

- Expert Verified, Online, **Free**.

As the Workspace Administrator, you have been asked to configure Google Cloud Directory Sync (GCDS) in order to manage Google Group memberships from an internal LDAP server. However, multiple Google Groups must have their memberships managed manually. When you run the GCDS sync, you notice that these manually managed groups are being deleted. What should you do to prevent these groups from being deleted?

- A. In the GCDS configuration manager, update the group deletion policy setting to "don't delete Google groups not found in LDAP."
- B. Use the Directory API to check and update the group's membership after the GCDS sync is completed.
- C. Confirm that the base DN for the group email address attribute matches the base DN for the user email address attribute.
- D. In the user attribute settings of the GCDS configuration manager options, set the Google domain users deletion/suspension policy to "delete only active Google domain users not found in LDAP."

**Suggested Answer: A**

Only correct Answer is A :)  
upvoted 3 times

Your marketing department needs an easy way for users to share items more appropriately. They want to easily link-share Drive files within the marketing department, without sharing them with your entire company. What should you do to fulfil this request? (Choose two.)

- A. Create a shared drive that's shared internally organization-wide.
- B. Update Drive sharing for the marketing department to restrict to internal.
- C. Create a shared drive for internal marketing use.
- D. Update the link sharing default to the marketing team when creating a document.
- E. In the admin panel Drive settings, create a target audience that has all of marketing as members.

CE - Definatly target audiences due to link share  
upvoted 1 times

 **jdosh** 1 year, 3 months ago

**Selected Answer:** BE

B, because the shared drive is already created based on the question so it makes sense you restrict that to internal to avoid accidentally sharing files outside the company. E, because you want Google to tell the marketing audience automatically who are their target users for sharing so they don't get confused and share the files with other users.  
upvoted 4 times

🗨️ 👤 **Sarilu31** 1 year, 3 months ago

Notice how the keyword is "link-share", they want to link share and so "Shared Drives" is no longer in the equation (Even though it seems the most appropriate). For me it would be D and E

upvoted 2 times

🗨️ 👤 **Debbz** 1 year, 5 months ago

**Selected Answer: CE**

C and E

upvoted 3 times

🗨️ 👤 **jaxclain** 1 year, 8 months ago

**Selected Answer: CE**

I correct myself, the correct answer is C and E because you will need a target audience to limit the marketing department not to share documents to other users internally. <https://support.google.com/a/answer/10356781?fl=1#zippy=%2Climit-link-sharing-to-only-employees>

upvoted 1 times

🗨️ 👤 **hazelcert** 1 year, 9 months ago

I think DE should be correct

upvoted 1 times

🗨️ 👤 **jaxclain** 1 year, 9 months ago

**Selected Answer: BC**

I also believe B and C are correct, those are the only 2 that makes sense, A and D are totally wrong... E also makes no sense if we are using Shared Drives which is Google Recommended Practices for collaboration Internally. Of course you will need a license that includes Shared Drives (Business Standard, Plus and any Enterprise.)

upvoted 2 times

🗨️ 👤 **RAZKZ** 1 year, 9 months ago

I don't fully understand why E is incorrect in your opinion, can you rephrase please?

upvoted 1 times

🗨️ 👤 **jaxclain** 1 year, 9 months ago

Because is a Google Best recommended practice to use Shared Drive if you want to: "They want to easily link-share Drive files within the marketing department, without sharing them with your entire company"

If you did watch the whole Google Workspace Administration Guide, there are 4-5 videos mentioning this, why would you keep using "My Drive" if what you want is to share within a team.. Shared Drive old name is Team Drives so yes, it has to be BC.

There is no way E is correct.

upvoted 1 times

🗨️ 👤 **RAZKZ** 1 year, 9 months ago

I think I miss-understood the structure of the answer.

When choosing B, C, does that mean you do BOTH these actions to achieve the requirement? or EITHER?

