows for managers to approve.

You need to determine which Microsoft 365 products allow access to personal workflows.

Which two products should the managers use? Each correct answer presents a partial solution.

NOTE: Each correct selection is worth one point.

    A. Power Automate

    B. Microsoft Excel

    C. Yammer

    D. Microsoft Teams

Suggested Answer: *AD*

Power Automate is the new name for Microsoft Flow.

Reference:

https://flow.microsoft.com/en-us/blog/microsoft-flow-in-microsoft-teams/

---

syu31svc `Highly Voted 👍` 3 years, 6 months ago

B and C are 100% wrong for sure

upvoted 8 times

JayLearn2022 `Highly Voted 👍` 1 year, 9 months ago

The two products that allow access to personal workflows are:

A. Power Automate: This product provides a platform to create and manage workflows that can automate tasks across multiple applications and services in Microsoft 365. Managers can use Power Automate to access personal workflows and approve requests.

D. Microsoft Teams: This product provides a collaborative workspace for teams to work together and communicate. Managers can use Microsoft Teams to access personal workflows and approve requests.

Therefore, the correct answers are A. Power Automate and D. Microsoft Teams.

A company deploys Windows 10 to all devices.

Feature updates to Windows as a service must be installed as frequently as possible.

Which Windows 10 service channel installs updates most frequently?

    A. Windows Insider Program Servicing channel

    B. Long-term Servicing channel

    C. Semi-Annual Servicing channel

Suggested Answer: *A*

Reference:

https://docs.microsoft.com/en-us/windows/deployment/update/get-started-updates-channels-tools

Community vote distribution

A (93%)   7%

👤 **H3mn** `Highly Voted 👍` 2 years, 10 months ago

NO.....Windows Insider is not for normal users is just a test for IT admin or dept!! so the semi-annual update is the one with completely stable and secure one for productivity purposes

upvoted 12 times

    👤 **wando5000** 2 years, 4 months ago

    They seem to have changed it to annual (instead of semi annual)

    "Feature updates: Released annually. Feature updates add new features and functionality to Windows 10. Because they are delivered frequently (rather than every 3-5 years), they are easier to manage."

    upvoted 3 times

👤 **EPL_Fan** `Highly Voted 👍` 2 years, 5 months ago

`Selected Answer: A`

question is: Which Windows 10 service channel installs updates most frequently?

My answer is : A

Insider Program receives Feature Updates almost weekly, sometimes even multiple times a week. Other channels are limited to twice a year.

upvoted 11 times

👤 **[Removed]** `Most Recent ⊘` 8 months, 1 week ago

👤 **NoursBear** 9 months, 1 week ago

Although A is correct would you really set this channel in production ? Trick question ?

upvoted 1 times

👤 **SR1991** 1 year ago

`Selected Answer: A`

WIndows insider Program is the channel that get the most feature updates.

The Windows Insider Program is a community of millions of Windows' biggest fans who get to preview Windows features. While previewing Windows, Insiders can provide feedback and engage directly with Microsoft engineers to help shape the future of Windows.

Regardless if it is smart to set all your computers in the windows insider program, it is the channel that get the most feature updates.

upvoted 2 times

👤 **LP223** 2 years ago

This is purposefully trying to trick you. Semi-Annual Channel is only for Windows SERVER, not Windows 10 features. The only viable option is A since General Availability isnt there.

upvoted 7 times

👤 **MidasMuch86** 2 years, 2 months ago

I think the scenario provided before the actual question was just to throw off the test taker. The question was asked in general form on purpose so as the confirm the reader is paying attention.

C for me

upvoted 2 times

⊟ 👤 **bagzet** 2 years, 5 months ago

Since this is specific to Windows as a service, I believe the below is the most relevant.

From: Overview of Windows as a service
(https://docs.microsoft.com/en-us/windows/deployment/update/waas-overview)

"There are three servicing channels, each of which provides different levels of flexibility over when these updates are delivered to client computers. For more information, see Servicing channels.

There are currently three release channels for Windows clients:

The General Availability Channel receives feature updates as soon as they are available.
The Long-Term Servicing Channel, which is designed to be used only for specialized devices (which typically don't run Office) such as those that control medical equipment or ATM machines, receives new feature releases every two to three years.
The Windows Insider Program provides organizations with the opportunity to test and provide feedback on features that will be shipped in the next feature update."

C is not even an option, which makes me think it has to be A

upvoted 3 times

⊟ 👤 **wando5000** 2 years, 5 months ago

C está correta

upvoted 1 times

⊟ 👤 **Pandaguo** 3 years ago

A

Windows Insider

For many IT pros, gaining visibility into feature updates early--before they're available to the General Availability Channel — can be both intriguing and valuable for future end user communications as well as provide the means to test for any issues on the next General Availability release. Windows Insiders can consume and deploy preproduction code to their test machines, gaining early visibility into the next build. Testing the early builds helps both Microsoft and its customers because they have the opportunity to discover possible issues before the update is ever publicly available and can report it to Microsoft.

upvoted 2 times

⊟ 👤 **never4baby777** 3 years, 1 month ago

Answer C, for me
upvoted 1 times

□ 👤 **Saravana12g** 3 years, 1 month ago
Long-term Servicing Channel:
Specialized systems—such as devices that control medical equipment, point-of-sale systems, and ATMs—often require a longer servicing option because of their purpose. These devices typically perform a single important task and don't need feature updates as frequently as other devices in the organization.

Semi-Annual Servicing channel:
The Semi-Annual Channel receives feature updates twice per year.

Windows Insider:
For many IT pros, gaining visibility into feature updates early--before they're available to the Semi-Annual Channel — can be both intriguing and valuable for future end user communications as well as provide the means to test for any issues on the next General Availability release.
upvoted 2 times

Answer must be C.
upvoted 2 times

A company uses Microsoft 365.

The company wants to provide workflows of business tasks that connect to Microsoft Outlook and Microsoft Teams.

You need to choose a solution that meets the requirement.

Which solution should you choose?

    A. Power Automate

    B. Microsoft Bookings

    C. Microsoft Planner

    D. Power BI

Suggested Answer: *A*

Community vote distribution

A (100%)

☐ 👤 **syu31svc** `Highly Voted 👍` 3 years, 6 months ago

https://flow.microsoft.com/en-us/:

"Connect workflows to hundreds of data sources using a library of connectors and Microsoft Dataverse"

You'll find Teams and Outlook so answer is A

upvoted 1 times

☐ 👤 **JayLearn2022** 1 year, 9 months ago

The solution that meets the requirement is A. Power Automate.

Power Automate (formerly known as Microsoft Flow) is a cloud-based service that allows users to create automated workflows between different apps and services, including Microsoft Outlook and Microsoft Teams. With Power Automate, users can create workflows that automatically trigger actions in response to specific events, such as sending an email when a new task is added to Microsoft Planner or posting a message to a Teams channel when a new email is received in Outlook.

upvoted 2 times

    ☐ 👤 **JayLearn2022** 1 year, 9 months ago

    Microsoft Bookings is an app that allows users to create and manage appointment bookings,

    Microsoft Planner is a task management tool that allows users to create and track tasks.

    Power BI is a business analytics service that allows users to visualize and analyze data from a variety of sources.

    While these tools may be useful in a Microsoft 365 environment, they do not provide the specific functionality of creating workflows that connect to Microsoft Outlook and Microsoft Teams like Power Automate does.

👤 **Sheduic7720** `Highly Voted 👍` 3 years, 2 months ago

Bookings provides your business a unique web page that your customers can use to schedule appointments, even when you're not around to pick up the phone or respond to an email. The web page is simple to use: the customer first selects the service they want and, based on availability you provide, chooses a day and time when you or one of your staff is available, enters their contact information and books the appointment.

The web page looks great on both larger screens and mobile devices. It's easy to link to your scheduling page from an email that you send to customers or from your business's website or Facebook page.

Answer is supported by the link provided

upvoted 4 times

You are the Microsoft 365 administrator for a company. You deploy Windows 10 to all devices by using Windows Autopilot.

You need to ensure that employees can install Microsoft Office 365 ProPlus on their devices.

What are two possible ways to achieve this goal? Each correct answer presents a part of a solution.

NOTE: Each correct selection is worth one point.

    A. Use the self-install option on the Office 365 dashboard

    B. Download and install the Office ProPlus Windows Installer (MSI) package

    C. Enable auto-deployment of Office 365 apps for all devices

    D. Update the Windows AutoPilot deployment profile to include the Office 365 apps

---

Suggested Answer: *AC*

Reference:

https://docs.microsoft.com/en-us/deployoffice/deploy-office-365-proplus-from-a-local-source https://docs.microsoft.com/en-us/microsoft-365/business/add-autopilot-devices-and-profile

A AND C IS CORECCT

upvoted 41 times

    👤 **Rooks** 4 years, 8 months ago

    Options are a bit vague. Options say deploying O365 apps but corporations may not deploy all apps.

    upvoted 2 times

👤 **MattyG** `Highly Voted 👍` 4 years, 5 months ago

Each correct answer presents a part of a solution. I think it's C and D. Enable it then update the policy. The question also states to ensure they have it. The self install option isn't the best for that.

upvoted 15 times

    👤 **uclacyc** 2 years, 1 month ago

    Windows 10 is already deployed. Autopilot is only in effect during the initial deployment. The answer cannot be D.

    upvoted 4 times

        👤 **kiik32** 9 months, 1 week ago

        no it says you deploy" so you can still chose to deploy apps trough autopilot

        upvoted 1 times

    👤 **amymay101** 4 years, 2 months ago

    I was going to say D but you do not set app deployment in a 'deployment profile' its configured in ESP, so I guess its A and C

    upvoted 5 times

        👤 **benr98** 4 years ago

        but you can set there as auto deployment or user driven.. i think C compliments D

        upvoted 1 times

            👤 **maxustermann** 2 years, 10 months ago

            No, for installing apps via autopilot/ Intune you need to create a app in Endpoint center, in deployment profile you do not select which apps should be installed!