In the case of both this makes sense, in the case of EITHER, I would say between B and E, E makes more sense, there is no requirement for restricting access to external, just a requirement for making it "easily link-share Drive files within the marketing department"

This is my first google cert exam, so I'm still trying to get the hand of how they phrase things.

upvoted 2 times

🗨️ 👤 **jaxclain** 1 year, 8 months ago

Sorry, After reviewing the question a second time, I changed my mind, correct answer is CE, for sure has to be C because Shared Drive is Google best Recommended practices for sharing within Groups or teams.. and Target Audience to avoid these users to share documents internally: [https://support.google.com/a/answer/10356781?](https://support.google.com/a/answer/10356781?fl=1#zippy=%2Climit-link-sharing-to-only-employees)

[fl=1#zippy=%2Climit-link-sharing-to-only-employees](https://support.google.com/a/answer/10356781?fl=1#zippy=%2Climit-link-sharing-to-only-employees)

upvoted 2 times

🗨️ 👤 **coombek2** 1 year, 9 months ago

B and C are correct.

--

Why A, D, and E are wrong.

--

Option A involves creating a shared drive that is shared internally organization-wide, which does not restrict sharing to the marketing department.

Option D involves updating the link sharing default for the marketing team, but does not provide a solution for managing the sharing of Drive files.

Option E involves creating a target audience in the admin panel, but does not provide a way to restrict sharing to the marketing department.

upvoted 1 times

🗨️ 👤 **RAZKZ** 1 year, 9 months ago

They never mentioned to "restrict" to the marketing department.

They mentioned an easy link sharing to the marketing department.

upvoted 1 times

Your organization has a new security requirement around data exfiltration on iOS devices. You have a requirement to prevent users from copying content from a Google app (Gmail, Drive, Docs, Sheets, and Slides) in their work account to a Google app in their personal account or a third-party app. What steps should you take from the admin panel to prevent users from copying data from work to non-work apps on iOS devices?

- A. Navigate to "Data Protection" setting in Google Admin Console's Device management section and disable the "Allow users to copy data to personal apps" checkbox.
- B. Disable "Open Docs in Unmanaged Apps" setting in Google Admin Console's Device management section.
- C. Navigate to Devices > Mobile and endpoints > Universal Settings > General and turn on Basic Mobile Management.
- D. Clear the "Allow items created with managed apps to open in unmanaged apps" checkbox.

Allow users to copy Google Workspace items to personal apps

Allows users to copy content from a Google app (such as Gmail, Drive, Docs, Sheets, Slides, Chat, and Meet) to a Google app in their personal account or a third-party app. Also allows users to drag content between Google apps, for any account.

To prevent users from copying or dragging information from their work account, or using the All inboxes feature (which combines messages from multiple Gmail accounts into one inbox), uncheck the box.

Your organization has enabled spoofing protection against unauthenticated domains. You are receiving complaints that email from multiple partners is not being received. While investigating this issue, you find that emails are all being sent to quarantine due to the configured safety setting. What should be the next step to allow users to review these emails and reduce the internal complaints while keeping your environment secure?

- A. Add your partner domains IPs to the Inbound Gateway setting.
- B. Change the spoofing protection to deliver the emails to spam instead of quarantining them.
- C. Add your partner sending IP addresses to an allowlist.
- D. Change the spoofing protection to deliver the emails to inboxes with a custom warning instead of quarantining them.

**Suggested Answer:** D

C: Users may complain that legitimate emails are landing in their spam folders, requiring them to manually move them to the inbox. Forcing over 10k users to create Gmail filters would be inconvenient. The best approach is to minimize the impact on the user experience.

Correct answer is - C :

\*\*I got wrong the past one, is not A\*\*

“Add IP addresses to allowlists in Gmail

Help prevent messages from certain IP addresses from being marked as spam by adding them to an email allowlist. Messages from these addresses won't be marked as spam by Gmail.

Email allowlists are always applied to your entire domain. You can't create email allowlists that apply to specific organizational units only.

IP addresses of your mail servers that are forwarding email to Gmail should be added to Inbound Gateway and not in IP allowlist"

<https://support.google.com/a/answer/60751?hl=en>

upvoted 4 times

🗲️ 👤 **AldoSan666** 1 year, 1 month ago

Correct answer is - A :

"Add IP addresses to allowlists in Gmail

🗲️ 👤 **jcloud965** 10 months, 3 weeks ago

It says multiple partners : adding them to allowlist is not a good solution

upvoted 2 times

🗲️ 👤 **[Removed]** 1 year, 1 month ago

**Selected Answer: A**

A is correct...Sending to spam isn't a viable option for employees who work constantly with the partners, custom warning doesnt keep the environment secure...allowlist doesnt override the quarantine feature but setting up inbound gateway does and it keeps the security configurations tight

upvoted 1 times

🗲️ 👤 **jcloud965** 10 months, 3 weeks ago

Employees can always mark these email as non spam

upvoted 2 times

🗲️ 👤 **wborquez** 1 year, 1 month ago

**Selected Answer: B**

<b>Quarantine action</b>: When you select Quarantine for any of the advanced security settings, the quarantine you select applies only to incoming messages. This is true even when the quarantine you select specifies actions to take on outgoing messages.