            upvoted 3 times

    👤 **benr98** 4 years ago

    I think this is correct too. C and D. Auto deployment may be set at Deployment profile page.

    upvoted 1 times

👤 **kiik32** `Most Recent ⏱` 9 months, 1 week ago

`Selected Answer: AC`

I guess D is not right because, autopilot is not in charge o deploying apps, once the initial set up si done it is MEM (intune) that deploys it

upvoted 1 times

alessandro2039 9 months, 2 weeks ago

Selected Answer: AC

It has to be AC because autopilot doesnt manage applications. But the answer for C or question itself should have mention of configuration manager or intune or something. Now we are just making assumptions on what this company can do based on little information. These questions are so dumb sometimes.

upvoted 3 times

NoursBear 9 months, 3 weeks ago

I don't know the option auto deployment for Office but on the other hand, updating the autopilot profile does not allow to add apps, you would need to have a policy with the app deployed and assigned and then an ESP page configured to wait for it to be installed or a provisioning package could be used with white glove. Another strange one

upvoted 1 times

ishmeeeeet 12 months ago

A and D (there isn't a direct "auto-deployment" feature for Office 365 apps tied to Autopilot in the same way as updating the Autopilot deployment profile itself to include the Office 365 apps.)

upvoted 1 times

jburgosargentina 1 year, 3 months ago

C & D

Use the self-install option on the Office 365 dashboard: While users can download and install Office from the Office 365 portal/dashboard, this is not a method associated with Windows Autopilot deployment.

upvoted 1 times

[Removed] 1 year, 7 months ago

Selected Answer: AD

a and d

upvoted 2 times

JayLearn2022 1 year, 9 months ago

This is a bad question. It does not have the correct answers.

We are left selecting A and C but C is not a valid Answer.

D would be correct if the Autopilot was configured to deploy the Apps during creation of the Windows 10 Instance's but the question states the user must install the Apps. Meaning the Windows 10 instances are already deployed.

You could use Intune or SCCM to deploy the apps automatically but those answers are not here.

upvoted 2 times

ExamNiq 1 year, 10 months ago

'Enable auto-deployment of Office 365 apps for all devices' never heard of this one? where to find it?

upvoted 2 times

uclacyc 2 years, 1 month ago

Selected Answer: AC

Office 365 ProPlus doesn't use MSIs. The answer cannot be B.

Windows 10 is already deployed. Autopilot is only in effect during the initial deployment. The answer cannot be D.

upvoted 1 times

upvoted 1 times

☐ 👤 **JayLearn2022** 1 year, 9 months ago

D. Dynamics 365

Dynamics 365 is a suite of cloud-based business applications from Microsoft that includes CRM, ERP, and AI tools. The CRM module of Dynamics 365 provides advanced capabilities for managing customer relationships, including sales automation, marketing automation, customer service, and field service. The ERP module provides tools for managing financials, supply chain, manufacturing, and other business processes.

Dynamics 365 also includes AI tools such as Microsoft Power BI for business intelligence and analytics, Microsoft PowerApps for custom app development, and Microsoft Flow for workflow automation. These tools can be used to enhance the functionality and capabilities of the CRM and ERP modules, providing a more comprehensive and integrated solution for managing customer relationships and business operations.

upvoted 3 times

    ☐ 👤 **JayLearn2022** 1 year, 9 months ago

    While SharePoint Online and Microsoft 365 are also cloud-based solutions from Microsoft, they are not specifically designed for CRM or ERP. Power Platform is a suite of low-code development tools that can be used to build custom apps and automate workflows, but it does not include pre-built CRM or ERP functionality like Dynamics 365 does.

https://azure.microsoft.com/en-us/services/virtual-desktop/

Answer is D

  upvoted 5 times

☐ 👤 **JayLearn2022** `Most Recent ⊘` 9 months ago

The solution that meets the requirement of enabling employees to access custom applications from their personal laptops while working from home is D. Windows Virtual Desktop.

Windows Virtual Desktop allows users to access a virtual desktop environment hosted in the cloud, which includes the custom applications they need to work with. This ensures that employees can work remotely without needing to install custom applications on their personal laptops, which can pose security risks.

The other options listed (Microsoft Access, Power Virtual Agent, Microsoft Remote Assist, and Microsoft Teams) do not provide the same level of access to custom applications as Windows Virtual Desktop.

We recommend Current Channel, because it provides your users with the newest Office features as soon as they're ready. If you need additional predictability of when these new Office features are released each month, we recommend Monthly Enterprise Channel. In those cases where you've select devices that require extensive testing before receiving new features, we recommend Semi-Annual Enterprise Channel.

DRAG DROP -

A company plans to migrate from a Microsoft volume licensing model to a subscription-based model.

Updates to devices must meet the following requirements:

Team	Requirement
Engineering	Application and operating system updates to laptop computers and mobile phones must start from an on-premises server.
Sales	Laptop computers and mobile phones must be updated periodically and not require an on-premises server.
Finance	Laptop computers and mobile phones must be updated periodically and monitored by using a single system.
Developers	Choose when updates are installed.

You need to recommend the appropriate servicing models to update employee laptop computers and mobile phones.

Which servicing models should you recommend? To answer, drag the appropriate servicing models to the correct teams. Each servicing model may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Select and Place:

Answer Area

Servicing models		Team	Servicing model
Windows Update (stand-alone)		Engineering	
Windows Update for Business		Sales	
Windows Server Update Services		Finance	
System Center Configuration Manager		App developers	

Suggested Answer:

Answer Area

Servicing models		Team	Servicing model
Windows Update (stand-alone)		Engineering	Windows Server Update Services
Windows Update for Business		Sales	Windows Update for Business
Windows Server Update Services		Finance	System Center Configuration Manager
System Center Configuration Manager		App developers	Windows Update (stand-alone)

For the app developers to decide when the updates are installed, they would have to use Windows Update (stand-alone). With WSUS, WUB or SCCM, the system administrator configures when the updates are installed. Windows Update is the only option that allows the user to decide when the updates are installed.

Reference:

https://docs.microsoft.com/en-us/windows/deployment/update/waas-overview#servicing-tools

  syu31svc `Highly Voted` 3 years, 6 months ago

Answer given is correct

Engineering team to work with on-premises server so use Windows Server Update Services
Sales to update without on-premises so use Windows Update for Business ("In addition to being able to use Group Policy to manage Windows Update for Business, either option can be configured without requiring any on-premises infrastructure by using Intune." from the link)
Finance to have monitoring so use Configuration Manager
Developer to choose when to update so use Windows Update (stand-alone) ("with IT pros manually configuring the device to be in the Semi-Annual Channel" from the link)

upvoted 12 times

👤 **NoursBear** `Most Recent ⊙` 9 months, 3 weeks ago

Surel for Engineering 2 solutions are required,

upvoted 1 times

👤 **MPT16** 2 years, 8 months ago

Answer is correct, the trick here is that Financial area needs to be monitored by a single system.

upvoted 3 times

👤 **Contactfornitish** 2 years, 9 months ago

It's not possible to register or update mobile phones in any of the solution except SCCM. Period

Finance and engineering go to SCCM
Developer can use stand alone
Sales can use WUB though putting mobile phones there is terrible question

upvoted 2 times

👤 **Ulus** 3 years ago

The explanation given...stating that Windows Update allows users to decide when update takes place is not true..It allows to defer for 30 days..thats all. Whereas Windows update for business allows to defer for up to 365 days. WSUS en MECM allow users to approve with the update. So...I dont know the correct answer to be frankly

upvoted 2 times

👤 **RNG60FR** 3 years, 4 months ago

Engineering specify "computers and mobile phones". --> Windows Server Update Services is not able to manage mobile phones. So I think the correct answer is SCCM.

upvoted 4 times

Dynamics 365 has an integrated customer relationship management (CRM) application that uses Microsoft 365 Apps.	○	○

Suggested Answer:

Answer Area

	Yes	No
Dynamics 365 is an infrastructure as a service (IaaS) solution.	○	○
A Microsoft 365 subscription includes a free subscription to Dynamics 365.	○	○
Dynamics 365 has an integrated customer relationship management (CRM) application that uses Microsoft 365 Apps.	○	○

Box 1: No -

Dynamics 365 is SaaS -

Box 2: No -
Dynamics 365 is not part of Microsoft 365

Box 3: No -
A connector can be used to connect to Dynamics 365 data but Dynamics 365 does not have Microsoft 365 apps.
Reference:
https://docs.microsoft.com/en-us/dynamics365/get-started/developers

👤 **Karyo** `Highly Voted 👍` 2 years, 1 month ago

No, it is SaaS

No it does not, D365 is seperate

Yes, you can integrate CRM with sharepoint etc

upvoted 8 times

  👤 **uclacyc** 2 years, 1 month ago

  Sharepoint isn't a M365 app. Also, Dynamics 365 doesn't need any of the M365 apps to work.

  upvoted 2 times

    👤 **Karyo** 2 years, 1 month ago

    SharePoint is definitely a M365 app.

    upvoted 8 times

  👤 **ExamNiq** 1 year, 10 months ago

(except for the IAAS question ofcourse :))

upvoted 3 times

👤 **NoursBear** `Most Recent ☉` 9 months, 3 weeks ago

For the third box, is it possible we are not understanding it correctly ? If we refer to the answer given, I wonder

upvoted 2 times

👤 **Sergio_G_S** 6 months, 1 week ago

maybe the key is

that Dynamics 365 CRM does not depend on Microsoft 365 applications for its operation. However, it integrates with Microsoft 365 apps like Outlook, Excel, Teams, and SharePoint to provide enhanced functionality and a smoother experience for users. Therefore the answer to the third statement is NO.

upvoted 1 times

👤 **BhavyaSangam** 1 year, 4 months ago

Selected Answer: D

Microsoft Teams is correct answer

upvoted 2 times

 ExamNiq 1 year, 10 months ago

Well ok MS, you can almost answer therefore these questions with 'Teams' as you can almost load any app from within Teams. There is a standalone 'Microsoft Whiteboard' app. But ok, accessing it from Teams, a bit far fetched but ok . it's the best answer then but I think it's not the primary entry point for the Whiteboard app.

A company uses Microsoft 365.

The company wants to automate an approval process for invoices by using Microsoft Teams.

You need to identify the solution to create the workflow.

Which three solutions can achieve the goal? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

    A. Power Automate

    B. Power Virtual Agents

    C. Power BI

    D. Microsoft Forms

    E. Power Apps

Suggested Answer: *ABE*

Reference:

https://www.linkedin.com/pulse/step-by-step-guide-create-approval-automation-flow-new-michel-bouman

Community vote distribution

ADE (61%)	ABE (26%)	13%

👤 **JayLearn2022** `Highly Voted 👍` 1 year, 9 months ago

Answer: ABE

Power Automate can be used to create a workflow that triggers when an invoice is uploaded to a specific SharePoint folder. The workflow can then send a notification to the approver in Microsoft Teams, allowing them to review and approve the invoice directly from Teams.

Power Apps can be used to create a custom app that allows users to upload and submit invoices for approval. When an invoice is submitted, a notification can be sent to the approver in Microsoft Teams, where they can review and approve the invoice.

Power Virtual Agents can be used to create a chatbot that handles invoice approvals by integrating it with Microsoft Teams. When an invoice is submitted, the chatbot can initiate a conversation with the approver in Teams, guiding them through the approval process and capturing their response.

upvoted 11 times

   👤 **JayLearn2022** 1 year, 9 months ago

   Power BI and Microsoft Forms are not appropriate solutions for automating an approval process for invoices in Microsoft Teams. Power BI is a business intelligence tool used for data visualization and analysis, while Microsoft Forms is a survey tool used to collect information from users.

   Microsoft Forms is not an appropriate solution to automate an approval process for invoices by using Microsoft Teams in Microsoft 365. Microsoft Forms is a survey tool that is used to collect information from users through quizzes, surveys, polls, and questionnaires. While it can be used to collect invoice data, it is not designed to manage or automate invoice approvals. For invoice approvals, it would be better to use a tool that is specifically designed for workflow automation, such as Power Automate or Power Apps.

`Selected Answer: ADE`

A,D,E is correct

upvoted 1 times

👤 **vncnt311** 5 months ago

`Selected Answer: ADE`

The three correct solutions to automate an invoice approval process in Microsoft Teams are:

✅ A. Power Automate – (Correct)

Power Automate is designed for workflow automation, including approval processes.

It integrates with Teams, SharePoint, and other Microsoft 365 apps to send approval requests and notifications.

✅ D. Microsoft Forms – (Correct)

Microsoft Forms can be used to collect invoice submission details.

It can trigger a workflow in Power Automate to start the approval process.

✅ E. Power Apps – (Correct)

Power Apps can be used to create a custom invoice submission and approval app.

It integrates with Teams and Power Automate to manage approvals efficiently.

Incorrect Answers:

✖ B. Power Virtual Agents – (Incorrect)

This is a chatbot solution, not primarily for automating invoice approvals.

✖ C. Power BI – (Incorrect)

Power BI is used for data visualization and reporting, not workflow automation.

A company uses Microsoft 365 Analytics.

The company wants employees to complete top priority work by:

☞ Scheduling up to two hours every day to spend on top priority work.

☞ Silencing chats in Microsoft Teams during this time.

Which feature should you use?

    A. Focus plans

    B. Work patterns

    C. Digests

    D. Habit playbooks

    E. Insights add-ins

Suggested Answer: *A*

Answer: A Focus Plan

Focus plans would be the appropriate feature to use in this scenario. Focus plans in Microsoft 365 Analytics help users prioritize and manage their time by scheduling periods of uninterrupted focus time, and silencing chat notifications during those periods to minimize distractions. Users can choose when to schedule their focus time and how long they want it to last. This can help them to concentrate on important tasks and increase their productivity

Answer is correct, this was in my exam

upvoted 1 times

☐ 👤 **JayLearn2022** 1 year, 3 months ago

The correct product to select for this scenario is B. Microsoft Teams.

Microsoft Teams is a collaboration platform in Microsoft 365 that enables users to create teams and channels, and share documents, tasks, and conversations with internal and external users. It provides a centralized location for team collaboration and communication, and supports real-time collaboration with features such as co-authoring and screen sharing.

upvoted 1 times

   ☐ 👤 **JayLearn2022** 1 year, 3 months ago

Outlook 365 is primarily an email client in Microsoft 365, although it does provide some limited collaboration features such as shared calendars and tasks. It is not designed as a full-fledged collaboration platform like Microsoft Teams.

Microsoft OneDrive is a cloud storage service in Microsoft 365 that enables users to store and share files securely. While it does support collaboration features such as co-authoring and version control, it is not designed as a collaboration platform like Microsoft Teams.

Exchange Online is primarily an email and calendar service in Microsoft 365, although it does provide some limited collaboration features such as shared calendars and contacts. It is not designed as a full-fledged collaboration platform like Microsoft Teams.

A Microsoft 365 group is created when you create a SharePoint Team Site

upvoted 1 times

☐ 👤 **wando5000** 1 year, 3 months ago

Parts 2 & 3 look correct;

If Microsoft 365 Groups is enabled, when you create a team site, a Microsoft 365 Group is automatically created. Any users you add to your team site are automatically added to your Microsoft 365 Group. Similarly, when you create a Microsoft 365 Group in Outlook, a SharePoint in Microsoft 365 team site is automatically created and any users you add to your Microsoft 365 Group get added to the team site.

All members of the Microsoft 365 Group have access to the team site and all members of the team site have access to the Microsoft 365 Group. Members can add additional document libraries, lists, and web apps as needed.

upvoted 5 times

👤 **JayLearn2022** `Most Recent ⊘` 9 months ago

If Excel is not an option,

OneNote allows users to create multiple notebooks, each with its own sections and pages. You can create a separate notebook for each project, and then create a new page for each travel reservation or itinerary within the appropriate notebook.

Within each page, you can use OneNote's formatting capabilities to organize and track the necessary information, such as flight details, hotel reservations, and rental car information. You can also add tags, links, and attachments to each page as needed.

OneNote also provides the ability to share notebooks with team members, which can be helpful for collaboration and tracking project-related information.

While OneNote may not provide the same level of data management and tracking capabilities as Excel, it can still be an effective solution for tracking travel reservations and itineraries for multiple projects in a single file.

You are an IT director that is evaluating the capabilities of Microsoft Viva Insights.

You need to describe the capabilities to the key stakeholders.

Which three capacities describe Viva Insights? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

A. Viva Insights integrates directly with Microsoft Yammer.

B. You can add Viva Insights as an app in Microsoft Teams.

C. Microsoft Outlook includes an add-in for Viva Insights.

D. A web-based dashboard is available for Viva Insights.

E. Insights integrates directly with Microsoft Bookings.

Suggested Answer: *ABC*

How does Yammer fit into Microsoft Viva?

Just as within Microsoft 365, Yammer contributes much of the content, connections, and conversations within Microsoft Viva. Currently, this includes Viva Topics and Viva Connections.

The Microsoft Viva Insights app in Microsoft Teams shows you personalized recommendations that help you do your best work.

Open the Viva Insights Outlook add-in by selecting the Viva Insights icon on the Outlook Home ribbon. If you are using Outlook on the web, open an email message, select the ellipsis (...) in the top-right corner of your email message, and then select Viva Insights.

All given answer are correct

upvoted 3 times

☐ 👤 **dlwPieter** 4 months, 3 weeks ago

I agree!

Through the Microsoft 365 admin center: Go to Settings > Integrated Apps.

Search for the Report Message add-in and deploy it to your users.

Using Microsoft Intune: Create an app policy in Microsoft Intune to deploy the add-in to managed devices.

Using Configuration Manager: Deploy the add-in through Configuration Manager if you are managing devices with this tool.

A company is evaluating Microsoft 365 Apps.

The company needs to track all travel reservations and itineraries for its team members by project in a single file. Each project must have its own tab.

You need to recommend the correct solution for the company.

Which solution should you recommend?

    A. Microsoft Access

    B. Microsoft OneNote

    C. Microsoft Word

    D. Microsoft OneDrive

    E. Microsoft Publisher

Suggested Answer: *B*

With OneNote, you can easily keep everything you need for your trip, organized and with you. Create sections for different needs such as brainstorming, travel notes, itineraries, and more.

Selected Answer: B

one note

Microsoft OneNote is a note-taking and organization tool that allows you to create digital notebooks with multiple sections and pages. Each project can be represented as a separate section in OneNote, and within each section, you can create multiple pages to track travel reservations and itineraries specific to that project. OneNote provides a flexible and collaborative environment for organizing and managing information, making it a suitable choice for this scenario.

Strange reply, oneNote doesn't manage "files"...

upvoted 1 times

TheConsultant5517 2 years, 8 months ago

While it does not manage files, a onenote workbook is essentially a single file. So the answer is not wrong there. In practice though recommending to manage such information in onenote is highly unorthodox.

upvoted 2 times

HOTSPOT -

A company is creating their Windows as a service (WaaS) strategy.

You need to determine which type of release should be used.

Select the answer that correctly completes the sentence.

Hot Area:

The company will validate quality updates in an early release prior to a combined security release through

B releases
Non-security releases
C releases
Out-of-band (OOB) releases

Suggested Answer:

The company will validate quality updates in an early release prior to a combined security release through

B releases
Non-security releases
C releases
Out-of-band (OOB) releases

IT admins have the option to test and validate production-quality releases ahead of the planned B release for the following month. These updates are optional, cumulative, non-security preview releases known as C releases. These releases are only offered to the most recent, supported versions of Windows.