<Allowlist settings don't override the Quarantine option.

<b>Warning banners</b>: Warning banners (yellow box) appear only in Gmail web. <Third-party apps do not display a warning banner.

<b>Other spam settings</b>: These advanced security features work independently of other spam settings you might have previously turned on. For example, even if you've listed a domain as a safe sender in spam settings, the enhanced security features are still applied.

🗨️ **barksgw** 1 year, 6 months ago

**Selected Answer: B**

Messages that aren't authenticated with DMARC by the receiving server are sent to the recipient's spam folder. If the receiving mail server has the following options:  
~:text=Messages%20that%20aren%E2%80%99t%20authenticated%20with%20DMARC%20by%20the%20receiving%20server%20f  
upvoted 1 times

🗨️ **ssa1983** 1 year, 7 months ago

D is not correct because there is no custom warning  
C would keep the complaints ongoing  
A would still process those messages for spam/spoofing checks and thus quarantine them  
C is the only solution in my opinion  
upvoted 3 times

🗨️ **NadiaOne** 1 year, 7 months ago

The correct answer is B.  
The D one is not correct because it states "custom warning message": you cannot customize the warning message for the Advanced Phishing and Malware Protection section in the Admin console.  
upvoted 1 times

As the Workspace Administrator, you have been asked to delete a temporary Google Workspace user account in the marketing department. This user has created Drive documents in My Documents that the marketing manager wants to keep after the user is gone and removed from Workspace. The data should be visible only to the marketing manager. As the Workspace Administrator, what should you do to preserve this user's Drive data?

- A. In the user deletion process, select "Transfer" in the data in other apps section and add the manager's email address.
- B. Use Google Vault to set a retention period on the OU where the users reside.
- C. Before deleting the user, add the user to the marketing shared drive as a contributor and move the documents into the new location.
- D. Ask the user to create a folder under MyDrive, move the documents to be shared, and then share that folder with the marketing team manager.

The credentials of several individuals within your organization have recently been stolen. Using the Google Workspace login logs, you have determined that in several cases, the stolen credentials have been used in countries other than the ones your organization works in. What else can you do to increase your organization's defense-in-depth strategy?

- A. Implement an IP block on the malicious user's IPs under Security Settings in the Admin Console.
- B. Use Context-Aware Access to deny access to Google services from geo locations other than the ones your organization operates in.
- C. Enforce higher complexity passwords by rolling it out to the affected users.
- D. Use Mobile device management geo-fencing to prevent malicious actors from using these stolen credentials.

You are the Workspace administrator for an international organization with Enterprise Plus Workspace licensing. A third of your employees are located in the United States, another third in Europe, and the other third geographically dispersed around the world. European employees are required to have their data stored in Europe. The current OU structure for your organization is organized by business unit, with no attention to user location. How do you configure Workspace for the fastest end user experience while also ensuring that European user data is contained in Europe?

- A. Configure a data region at the top level OU of your organization, and set the value to "Europe".
- B. Add three additional OU structures to designate location within the current OU structure. Assign the corresponding data region to each.
- C. Configure a configuration group for European users, and set the data region to "Europe".
- D. Configure three configuration groups within your domain. Assign the appropriate data regions to each corresponding group, but assign no preference to the users outside of the United States and Europe.

Tried to pass this exam 2 weeks ago.

I learned all 95 questions and answers and selected them during exam.

Not passed.

About 80% was from VCE Exam Simulator.

I checked all questions here and they are the same like in VCE with the same answers.