Incorrect:

* Non-security releases

Quality updates -

Quality updates are provided on a monthly schedule, as two types of releases:

1. Non-security releases

2. Combined security + non-security releases

Non-security releases provide IT admins an opportunity for early validation of that content prior to the combined release. Releases can also be provided outside of the monthly schedule when there is an exceptional need.

* OOB releases

Out-of-band (OOB) releases might be provided to fix a recently identified issue or vulnerability. They are used in atypical cases when an issue is detected and cannot wait for the next monthly release, because devices must be updated immediately to address security vulnerabilities or to resolve a quality issue impacting many devices.

* B releases

Most people are familiar with what is commonly referred to as Patch Tuesday or Update Tuesday.Ɪ€‰These updates are released on the second Tuesday of each month, and are known as theꞮ€‰B release (where Ɪ€BꞮ€Ɪ€‰refers to the second week in the month). B releases are typically published at 10:00 AM Pacific Time (PST/

PDT).

Because they are cumulative, B releases include both new and previously released security fixes, along with non-security content introduced in the prior month's

Preview C release (see the next section). These updates help keep Windows devices secure and compliant by deploying stability fixes and addressing security vulnerabilities. B releases are mandatory.

A company is evaluating Microsoft 365.

You need to describe the features of Microsoft Bookings.

What are two features of Microsoft Bookings? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

    A. Uses Microsoft Teams for virtual meetings.

    B. Provides SMS notification for appointments.

    C. Uses Yammer for virtual meetings.

    D. Provides phone call notification for appointments.

Suggested Answer: *AB*

Bookings in Microsoft Teams lets you track, manage, and organize your team's appointments and calendars all in one place. You can create a Bookings calendar and add team members to it, build new appointment types, and create and manage in-person and virtual visits for your staff and attendees.

Schedule appointments - Select New appointment, choose an appointment type, and make it a Teams meeting or an in-person one.

With Microsoft Bookings, you can set up SMS text notifications to be sent to the person booking an appointment.

Reference:

https://support.microsoft.com/en-us/office/what-is-bookings-42d4e852-8e99-4d8f-9b70-d7fc93973cb5 https://docs.microsoft.com/en-us/microsoft-365/bookings/bookings-sms?view=o365-worldwide

`Selected Answer: AB`

Two features of Microsoft Bookings are:

A. Uses Microsoft Teams for virtual meetings.

Microsoft Bookings allows integration with Microsoft Teams to automatically generate Teams meeting links for online appointments. This makes it easy to conduct virtual consultations, classes, or other services.

B. Provides SMS notification for appointments.

Microsoft Bookings can send SMS text message reminders to customers about their upcoming appointments. This helps reduce no-shows and ensures customers don't miss their scheduled times.

HOTSPOT -

Instructions: For each of the following statement, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Hot Area:

Statements	Yes	No
Microsoft Endpoint Manager helps manage and monitor Android OS –based mobile devices.	○	○
Microsoft Endpoint Manager helps manage and monitor Windows 10 personal desktop computers.	○	○
Microsoft Endpoint Manager is used to manage company-owned devices only.	○	○

Suggested Answer:

Statements	Yes	No
Microsoft Endpoint Manager helps manage and monitor Android OS –based mobile devices.	○	○
Microsoft Endpoint Manager helps manage and monitor Windows 10 personal desktop computers.	○	○
Microsoft Endpoint Manager is used to manage company-owned devices only.	○	○

Box 1: Yes -

You can manage Android devices in Microsoft Intune.

Use the Microsoft Endpoint Manager admin center Dashboard to display overall details about the devices and client apps in your Intune tenant.

Dashboards provide a way for you to create a focused and organized view in the Microsoft Endpoint Manager admin center. Use dashboards as a workspace where you can quickly launch tasks for day-to-day operations and monitor resources.

Note: Microsoft Intune, which is a part of Microsoft Endpoint Manager, provides the cloud infrastructure, the cloud-based mobile device management (MDM), cloud-based mobile application management (MAM), and cloud-based PC management for your organization.

Box 2: Yes -

Microsoft intune is not just for mobile devices, it can be used for laptop and desktop management as well.

Box 3: No -

Microsoft Intune enables mobile device management for:

Personal devices, including personally owned phones, tablets, and PCs.

Corporate-owned devices, including phones, tablets, and PCs owned by your organization and distributed to employees and students for use at work or school.

☐ 👤 **BTL_Happy** 2 years, 2 months ago

Correct

DRAG DROP -

A company is using Microsoft cloud services.

You need to select the correct reports in the Microsoft 365 admin center.

Match each report to its definition. Each report may be used once, more than once, or not at all.

NOTE: Each correct match is worth one point.

Select and Place:

Reports

| Email activity |
| Mailbox usage |
| Email apps usage |
| Active users |

Answer Area

Definition	Report
Report that shows the number of meeting interactions by users.	
Report that shows the amount of storage used by users.	
Report that shows the number of unique users that use Outlook on the web.	

Suggested Answer:

Reports

| Email activity |
| Mailbox usage |
| Email apps usage |
| Active users |

Answer Area

Definition	Report
Report that shows the number of meeting interactions by users.	Email activity
Report that shows the amount of storage used by users.	Mailbox usage
Report that shows the number of unique users that use Outlook on the web.	Email apps usage

Box 1: Email activity -

The Activity chart enables you to understand the trend of the amount of email activity going on in your organization. You can understand the split of email send, email read, email received, meeting created, or meeting interacted activities.

Incorrect:

You can use the Active Users report to find out how many product licenses are being used by individuals in your organization, and drill down for information about which users are using what products. This report can help administrators identify underutilized products or users that might need additional training or information.

Box 2: Mailbox usage -

The Mailbox usage report provides information about users with a user mailbox and the level of activity by each based on the email send, read, create appointment, send meeting, accept meeting, decline meeting and cancel meeting activity. It also provides information about how much storage has been consumed by each user mailbox, and how many of them are approaching storage quotas.

Box 3: Email apps usage -

In the email apps usage report, you can see how many email apps are connecting to Exchange Online. You can also see the version information of Outlook apps that users are using, which will allow you to follow up with those who are using unsupported versions to install supported versions of Outlook.

Reference:

https://docs.microsoft.com/en-us/microsoft-365/admin/activity-reports/mailbox-usage?view=o365-worldwide https://docs.microsoft.com/en-us/microsoft-365/admin/activity-reports/email-apps-usage-ww?view=o365-worldwide

---

☐ 👤 **MackD** `Highly Voted 👍` 1 year ago

Email Activity:

https://learn.microsoft.com/en-us/microsoft-365/admin/activity-reports/email-activity-ww?view=o365-worldwide

Mailbox usage:

https://learn.microsoft.com/en-us/microsoft-365/admin/activity-reports/mailbox-usage?view=o365-worldwide

Email apps usage:

https://learn.microsoft.com/en-us/microsoft-365/admin/activity-reports/email-apps-usage-ww?view=o365-worldwide

Active Users:
https://learn.microsoft.com/en-us/microsoft-365/admin/activity-reports/active-users-ww?view=o365-worldwide

Based on the above official MS pages the answer is:

1. Email Activity. Why? "You can understand the split of email send, email read, email received, meeting created, or meeting interacted activities."

2. Mailbox usage. "It also provides information about how much storage has been consumed by each user mailbox, and how many of them are approaching storage quotas."

3. Email apps usage. Why? "In the email apps usage report, you can see how many email apps are connecting to Exchange Online."

There is no need for discussion just read the articles.

Statements	Yes	No
Third-party apps can be installed in Microsoft Teams.	○	○
Custom apps created by a company can be installed in Microsoft Teams.	○	○
Microsoft Store apps can be installed in Microsoft Teams.	○	○

Box 1: Yes -

Microsoft is allowing third-party app developers to integrate into the Microsoft Teams meeting experience for the first time. The new developer-focused features will let apps integrate into Teams meetings during video calls, and even before and after meetings.

You can purchase third-party apps for Teams.

Box 2: Yes -

Box 3: No -

You purchase and manage the apps through Microsoft Teams admin center.

Reference:

https://docs.microsoft.com/en-us/microsoftteams/purchase-third-party-apps

---

👤 **wando5000** `Highly Voted 👍` 1 year, 9 months ago

Answer is correct

The different types of apps that your end-users can use in Teams are:

Core apps that are part of Teams.

Other apps created by Microsoft.

Third-party apps by partners (validated by Microsoft).

Custom apps created by your own organization.

In addition to Microsoft-provided apps, you can use Microsoft-validated third-party apps. Microsoft validates the functionality and security of these apps before making these apps available in Teams store.

Apps created by developers in your organization are called custom apps (or Line of Business apps). Your organization may commission the creation of custom apps for org-specific requirements.

A company is migrating to Microsoft 365.

You need to recommend solutions for the company.

Which Microsoft 365 Apps apps should you use? To answer, drag the appropriate apps to the correct features. Each app may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Select and Place:

Apps

| Microsoft Excel |
| Microsoft OneNote |
| Microsoft PowerPoint |
| Microsoft Word |

Answer Area

Feature	App
Provides a service to help you find and incorporate reliable sources and content with automatic bibliography updates.	
Provides a service that uses machine learning and natural language processing for advanced proofing and editing.	
Provides a service that matches content in a slide to professionally designed layout recommendations.	

Suggested Answer:

Apps

| Microsoft Excel |
| Microsoft OneNote |
| Microsoft PowerPoint |
| Microsoft Word |

Answer Area

Feature	App
Provides a service to help you find and incorporate reliable sources and content with automatic bibliography updates.	Microsoft OneNote
Provides a service that uses machine learning and natural language processing for advanced proofing and editing.	Microsoft Word
Provides a service that matches content in a slide to professionally designed layout recommendations.	Microsoft PowerPoint

Box 1: Microsoft OneNote -

What does Microsoft OneNote do?

OneNote is a digital notebook that automatically saves and syncs your notes as you work. Type information in your notebook or insert it from other apps and web pages. Take handwritten notes or draw your ideas. Use highlighting and tags for easy follow-up.

Box 2: Microsoft Word -

A new feature now being rolled out in Editor in Word can use more sophisticated AI to offer suggestions for rewriting full sentences rather than offering spelling or grammar fixes one at a time. In internal evaluations, it was nearly 15 percent more effective than previous approaches in catching mistakes commonly made by people who have dyslexia, Microsoft says.

That's largely because the deep learning algorithms that can offer those rewrites were trained on large and diverse datasets, including documents written in the real world by people with dyslexia, rather than a narrow and finite set of linguistic rules.

Box 3: Microsoft PowerPoint -

☐ 👤 **manschadow** `Highly Voted 👍` 2 years, 7 months ago

I think the first answer is Word.

In the Microsoft learning this is the answer "Word can help you create documents and improve your writing with built-in intelligent features like Editor to help with editing, and Researcher to help find sources and bibliography creation."

The question for that answer was: "You're going to write a research paper and would like help with editing, finding reliable sources and creating a bibliography. Which Microsoft 365 app is most suitable?"

upvoted 10 times

☐ 👤 **valente_sven1** 1 year, 10 months ago

I think the first one should be MS Word;
"Choose Add New Source and fill out the information about your source.
Once you've added a source to your list, you can cite it again:

Put your cursor at the end of the text you want to cite.

Go to References > Insert Citation, and choose the source you are citing."

"Create a bibliography, citations, and references - Word for Microsoft 365 Word 2021 Word 2019 Word 2016 Word 2013 "
"Tip: If you cite a new source, add it to the bibliography by clicking anywhere in the bibliography and selecting Update Citations and Bibliography"

Sorry I am wrong. The answer is MS Onenote
Researcher in OneNote helps you find topics and incorporate reliable sources and content for your research paper in just a few steps. Explore and research the material related to your content and add it to your notes without leaving OneNote.

https://support.microsoft.com/en-us/office/research-your-paper-easily-within-onenote-for-windows-10-62eed90e-f712-4b4a-8476-51ed0f1152d4

DRAG DROP -

A company plans to adopt Microsoft cloud solutions.

You need to identify which platform is appropriate for each solution component.

Which platform should you select? To answer, drag the appropriate platforms to the correct solution components. Each platform may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Select and Place:

Platforms

| Dynamics 365 |
| Microsoft Azure |

Answer Area

Solution component	Platform
Microsoft-developed customer relationship management (CRM) application	
Windows virtual machine	
Microsoft-developed enterprise resource planning (ERP) application	

Suggested Answer:

Platforms

| Dynamics 365 |
| Microsoft Azure |

Answer Area

Solution component	Platform
Microsoft-developed customer relationship management (CRM) application	Dynamics 365
Windows virtual machine	Microsoft Azure
Microsoft-developed enterprise resource planning (ERP) application	Dynamics 365

Box 1: Dynamics 365 -

Why use Dynamics 365 for CRM?

With Dynamics 365, you get a flexible solution that's customizable to suit your business requirements. Choose a stand-alone application to meet the needs of a specific line of business or use multiple CRM tools that work together as a powerful integrated solution.

Box 2: Microsoft Azure -

Box 3: Dynamics 365 -

Transform your business with Microsoft Dynamics 365ג€"intelligent business solutions that seamlessly integrate ERP capabilities. Based in the cloud, Dynamics

365 apps help break down silos across your business by giving your team a unified view of operations.

correct

A company is evaluating Microsoft 365 services.

You need to determine which payment options are supported with a billing profile.

Which three options are supported? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

    A. money order

    B. debit card

    C. check

    D. cash

    E. credit card

Suggested Answer: *BCE*

If your billing profile is backed by invoice payments, you can't change the payment method. You can use the Pay now button on your invoice to pay with a credit or debit card, or by check or EFT.

https://learn.microsoft.com/en-us/azure/cost-management-billing/manage/change-credit-card

"Important

Over the next several months, Microsoft is removing physical checks as an accepted payment method. As of April 1, 2023, payment by check is no longer be supported for new and previously non-check-paying customers. Existing check-paying customers have until September 30, 2023, to transition to paying by electronic funds transfer such as wire/ACH. This change doesn't affect customers that currently pay via wire/ACH or credit card. See your invoice for EFT payment information."

👤 **Shooey** 2 years ago

Correct

upvoted 1 times

👤 **DavidMR** 2 years ago

Correct:

You can pay for your subscription with a credit or debit card, or a bank account and you can pay by check (only available in a few contries)

https://learn.microsoft.com/es-es/microsoft-365/commerce/billing-and-payments/pay-for-your-subscription?view=o365-worldwide

upvoted 1 times

👤 **ee1974** 2 years, 3 months ago

debit-credit card and bank account. however, I dont see bank account among choices?

When you buy business products or services from Microsoft, you can use an existing payment method, or add a new one. You can use a credit or debit card, or bank account to pay for the things you buy.

Note

The option to pay with a bank account is not available in some countries or regions.

HOTSPOT -

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Hot Area:

Statements	Yes	No
You can use Microsoft Teams and SharePoint Newsfeed to provide enterprise social features in SharePoint.	○	○
You can disable the enterprise social collaboration feature in SharePoint.	○	○
You can use different enterprise social collaboration services in SharePoint simultaneously.	○	○

Suggested Answer:

Statements	Yes	No
You can use Microsoft Teams and SharePoint Newsfeed to provide enterprise social features in SharePoint.	○	○
You can disable the enterprise social collaboration feature in SharePoint.	○	○
You can use different enterprise social collaboration services in SharePoint simultaneously.	○	○

Box 1: Yes -

Your SharePoint newsfeed is where you can see what your co-workers are doing throughout your work day and share ideas and observations as they occur to you. You can change what you share with the newsfeed settings.

Depending on your newsfeed settings, the feed may also send emails to you to notify you of events, such as when someone mentions you in a post, and it may show your activities, such as when you've started following someone. You control email notifications and which of your activities you want to share with others.

Box 2: Yes -

The option to hide Newsfeed was removed under Show or Hide Options. You can choose to Use Yammer.com service to hide Newsfeed if your organization do not have Yammer license. However, by doing this, users still can access Newsfeed via URL. So, we suggest you follow the steps below to disable Newsfeed activities.

1. Sign in to Office 365 with your work or school account.

2. Go to the SharePoint admin center.

3. Select user profiles.

4. Under My Site Settings, click Setup My Sites.

5. In the Newsfeed section, select or clear the Enable activities in My Site newsfeeds check box.

6. Click OK.

Box 3: No -

Office 365 includes two options for enterprise social features in SharePoint: Yammer and Newsfeed. The SharePoint administrator selects which option users see when they click Conversations in SharePoint. By default, users see Newsfeed.

Enterprise Social Collaboration

Make Yammer the primary social experience for everyone in your organization. Switching services will replace Newsfeed and change the Office 365 global navigation. This update might take up to 30 minutes for us to complete.

To learn more click here.

○ Use Yammer.com service
◉ Use SharePoint Newsfeed (default)

HOTSPOT -

A company is evaluating solutions to improve their customer service capabilities.

When customers call the company, they should be directly routed to the appropriate customer service person.

You need to recommend solutions for the company's requirements.

Which solutions should you recommend? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Hot Area:

Requirement	Solution
Implement Direct Routing.	▼
	Microsoft Teams Phone
	Outlook People
	Yammer
	Microsoft Viva
Connect the correct customer service associate to a customer.	▼
	Microsoft Viva
	Outlook People
	Microsoft Teams Phone
	Microsoft Stream

Suggested Answer:

Requirement	Solution
Implement Direct Routing.	▼
	Microsoft Teams Phone
	Outlook People
	Yammer
	Microsoft Viva
Connect the correct customer service associate to a customer.	▼
	Microsoft Viva
	Outlook People
	Microsoft Teams Phone
	Microsoft Stream

Box 1: Microsoft Teams Phone -

Microsoft Teams Phone supports Direct Routing.

Box 2: Microsoft Viva -

Microsoft Viva is an employee experience platform that brings together communications, knowledge, learning, resources, and insights in the flow of work. Powered by Microsoft 365 and experienced through Microsoft Teams, Viva fosters a culture that empowers employees and teams to be their best from anywhere.

exam Question in September

upvoted 1 times

A company is evaluating Microsoft 365.

You need to identify the features of Microsoft Stream.

What are three features of Microsoft Stream? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

A. Video files are stored in SharePoint Online.

B. Video files are stored in Yammer.

C. Video files are stored in Exchange Online.

D. Video files can be accessed from Microsoft Teams.

E. Video files can be accessed from Yammer.

Suggested Answer: *ADE*

A: New version of Microsoft stream (July 2022).

Where will video files be stored?

Videos in Stream (on SharePoint) will be stored in the same place you store your Office files, in Teams, SharePoint, OneDrive, and Yammer.

Stream will enhance those videosɹ€"powering the playback and adding intelligent video experiences on top.

ADE: Video and audio files will be stored on the SharePoint files platform within Microsoft 365 like all other file types. Already today, SharePoint powers file experiences for Microsoft Teams, OneDrive, Yammer, and Outlook.

A company uses Microsoft 365 to track progress and issues for construction projects.

Project tasks must be tracked within a Microsoft-maintained unified interface that can be shared and updated across multiple users.

You need to recommend a solution for the company.

What should you recommend?