Seems need to use answers that voted by people, nor provided by system.

upvoted 3 times

 **Odissey\_** 9 months, 1 week ago

Hello! I'm sad to hear that you didn't pass the exam because it's waiting for me tomorrow, but I immediately noticed that the system usually gives incorrect answers, so I read all the discussions and remember them exclusively. And in general, what can you say in terms of complexity? Thank you in advance)

upvoted 1 times

 **Aj\_yan** 9 months ago

In general, the exam is not difficult, and all 95 questions that are available can be studied with answers in a couple of days.

The main thing is that the answers are correct))).

Did you pass exam?

upvoted 1 times

 **capilona2** 9 months ago

How was your exam? Can you tell us anything on the questions and the answers the system offers?

upvoted 1 times

 **Aj\_yan** 9 months ago

in the exam, about 70% of the questions were exactly the same as what we see here

and the order of answers was the same

I purchased Contributor access for 1 month and am now studying the most voted answers.

I think this is the best site for exam preparation.

upvoted 4 times

🗨️ 👤 **examprof** 9 months ago

@Aj\_yan can you please confirm that the QUESTIONS and ALTERNATIVES are the same found here? I'm deeply sorry for your failure. I understand your point and have seen several people here complaining about the inaccuracy of system-generated answers and recommending them to be removed at all. The contributors' most voted answers are the ones to be considered.

C Because The current OU structure for your organization is organized by business unit, with no attention to user location.  
upvoted 1 times

🗨️ 👤 **topnode2023** 1 year ago

**Selected Answer: A**

Less latency if everyone's data is in the same region - "Europe".  
upvoted 1 times

🗨️ 👤 **Steventjie** 1 year ago

**Selected Answer: A**

The reason why this probably is A is because, the question indicates that where the data is stored for the non-European employees is irrelevant, thus you might as well change everybody's data to be kept in Europe. No need for OU configuration additions or changes, that's the simplest route.  
upvoted 2 times

🗨️ 👤 **[Removed]** 1 year, 1 month ago

**Selected Answer: A**

Selecting a specific region doesn't provide performance improvements or fine-tuning for your network or data access. Take the following factors into consideration before making your decision:

Users outside the region where their data is located might experience higher latency in some cases. Latency could happen while:

Editing shared objects in real time across regions

Sharing files, such as documents, with someone outside the user's region

Traveling internationally

From rjrf503 link...so for the fastest user experience the data region should just be europe for the entire organization

As a team manager, you need to create a vacation calendar that your team members can use to share their time off. You want to use the calendar to visualize online status for team members, especially if multiple individuals are on vacation. What should you do to create this calendar?

- A. Request the creation of a calendar resource, configure the calendar to "Auto-accept invitations that do not conflict," and give your team "See all event details" access.
- B. Create a secondary calendar under your account, and give your team "Make changes to events" access.
- C. Request the creation of a calendar resource, configure the calendar to "Automatically add all invitations to this calendar," and give your team "See only free/busy" access.
- D. Create a secondary calendar under your account, and give your team "See only free/busy" access.

**Suggested Answer: C**

**Selected Answer: B**

I have been a Google Workspace Administrator / Deployment for about 7 years lol so I can guarantee you option A and C are not right, Calendar Resource is not intended for this purpose, so we are left with option B or D, the only difference between both is to allow members to make changes or not so according to the question "You need a Vacation Calendar that your team members can use to share their time off" meaning they will need editing permissions to the Calendar, meaning? the only viable option is B.

Also if you need documentation, here is the article, mentioning "Track team members' vacations schedules and business trip dates.":

Your Finance team has to share quarterly financial reports in Sheets with an external auditor. The external company is not a Workspace customer and allows employees to access public sites such as Gmail and Facebook. How can you provide the ability to securely share content to collaborators that do not have a Google Workspace or consumer (Gmail) account?

- A. Allow external sharing with the auditor using the 'Trusted Domains' feature.
- B. Enable the 'Visitor Sharing' feature, and demonstrate it to the Finance team.
- C. Use the 'Publish' feature in the Sheets editor to share the contents externally.
- D. Attach the Sheet file to an email message, and send to the external auditor.

Think on the case; The case is a Financial Team, sharing with an external Finance AUDITOR.