    A. Microsoft Outlook

    B. Microsoft Planner

    C. Microsoft Stream

    D. Microsoft To Do

Suggested Answer: *B*

Microsoft Planner is a planning application available on the Microsoft 365 platform. The application is available to premium, business, and educational subscribers to Microsoft 365. Microsoft Planner is a team-work oriented tool that can be used in a variety of ways. Some of Planner's uses include team management, file sharing, and organization.

Incorrect:

Not D: A smart daily planner -

Set yourself up for success with My Day, intelligent and personalized suggestions to update your daily or weekly to do list. With both a Microsoft to do desktop app and mobile app available, it is easy to stay on task all day long.

A company is evaluating Microsoft's virtualization services.

Which feature is unique to Windows 365?

    A. Users can connect to a virtual machine by using the Microsoft Remote Desktop app.

    B. Users can connect to a virtual machine by using a web site.

    C. A virtual machine can authenticate users to Active Directory Domain Services (AD DS).

    D. A virtual machine can be provisioned from a custom image.

    E. A virtual machine is automatically provisioned after assigning a license to a user.

Suggested Answer: *E*

Windows 365 is a cloud-based service that automatically creates a new type of Windows virtual machine (Cloud PCs) for your end users. Each Cloud PC is assigned to an individual user and is their dedicated Windows device. Windows 365 provides the productivity, security, and collaboration benefits of Microsoft 365.
Reference:
https://docs.microsoft.com/en-us/windows-365/overview

  ☐ 👤 **DebW** 11 months ago

https://learn.microsoft.com/en-us/windows-365/enterprise/provisioning

Provisioning in Windows 365 is the automated process that:

Creates a Cloud PC virtual machine.
Sets it up for the user.
Completes other tasks that prepare it to be used.
Sends access information to the user.

So E is correct for this one
  upvoted 1 times

  ☐ 👤 **jim85** 1 year, 5 months ago

https://learn.microsoft.com/en-us/windows-365/enterprise/provisioning >> so E
Then, users who have a Windows 365 license and match the configuration details will automatically have a Cloud PC provisioned for them.
Provisioning is a one-time per user and per-license process. Any given user and license pair can only have one Cloud PC provisioned for them.

A company is planning to migrate to Microsoft 365.

The company requires a service that meets the following requirements:

☞ Aggregates third-party training content and internal company content.

☞ Allows managers to assign, track, and report on training.

You need to recommend a Microsoft Viva solution that meets the requirements.

Which solution should you recommend?

    A. Microsoft Viva Topics

    B. Microsoft Viva Insights

    C. Microsoft Viva Learning

    D. Microsoft Viva Connections

Suggested Answer: *C*

Managers -

Keep your team engaged and up to date with necessary skills without the need to coordinate learning across platforms. You can recommend learning content to individuals, share content with your team, and track the reported completion status of learning that you've recommended. Viva Learning can integrate with select third-party content providers and learning management systems.

MaggieXLin `Highly Voted 👍` 10 months, 1 week ago

C is correct here is why:

Viva Learning is a centralized learning hub in Teams that allows you to easily integrate learning and building skills into your day.

• Your team can discover, share, recommend and learn from content libraries provided by both your company and partners.

• Collects content from LinkedIn Learning, Microsoft Learn, third party training content and internal content of your own all in one place.

Viva Topics: Bring knowledge to users in the M365 apps they use. Uses AI to identify knowledge and experts and organizes them into shared topics.

Viva insights: provides privacy-protected insights and actionable recommendations that help everyone work smarter and achieve balance.

Viva connections: keeps everyone in the workforce connected to each other.

Answer Area

Statements	Yes	No
Files that are stored in OneDrive can be opened from File Explorer without the need for files to persist on the users' devices.	●	○
OneDrive supports hybrid scenarios with SharePoint on-premises and cloud applications.	●	○
OneDrive requires that data be stored at a location closest to a user's region.	○	●

Box 1: Yes -

OneDrive Files On-Demand helps you access all your cloud storage in OneDrive without having to download all of them and use file storage space on your

Windows device.

When you turn on Files On-Demand, you'll see all your files in File Explorer and get new information about each file. New files created online or on another device appear as online-only files, which don't take up space on your device. When you're connected to the Internet, you'll be able to use the files like every other file on your device.

Box 2: Yes -

Box 3: No -

Data Center Geographies -

The following global geographies can store data at rest. The locations where customer data may be stored can change.

Global Geographies	Locations where customer data may be stored
Global Geography 1 – EMEA (Europe, Middle East and Africa)	Austria, Finland, France, Ireland, Netherlands, Sweden
Global Geography 2 – Asia Pacific	Hong Kong, Japan, Malaysia, Singapore, South Korea
Global Geography 3 - Americas	Brazil, Chile, United States

Note: Within Microsoft 365, OneDrive is built on top of the SharePoint file platform.

First is in my opinion not 100% correct because the file will be downloaded when you open it. You cannot open it just beeing online.

But I assume Microsoft wants to promote the cool online/offline feature so the answer is ment to be true..
  upvoted 3 times

  ⊟ 👤 **HuisingaJ** 10 months, 1 week ago
The question states "persists" which means that the file has to stay locally. This is not true so answer given is right
  upvoted 3 times

A company deploys Microsoft Azure AD. You enable multi-factor authentication.

You need to inform users about the multi-factor authentication methods that they can use.

Which of the following methods is NOT a valid multi-factor authentication method in Microsoft 365?

    A. Receive an automated call on the desk phone that includes a verification code

    B. Insert a small card in to a desktop computer and provide a PIN code when prompted

    C. Receive a call on a mobile phone and select the pound sign (#) when prompted

    D. Receive an SMS text message that includes a verification code

---

Suggested Answer: *B*

    I totally agree with this answer

    upvoted 5 times

    ☐ 👤 **I_know_everything** 1 year, 6 months ago

    Incorrect: phone options DO get you a verification code

    and

    while hardware tokens *are* (a rare) option, they are not "insert a card in computer" type - they are response type hardware devices that perform similar to authenticator apps.

    upvoted 3 times

☐ 👤 **m_figuer** `Highly Voted 👍` 4 years ago

Correct Answer is B. Here's the proof:

https://answers.microsoft.com/en-us/msoffice/forum/msoffice_o365admin-mso_password-mso_o365b/mfa-cant-add-office-phone-as-mfa-option-and-cant/0961d8c2-c2ce-4be8-903e-7422b2b03d85

    ☐ 👤 **wando5000** 2 years, 10 months ago

    It says'call to phone'

    It doesn't say what you should do upon receiving the call - enter # or PIN

    The options listed are;

    call to phone

    text message to phone

    Notification through mobile app

    Verification code from mobile app or hardware token

    Receive an automated call on the desk phone that includes a verification code

    upvoted 2 times

☐ 👤 **AntonioTech** `Most Recent ⊙` 2 months, 2 weeks ago

`Selected Answer: A`

The multi-factor authentication method that is NOT a valid method in Microsoft 365 among the options provided is:

A. Receive an automated call on the desk phone that includes a verification code

Here's why:

B. Insert a small card into a desktop computer and provide a PIN code when prompted: This describes using a smart card, which is a valid MFA method in Microsoft 365.

C. Receive a call on a mobile phone and select the pound sign (#) when prompted: This describes phone call authentication, where the user confirms their sign-in by pressing a key on their phone, which is a valid MFA method.

D. Receive an SMS text message that includes a verification code: This describes SMS-based authentication, which is a common and valid MFA method in Microsoft 365.

upvoted 1 times

☐ 👤 **lunchmode** 3 months, 1 week ago

Selected Answer: B

The correct answer is:

B. Insert a small card into a desktop computer and provide a PIN code when prompted

Explanation:
This is not a valid multi-factor authentication (MFA) method in Microsoft 365 / Azure AD. While smart cards (physical cards with certificates) can be used for authentication in some enterprise environments, the described method (inserting a card into a desktop computer and entering a PIN) is not one of the standard Azure AD MFA methods.

https://learn.microsoft.com/en-us/azure/active-directory/authentication/concept-authentication-methods

upvoted 1 times

☐ 👤 **Tamar1000BC** 5 months, 2 weeks ago

Selected Answer: B

In Microsoft 365, the valid multi-factor authentication (MFA) methods include:

A. Receiving an automated call on the desk phone that includes a verification code.

C. Receiving a call on a mobile phone and selecting the pound sign (#) when prompted.

D. Receiving an SMS text message that includes a verification code.

However, option B, "Insert a small card into a desktop computer and provide a PIN code when prompted," is not a valid MFA method in Microsoft 365. This method describes a smart card authentication, which is not part of the standard MFA options provided by Microsoft 365.

upvoted 1 times

☐ 👤 **Sergio_G_S** 6 months, 1 week ago

Selected Answer: A

B is a token hardware. Is a MFA methos valid. A is the answer

upvoted 1 times

☐ 👤 **Sergio_G_S** 6 months, 1 week ago

Selected Answer: A

B is a valid method MFA. yubikey works like this

upvoted 1 times

☐ 👤 **SuhailJ** 9 months, 1 week ago

Selected Answer: B

The method that is **NOT** a valid multi-factor authentication (MFA) method in Microsoft 365 is:

B. Insert a small card into a desktop computer and provide a PIN code when prompted.

This method refers to using a smart card, which is not one of the supported MFA methods in Microsoft 365. The valid MFA methods in Microsoft 365 include options like calls, SMS text messages, app notifications, and verification codes.

You are a Microsoft 365 administrator for a company.

Several users report that they receive emails which have a PDF attachment. The PDF attachment launches malicious code.

You need to remove the message from inboxes and disable the PDF threat if an affected document is opened.

Which feature should you implement?

    A. Microsoft Exchange Admin Center block lists

    B. Sender Policy Framework

    C. Advanced Threat Protection anti-phishing

    D. zero-hour auto purge

    E. DKIM signed messages with mail flow rules

Suggested Answer: *D*

In Microsoft 365 organizations with mailboxes in Exchange Online, zero-hour auto purge (ZAP) is an email protection feature that retroactively detects and neutralizes malicious phishing, spam, or malware messages that have already been delivered to Exchange Online mailboxes.

upvoted 22 times

👤 **Sergio_G_S** `Most Recent ⊘` 6 months, 1 week ago

`Selected Answer: D`

To address the issue of malicious PDF attachments, you should implement zero-hour auto purge (ZAP). ZAP is a feature in Microsoft 365 that automatically detects and removes malicious emails from user inboxes after they have been delivered. This helps to mitigate the threat by removing harmful messages even after they have been received.

upvoted 1 times

👤 **Genichiro** 8 months, 4 weeks ago

`Selected Answer: D`

It is D "imilarly, while zero-hour auto purge can help in quickly removing malicious emails, it's more reactive than preventive. Advanced Threat Protection, on the other hand, is specifically designed to handle such threats and provide proactive protection against them."

In this question the users are already pointing out they recieve these mails. So in this specific question ZAP would be the best option imo.

upvoted 1 times

Nazz1977 11 months, 2 weeks ago

To address the issue of malicious PDF attachments in emails, you should implement the following features:

C. Advanced Threat Protection anti-phishing

Microsoft 365's Advanced Threat Protection (ATP) anti-phishing features are designed to help protect against malicious content, including harmful attachments in emails. ATP uses advanced algorithms and machine learning to detect and block phishing attempts, malware, and other threats. In this case, the anti-phishing feature would be particularly relevant for identifying and blocking emails with malicious PDF attachments.

Options A (Microsoft Exchange Admin Center block lists), B (Sender Policy Framework), D (zero-hour auto purge), and E (DKIM signed messages with mail flow rules) are not specifically designed to address the issue of malicious attachments or phishing threats in emails. While these features may have their own security benefits, they are not the most direct solution for the described problem.

Selected Answer: C

correct answer is c for the purpose of this exam

upvoted 2 times

JayLearn2022 1 year, 9 months ago

Answer: C

To address the reported issue of malicious PDF attachments, you should implement Advanced Threat Protection (ATP) anti-phishing in Microsoft 365. This feature provides protection against various types of advanced threats, including phishing emails with malicious attachments.

In this scenario, ATP anti-phishing can help to remove the message from the inboxes of affected users and disable the PDF threat if an affected document is opened. It uses machine learning and other advanced techniques to detect and prevent phishing attacks, including those with malicious attachments like PDFs.

upvoted 1 times

JayLearn2022 1 year, 9 months ago

Option A, Microsoft Exchange Admin Center block lists, can be used to block specific senders or domains, but it may not be effective against sophisticated phishing attacks with spoofed or compromised sender addresses.

Option B, Sender Policy Framework (SPF), is an email authentication method that validates the sender's domain, but it does not provide protection against phishing attacks with malicious attachments.

Option D, zero-hour auto purge, is a feature that deletes messages that match certain criteria, but it does not prevent users from receiving or opening the messages in the first place.

Option E, DKIM signed messages with mail flow rules, is another email authentication method that verifies the integrity of the message content, but it does not protect against phishing attacks with malicious attachments.

DRAG DROP -

You are a Microsoft 365 administrator for a company.

A customer submits a data subject request (DSR) to delete customer information in compliance with General Data Protection Regulation (GDPR).

You must place legal holds on related data whenever possible.

You need to respond to the request by searching for the customer's data in various Microsoft 365 tools.

How should you search for the data? To answer, drag the appropriate search methods to the correct Microsoft 365 applications. Each search method may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

Select and Place:

Answer Area

Search methods	Microsoft 365 application	Search method
Content Search eDiscovery	Microsoft SharePoint Online	
In the app	Microsoft Access	
	Microsoft Outlook	
	Microsoft PowerApps	

Suggested Answer:

Retire, Wipe, Delete and Fresh start options all provide data removal in various forms

upvoted 34 times

　👤 **oxaytol** 3 years, 8 months ago

　This is the right answer

　upvoted 3 times

👤 **TheExpert** `Highly Voted 👍` 4 years, 5 months ago

Four options are :

- Retire

- Wipe

- Fresh Start (+ unselecting the option "Retain user data")

- Remote lock (lock the device and force the user to enter its PIN Code) => It secures the data.

- Delete is a wrong answer : it only removes the device from the Intune list.

upvoted 26 times

　👤 **wando5000** 2 years, 3 months ago

　I agree - see below - the data stays on the device until the next time it checks into intune - so data is not secured

If you want to remove devices from the Intune portal, you can delete them from the specific device pane. The next time the device checks in, any company data on it will be removed as Intune also retires a device when deleting it from the console.

upvoted 1 times

wando5000 2 years, 3 months ago

Wipe, Fresh Start, Retire & Restart (need to know the password to logon again otherwise cant access data)

upvoted 2 times

oxaytol 3 years, 8 months ago

No, it's not a wrong answer. When you click on delete it calls the retire command, so it's the same but with removing also the device from the list.

SOURCE: https://karstenkleinschmidt.de/2020/09/09/intune-what-is-retire-wipe-delete-fresh-start-autopilot-reset/#:~:text=If%20you%20want%20to%20remove,personal%20data%20on%20the%20device.&text=Apps%20are%20uninstalled.

Remote lock not supported for windows 10 desktop.
https://docs.microsoft.com/en-us/mem/intune/remote-actions/device-remote-lock

upvoted 10 times

wando5000 2 years, 4 months ago

Remote lock is supported for the following platforms:
Android
Android Enterprise kiosk devices
Android Enterprise work profile devices
Android Enterprise fully managed devices
Android Enterprise corporate-owned with work profile devices
iOS
macOS
Remote lock isn't supported for:
Windows 10 desktop

upvoted 3 times

benpatto `Most Recent ⊘` 1 year, 4 months ago

Delete is similar to retire except it removes it from the list immediately.

After deleting, the device will be removed from the all devices list and then when next powered on, it'll begin the 'retire' process automatically.
Retire will stay in the list until the retire process is complete

upvoted 2 times

syu31svc 3 years, 6 months ago

Correct Retire, Wipe, Delete and Fresh start

upvoted 1 times

Sleeping_cat 3 years, 9 months ago

Delete - If you want to remove devices from the Intune portal, you can delete them from the specific device pane. The next time the device checks in, any company data on it will be removed.

upvoted 2 times

oxaytol 3 years, 8 months ago

And this is the explanation why remote lock is not a good answer. Response is Retire, wipe, delete and fresh start.

upvoted 1 times

TMW 3 years, 9 months ago

Retire, Delete, Wipe, and Fresh start, all have options to remove/secure the data from the device.

https://docs.microsoft.com/en-us/mem/intune/remote-actions/devices-wipe

Remote lock is not an option because this happens to be a Windows 10 desktop device:

https://docs.microsoft.com/en-us/mem/intune/remote-actions/device-remote-lock

upvoted 5 times

Rstilekar 4 years ago

Retire, Wipe, Delete and Fresh start options all provide data removal in various forms
• A Wipe restores a device back to its factory settings (back to OOBE). This is what you should use for a lost or stolen device, since data can't be restored.
• Retire, on the other hand, removes only managed data & apps.
• Delete is nearly identical to Retire. Both options will remove the same company data from a device. But while Retire will wait for a device to check-in before removing it from the portal, Delete immediately deletes the record in Intune. In general it's recommended to Retire a device before Deleting it, but if you have stale records from re-provisioning locally you can use Delete.
• Fresh Start is nearly identical to Wipe. Just like with the Wipe, Fresh Start includes the option to retain user data on the device.
• Remote lock not supported for windows 10 desktop.
• Restart will just restart the device.

upvoted 5 times

Lauryss 4 years, 1 month ago

the correct answer is retire, wipe , delete and remote lock

upvoted 1 times

Dharmesh16 10 months ago

Remote Lock is disabled...

upvoted 1 times

TechieBloke 4 years, 1 month ago

I would say, wipe, retire, restart (need to login again or enter pin - so it's secure), fresh restart (don't keep user data option).

Wipe, retire, delete, remote lock

upvoted 4 times

☐ 👤 **Rooks** 4 years, 7 months ago

Why is it remote lock instead of Fresh?

upvoted 2 times

☐ 👤 **Rickerttt** 4 years, 6 months ago

Fresh restart keeps the data on the device. (it will only Install Windows again)

So I will go for: Wipe, retire, delete, remote lock

upvoted 2 times

You are the Microsoft 365 administrator for a company.

All staff must use Microsoft Outlook to access corporate email. When users access Outlook on mobile devices, they must use a PIN to open the application.

You need to implement a Microsoft Intune policy to enforce the security requirements.

Which policy should you use?

    A. device compliance

    B. device configuration

    C. app protection

    D. app configuration

Suggested Answer: *C*

Reference:

https://docs.microsoft.com/en-us/intune/app-protection-policy

Community vote distribution

C (100%)

👤 **syu31svc** `Highly Voted 👍` 3 years ago

https://docs.microsoft.com/en-us/mem/intune/apps/app-protection-policy:

"App protection policies makes sure that the app-layer protections are in place. For example, you can:

Require a PIN to open an app in a work context"

C for correct

upvoted 5 times

👤 **Tamar1000BC** `Most Recent ⊘` 5 months, 2 weeks ago

`Selected Answer: C`

The correct policy to use is C. app protection.

Explanation:

- **App protection policies** in Microsoft Intune are used to protect company data at the application level. These policies can enforce requirements such as requiring a PIN to access specific applications, like Microsoft Outlook, on mobile devices.
- **Device compliance policies** ensure that devices meet certain security requirements before they can access company resources, but they do not specifically enforce app-level security settings.
- **Device configuration policies** are used to configure settings on devices, but they do not specifically target app-level security requirements.
- **App configuration policies** are used to configure settings within applications, but they do not enforce security requirements like requiring a PIN to open an app.