The regular figure to share for auditions (more if are finance) is to share "local" files, not collaboration files even if they have Google Accounts. So i think for this case, indeed the proper and most realistic workflow will include the attachment

Visitor Sharing is ok so B seems correct,  
upvoted 2 times

Your organization has noticed several incidents of accidental oversharing inside the organization. Specifically, several users have shared sensitive Google Drive items with the entire organization by clicking 'anyone in this group with this link can view'. You have been asked by senior management to help users share more appropriately and also to prevent accidental oversharing to the entire organization. How would you best accomplish this?

- A. Create groups, add users accordingly, and educate users on how to share to specific groups of people.
- B. Disable sharing to the entire organization so that users must consciously add every person who needs access.
- C. Determine sharing boundaries for users that work with sensitive information, and then implement target audiences.
- D. Temporarily disable the Google Drive service for individuals who continually overshare.

**Suggested Answer: B**

C. Determine sharing boundaries for users that work with sensitive information, and then implement target audiences.

upvoted 1 times

🗳️ **Stiflersammy** 1 year ago

Accident can happen if you don't educate. I will go with A since the best way to share is by creating groups the need those confidential document. e.g maybe for Finance, there whould be a finance group and so on.

upvoted 1 times

🗳️ **Jane1234YIP** 1 year, 1 month ago

**Selected Answer: A**

A is correct

Option A involves creating groups based on user roles or departments and then educating users on how to share with those specific groups instead of sharing with "anyone in this group with this link can view." By using groups, users can share items with relevant teams or individuals more easily and reduce the risk of accidental oversharing to the entire organization.

upvoted 2 times

🗳️ **[Removed]** 1 year, 1 month ago

**Selected Answer: A**

the question said "users" meaning the entire organization ...not paying attention to only those who handle sensitive information... C is wrong because it only addresses users who handle sensitive info...what about the rest of the users? they can go ahead and overshare?

upvoted 2 times

  **danaracena** 1 year, 1 month ago

Also answered C. But the key in the question es "PREVENT ACCIDENTALLY SHARING". If you educate, still youre not preventing accidents. The only option that fulfill that requirement is B.

upvoted 1 times

  **[Removed]** 1 year, 2 months ago

Correct answer is A... Users will now be sharing appropriately, and on top of that they'll be educated

  **jaxclain** 1 year, 9 months ago

**Selected Answer: C**

Whoever is elaborating the questions, is not good lol  
I will have to say C because is the only option that make sense of the other 3...

upvoted 4 times

  **RAZKZ** 1 year, 9 months ago

B- Does not help users share more appropriately.  
C - Does not prevent them from oversharing.

Correct me if i'm wrong, some of these questions are sending me, I don't see an actual correct answer to the question here.

upvoted 2 times

  **Eagles215Philly** 1 year ago

B Does help users to share more apporpriately. They will need to instead of giving the whole org access, they will have to give individuals or groups access. It reduces oversharing as well.

upvoted 1 times

  **RAZKZ** 1 year, 9 months ago

Why does the question say "prevent" oversharing, C does not prevent them, it reduces the chance of it happening...

upvoted 1 times

  **Willem\_M** 1 year, 8 months ago

It says "prevent ACCIDENTAL oversharing" so I think they mean, if the default is not "share with everyone" and you still go to find the option to share with the entire organisation, it is not accidental? So C would be good enough I think.

upvoted 2 times

  **Eagles215Philly** 1 year ago

I believe though diasbling sharing to the whole org would in fact make people think who they need to give access to. Hence I think B would do the job.

upvoted 1 times

You are a Workspace Administrator with a mix of Business Starter and Standard Licenses for your users. A Business Starter User in your domain mentions that they are running out of Drive Storage Quota. Without deleting data from Drive, what two actions can you take to alleviate the quota concerns for this user? (Choose two.)

- A. Add other users as "Editors" on the Drive object, thus spreading the storage quota debt between all of them.
- B. Manually export and back up the data locally, and delete the affected files from Drive to alleviate the debt.
- C. Make another user the "Owner" of the Drive objects, thus transferring the storage quota debt to them.
- D. Perform an API query for large storage drive objects, and delete them, thus alleviating the quota debt.
- E. Move the affected items to a Shared Drive. Shared Drives transfer ownership of the drive item to the domain itself, which alleviates the quota debt from that user.

🗨️ **userX100** 1 year, 5 months ago

**Selected Answer: CE**

C and E are correct

upvoted 1 times

🗨️ **raquint** 1 year, 8 months ago

**Selected Answer: BC**

E is not because of permissions in Drive. Changing editors won't change storage.

upvoted 2 times

🗨️ **Diani** 1 year, 7 months ago

The B can't be because it says "Without deleting data from the drive"

upvoted 2 times

🗨️ **Moss2011** 1 year, 8 months ago

I think is B and C because a Business Starter only have "viewer" option to a Share Drive

upvoted 2 times

🗨️ **raquint** 1 year, 8 months ago

This is 100% correct. Starter users cannot use Shared Drive. Only as viewers

upvoted 1 times

🗨️ **Mosie23** 1 year, 3 months ago

However, if a file in a shared drive is shared with them directly, then they may also be allowed to comment or edit the file.

upvoted 1 times

🗨️ **jaxclain** 1 year, 9 months ago

**Selected Answer: CE**

I agree as well C and E. But there is something wrong about C, it doesn't specify the license of the new owner but is a typical Google question (they are really bad generating these questions lol).

upvoted 3 times

🗨️ **Willem\_M** 1 year, 9 months ago

**Selected Answer: CE**

Only answers without deletion of data

upvoted 1 times

🗨️ **jamesitexpert** 1 year, 9 months ago

B Starter users only have Viewer privileges tho

upvoted 2 times

Your organization is preparing to deploy Workspace and will continue using your company's existing identity provider for authentication and single sign-on (SSO). In order to migrate data from an external system, you were required to provision each user's account in advance. Your IT team and select users (~5% of the organization) have been using Workspace for configuration and testing purposes. The remainder of the organization can technically access their accounts now, but the IT team wants to block their access until the migrations are complete. What should your organization do?

- A. Remove Google Workspace license to prevent users from accessing their accounts now.
- B. Suspend users that the organization does not wish to have access.
- C. Add the users to the OU with all services disabled.
- D. Use Context-Aware Access to simultaneously block access to all services for all users and allow access to all services for the allowed users.

**Suggested Answer: B**

  **Rafaelbsa** 1 year, 7 months ago

Como os dados precisarem ser migrados, as contas de usuário não podem ser desativadas nem suspensas. Sendo assim não é possível desativar os serviços, por esse motivo com certeza a resposta correta é D.  
upvoted 2 times

  **RAZKZ** 1 year, 9 months ago

Selected Answer: C

Definitely C, presented in deployment course from Google for GWS Admin.  
upvoted 2 times

  **jaxclain** 1 year, 9 months ago

Selected Answer: C

You don't need to complicate things using Context-aware Access just for this lol, context aware access purpose is something totally different, they just want to prevent users from using the services until the migration is done, simply create an OU, add them to it, disable the services and thats it.  
upvoted 4 times

  **jaxclain** 1 year, 8 months ago

I have reviewed this question more and just realized that suspended accounts cannot be migrated, both source and destination needs to be active, on this case the migration is external so the destination GW acc needs to be active...  
<https://support.google.com/workspacemigrate/answer/9991417?hl=en#:~:text=Both%20source%20and%20target%20Google,accounts%20can't%20be%20migrated.>

So... I could not find anywhere what happens if Gmail is disabled, not sure if the IMAP access will be disabled as well so I assume it will be similar to a suspended account... meaning the correct answer is D?? context aware access?? lol wow I am lost here... if someone can confirm if IMAP access is still available even if Gmail is disabled?

upvoted 2 times

  **jdosh** 1 year, 2 months ago

you're correct it's supposed to be D. you cannot migrate to suspended and disabled service users.

Your company has acquired a new company in Japan and wants to add all employees of the acquisition to your existing Google Workspace domain. The new company will retain its original domain for email addresses and, due to the very sensitive nature of its work, the new employees should not be visible in the global directory. However, they should be visible within each company's separate directory. What should you do to meet these requirements?

- A. Create a new Google Workspace domain isolated from the existing one, and create users in the new domain instead.
- B. Under Directory Settings > Contact sharing, disable the contact sharing option and wait for 24 hours to allow the settings to propagate before creating the new employee accounts.
- C. Redesign your OU organization to have 2 child OUs for each company directly under the root. In Directory Settings > Visibility Settings, define custom directories for each company, and set up Visibility according to the OU.
- D. Create one dynamic group for each company based on a custom attribute defining the company. In Directory Settings > Visibility Settings, define custom directories for each company, and set up Visibility according to the dynamic group.

You are in the middle of migrating email from on-premises Microsoft Exchange to Google Workspace. Users that you have already migrated are complaining of messages from internal users going into spam folders. What should you do to ensure that internal messages do not go into Gmail spam while blocking spoofing attempts?

- A. Train users to click on Not Spam button for emails.
- B. Add all users of your domain to an approved sender list.
- C. Force TLS for your domain.
- D. Ensure that your inbound gateway is configured with all of your Exchange server IP addresses.

**Suggested Answer:** B

Community vote distribution

D (89%) 11%

🗳️ 👤 **jaxclain** Highly Voted 👍 1 year, 9 months ago

**Selected Answer: D**

This is very tricky because D is also correct, I have done migrations from On Premises before and you can switch the MX records pointing to Google, configure the Inbound Gateway to make sure emails are not mark as spam and that's it but also B would work.

I will vote for D because I saw the Deployment Videos from Google and as best practice to migrate from On Premises, they do recommend to do it as I mentioned so I assume they are refering this question to that part of the Google guide. Also the question is not clear if the MX records are pointing to Google, I would assume they are so yeah, I would go for D lol  
upvoted 5 times

Selected Answer: B

Correct answer - B

Approved senders list—Approved senders are trusted users that send email to your organization. Create an address list of approved senders so messages from these users bypass Gmail's spam filters, and recipients can decide whether they are spam or not. Create the list with individual email addresses, or by adding an entire domain.

upvoted 2 times

A user is reporting that after they sign in to Gmail, their labels are not loading and buttons are not responsive. What action should you take to troubleshoot this issue with the user?

- A. Collect full message headers for examination.
- B. Check whether the issue occurs when the user authenticates on a different device or a new incognito window.
- C. Check whether a ping test to service.gmail.com (pop.gmail.com or imap.gmail.com) is successful.
- D. Check whether traceroute to service.gmail.com (pop.gmail.com or imap.gmail.com) is successful.

As the newly hired Admin in charge of Google Workspace, you learn that the organization has been using Google Workspace for months and has configured several security rules for accessing Google Drive. A week after you start your role, users start to complain that they cannot access Google Drive anymore from one satellite office and that they receive an error message that “a company policy is blocking access to this app.” The users have no issue with Gmail or Google Calendar. While investigating, you learn that both this office's Internet Service Provider (ISP) and the global IP address when accessing the internet were changed over the weekend. What is the most logical reason for this issue?

- A. An access level was defined based on the IP range and applied to Google Drive via Context-Aware Access.
- B. Under Drive and Docs > Sharing Settings, the “Whitelisted domains” list needs to be updated to add the new ISP domain.
- C. The Network Mask defined in Security > Settings > SSO with 3rd Party IdPs should be updated to reflect the new IP range.
- D. You need to raise a ticket to Google Cloud Support to have your new IP ranges registered for Drive API access.

An end user informs you that they are having issues receiving mail from a specific sender that is external to your organization. You believe the issue may be caused by the external entity's SPF record being incorrectly configured. Which troubleshooting step allows you to examine the full message headers for the offending message to determine why the messages are not being delivered?

- A. Use the Postmaster Tools API to pull the message headers.
- B. Use the Email Log Search to directly review the message headers.
- C. Use the Security Investigation Tool to review the message headers.
- D. Perform an SPF record check on the domain to determine whether their SPF record is valid.

**Suggested Answer: D**

Community vote distribution

qtDirk 4 months ago

C - in the email log search you only get Message details and recipient details. On the investigation tool you get the Raw Headers.  
upvoted 1 times

Nico282 9 months ago

**Selected Answer: C**

The Security investigation Tool shows the full message headers, including SPF, DKIM and DMARC. Checked on the Admin console.

Aren't we not even receiving the mail? how would you search for it on our side in the admin console?

upvoted 3 times

You have been asked to support an investigation that your litigation team is conducting. The current default retention policy for mail is 180 days, and there are no custom mail retention policies in place. The litigation team has identified a user who is central to the investigation, and they want to investigate the mail data related to this user without the user's awareness. What two actions should you take? (Choose two.)

- A. Move the user to their own Organization Unit, and set a custom retention policy.
- B. Create a hold on the user's mailbox in Google Vault.
- C. Reset the user's password, and share the new password with the litigation team.
- D. Copy the user's data to a secondary account.
- E. Create a matter using Google Vault, and share the matter with the litigation team members.

A recent legal investigation requires all emails and Google Drive documents from a specific user to be retrieved. As the administrator, how can you fulfill the legal team's request?

- A. Use Security Investigation Tool to Search Google Drive events for all of the user's documents, and use Google Admin > Reports > Email Log Search to find their emails.
- B. Search Google Drive for all of the user's documents, and ask them to forward all of their emails.
- C. Use the Gmail API and Google Drive API to automatically collect and export data.
- D. Utilize Google Vault to hold, search, and export data of interest.

**Suggested Answer:** A

Community vote distribution

D (100%)

🗳️ **jaxclain** Highly Voted 1 year, 9 months ago

**Selected Answer: D**

D is the correct answer for sure, just keep in mind that Vault will not export folders / labels, just raw data so for emails, you need to look at the header to see if the email belongs to a label or if it was sent, received, deleted, etc... This is why Vault is not recommended for doing Backups but analyzing the 4 options here, A will not work, B is too exhausting, C will work but you will need a 3rd party app or something like Google Workspace Migrate but that service is only for Enterprise companies so the only option left is D lol

Your company's Google Workspace primary domain is "mycompany.com," and it has acquired a startup that is using another cloud provider with a domain named "mystartup.com." You plan to add all employees from the startup to your Google Workspace domain while preserving their current mail addresses. The startup CEO's email address is andrea@mystartup.com, which also matches your company CEO's email address as andrea@mycompany.com, even though they are different people. Each must keep the usage of their email. In addition, your manager asked to have all existing security policies applied for the new employees without any duplication. What should you do to implement the migration?

- A. Create a secondary domain, mystartup.com, within your current Google Workspace domain, set up necessary DNS records, and create all startup employees with the secondary domain as their primary email addresses.
- B. Create an alias domain, mystartup.com, in your existing Google Workspace domain, set up necessary DNS records, and create all startup employees with the alias domain as their primary email addresses.
- C. Create a new Google Workspace domain with "mystartup.com," and create a trust between both domains for reusing the same security policies and sharing employee information within the companies.
- D. Create the startup employees in the "mycompany.com" domain, and add a number at the end of the user name whenever there is a conflict. In Gmail > Routing, define a specific route for the OU that targets the startup employees, which will modify the email address domain to "mystartup.com," and remove any numbers previously added. In addition, confirm that the SPF and DKIM records are properly set.

Answer is D

<https://support.google.com/a/answer/9520714?fl=1>

upvoted 4 times

Your company recently acquired an organization that was not leveraging Google Workspace. Your company is currently using Google Cloud Directory Sync (GCDS) to sync from an LDAP directory into Google Workspace. You want to deploy a second instance of GCDS and apply the same strategy with the newly acquired organization, which also has its users in an LDAP directory. How should you change your GCDS instance to ensure that the setup is successful? (Choose two.)

- A. Provide your current GCDS instance with admin credentials to the recently acquired organization's LDAP directory.
- B. Add an LDAP sync rule to your current GCDS instance in order to synchronize new users.
- C. Set up exclusion rules to ensure that users synced from the acquired organization's LDAP are not, suspended.
- D. Set up an additional instance of GCDS running on another server, and handle the acquired organization's synchronization.
- E. Upgrade to the multiple LDAP version of GCDS.

**Suggested Answer:** AD

Community vote distribution

CD (100%)

 **RJRF503** Highly Voted 1 year, 9 months ago

**Selected Answer:** CD

Correct answer - C & D

<https://support.google.com/a/answer/7177266?hl=en#zippy=%2Ccan-i-sync-gcgs-from-multiple-ldap-directories>

GCDS can only sync from a single LDAP directory. If you have multiple LDAP directories, it is recommended that you consolidate your LDAP server data into a single directory.

You need to run 2 separate GCDS instances while creating exclusion rules to prevent suspensions/deletions.

upvoted 7 times

 **Nico282** Most Recent 8 months, 4 weeks ago

**Selected Answer:** CD

Explanation for the exclusion rule from