Therefore, to enforce the requirement that users must use a PIN to open the Outlook application on mobile devices, you should use an **app protection policy**.

👤 **ljljljlj** 1 year ago

C is the right answer.

upvoted 1 times

👤 **JayLearn2022** 1 year, 3 months ago

The correct policy to use for this scenario is C. App protection.

App protection policies in Microsoft Intune enable organizations to protect corporate data on mobile devices without requiring device enrollment or management. With app protection policies, you can configure data protection settings for specific apps, such as Microsoft Outlook, to ensure that corporate data is protected regardless of whether the device is managed by the organization.

In this scenario, you can create an app protection policy in Intune that requires a PIN to be used when accessing Outlook on mobile devices. This policy can be targeted to specific users or groups of users and can be configured to apply to iOS, Android, and Windows devices.

upvoted 2 times

☐ 👤 **JayLearn2022** 1 year, 3 months ago

Device compliance policies are used to evaluate the compliance of devices based on a set of predefined rules and conditions, such as operating system version, security settings, and device health. Device configuration policies are used to configure settings and features on devices, such as Wi-Fi and VPN profiles, and can be used to manage devices that are enrolled in Intune.

App configuration policies are used to configure settings and features within specific apps, such as custom branding and user preferences, and are typically used to enhance the user experience within the app rather than enforce security requirements.

😑 👤 **neozed** `Highly Voted 👍` 9 months, 1 week ago

`Selected Answer: B`

B. Service Trust Portal is the correct site to obtain audit and assessment reports for Microsoft 365 cloud services, including Exchange Online and SharePoint Online. The Service Trust Portal provides customers with a comprehensive view of how Microsoft implements and supports security, compliance, and privacy in Microsoft cloud services. It includes audit reports and other compliance documentation that can be used to assess Microsoft's security and compliance controls. The Compliance Manager (A) is a tool within the Office 365 Security and Compliance Center (C) that helps organizations manage their compliance activities. The Office 365 Security and Compliance Center (C) provides a centralized location for managing security and compliance across various Office 365 services, but it does not provide audit and assessment reports. The Azure portal (D) is primarily used for managing Azure resources and does not provide audit and assessment reports for Office 365 services.

HOTSPOT -

A company uses Microsoft 365 Business to address its compliance needs. A customer requests a complete disclosure of all personal data that relates to them.

You need to create a new data subject request (DSR) case and ensure that compliance managers can view all DSR case findings.

In which two areas must you perform actions? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Hot Area:

Suggested Answer:

☐ 👤 **ptmk** `Highly Voted 👍` 11 months, 2 weeks ago

This all looks very outdated;

https://learn.microsoft.com/en-us/compliance/regulatory/gdpr-manage-gdpr-data-subject-requests-with-the-dsr-case-tool?view=o365-worldwide#step-2-create-a-uds-case-and-add-members

Purview Compliance portal

1 - assign permission to case member

2- create uds case and add members:

- compliance

- Data subjects requests

- User data search, create a case

-new user data search...

upvoted 17 times

Silvia `Highly Voted 👍` 3 years, 8 months ago

Solution :

Data admin: app discovery reports

Maintain data policy: manage eDiscover cases

upvoted 16 times

ElmarK `Most Recent ⊘` 2 years ago

Permissions => assign the mangers the persmissions they need and Data privacy to start the data subject request.

upvoted 1 times

Ulus 2 years ago

DSR is called User data search since sept.21

HOTSPOT -

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Statement	Yes	No
You can assign apps to devices that are not enrolled with Microsoft Intune.	○	○
You can assign wrapped apps, or apps that incorporate the Intune SDK, only if the device is enrolled with Intune.	○	○
You can install available apps from the web-based Company Portal app regardless of whether the device if enrolled with Intune.	○	○

Suggested Answer:

Answer Area

Statement	Yes	No
You can assign apps to devices that are not enrolled with Microsoft Intune.	○	●
You can assign wrapped apps, or apps that incorporate the Intune SDK, only if the device is enrolled with Intune.	○	●
You can install available apps from the web-based Company Portal app regardless of whether the device if enrolled with Intune.	●	○

Box 1: No -

You can only assign apps to devices that are enrolled with Intune. You cannot assign apps to devices that are not enrolled with Intune.

Box 2: No -

You can assign wrapped apps or apps that incorporate the Intune SDK to devices that are not enrolled with Intune.

Box 3: Yes -

You can install available apps from the web-based Company Portal to devices that are enrolled with Intune and devices that are not enrolled with Intune.

Reference:

☐ 👤 **oxaytol** `Highly Voted 👍` 3 years, 8 months ago

OMG, another disuccion without proper response. Short answer, the response provided is CORRECT. Further explanation:

- First one: YES. Please check the following source in which the following is specified: Currently, you can assign iOS/iPadOS and Android apps (line-of-business and store-purchased apps) to devices that aren't enrolled with Intune. https://docs.microsoft.com/en-us/mem/intune/apps/apps-deploy

- Second one: NO. In the same source added above, you can check the table in wich is specified that it supports both enrolled and not enrolled with intune.

- Third one: YES. As above, checking in the table you can see that installing from THE WEB BASED is supported for devices enrolled and not enrolled. This would not be correct if question was about installing app from THE COMPANY PORTAL APP. In this last case you can only do it for devices enrolled with intune.

Hope it helps!

Wrong, it is N,N,Y
read the source that you have provided again!
upvoted 3 times

wando5000 2 years, 4 months ago
I think MS made a mistake in that table

It says 'NO' for option 'Assign to devices' when 'Devices not enrolled with Intune'

But at the beginning it clearly says 'It is important to note that you can deploy an app to a device whether or not the device is managed by Intune'
upvoted 1 times

wando5000 2 years, 3 months ago
Apologies. Distinction between 'manage' and 'assign'. You cannot 'assign' an app to a device if the device is not enrolled with intune
upvoted 1 times

wando5000 2 years, 3 months ago
You can assign wrapped apps or apps that incorporate the Intune SDK (for app protection policies) wether or not the device is enrolled with intune
upvoted 1 times

manbaby `Highly Voted 👍` 3 years, 9 months ago
No,No,Yes
Option Devices enrolled with Intune Devices not enrolled with Intune
Assign to users Yes Yes
Assign to devices Yes No
Assign wrapped apps or apps that incorporate the Intune SDK (for app protection policies) Yes Yes
Assign apps as Available Yes Yes
Assign apps as Required Yes No
Uninstall apps Yes No
Receive app updates from Intune Yes No
End users install available apps from the Company Portal app Yes No
End users install available apps from the web-based Company Portal Yes Yes

☐ 👤 **fifthforge** 1 year, 4 months ago

chat gpt : Yes No Yes

1: True - You can assign apps to devices that are not enrolled with Microsoft Intune. This is often done using the "Available for enrolled devices" option.

2: False - You can assign wrapped apps or apps that incorporate the Intune SDK to both enrolled and unenrolled devices. However, certain management features might only be available on enrolled devices.

3: True - You can install available apps from the web-based Company Portal app regardless of whether the device is enrolled with Intune. The Company Portal app provides a way for users to install apps assigned to them by their organization.

the answers should be No. Yes , Yes

upvoted 1 times

☐ 👤 **Sheduic7720** 3 years, 8 months ago

sorry I meant No , No ,Yes as we could Assign Apps to Devices while the devices not enrolled with Intune and we could Assign wrapped apps or apps that incorporate the Intune SDK (for app protection policies), if the Devices are enrolled with Intune or if the Devices are not enrolled with Intune

upvoted 2 times

☐ 👤 **hvtsoftball11** 3 years, 8 months ago

It is no, no, yes.

You can assign apps to users not enrolled BUT not to devices. The wrapped apps that incorporate SDK can be if the device is enrolled or not enrolled (read carefully as the statement says only enrolled devices which is false), and the as long as it is the web based company portal enrolled and not enrolled devices can install available apps.

Yes No Yes is correct; why would anyone want to pay extra just to enable MFA?

upvoted 5 times

👤 **NZTechLabs** 1 year, 10 months ago

Love most of your responses, syu31svc, but I don't think you're correct on this one.

https://docs.microsoft.com/en-us/azure/active-directory/authentication/concept-mfa-licensing

MFA does not come at no cost with every type of licensing available; there are definite "upgrade" licenses which open up the feature for standard users.

(Besides that, completely agree with your sentiment about paying extra for MFA. It's absurd Microsoft doesn't include this as a free capability for every single account created no matter what licensing it has assigned. Do you want to actually promote security or not?)

upvoted 1 times

👤 **wando5000** 9 months, 2 weeks ago

Basic MFA is free

Basic multi-factor authentication features are available to Microsoft 365 and Azure Active Directory (Azure AD) users and global administrators

for no extra cost. If you want to upgrade the features for your admins or extend multi-factor authentication to the rest of your users with more authentication methods and greater control, you can purchase Azure AD Multi-Factor Authentication in several ways.

upvoted 5 times

⊟ 👤 **angelVCR** `Most Recent ⊘` 1 year, 10 months ago

I think is because it says additional license instead of "upgrade" and existing one?

upvoted 1 times

⊟ 👤 **ealcober** 2 years, 1 month ago

Next, create a conditional access policy to require multifactor authentication for members of the MFAUsers group.

In a new tab of your browser, go to https://portal.azure.com.

Select Azure Active Directory > Security > Conditional Access.

In the Conditional access – Policies pane, select New policy.

Cond Access policies is only available for Azure ADP1 licensed tenants

upvoted 2 times

DRAG DROP -

A company has Microsoft 365 and uses Microsoft Endpoint Manager.

You need to identify the endpoint management tool associated with each action.

Which tool should you identify for each action? To answer, drag the appropriate tools to the correct actions. Each tool may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Select and Place:
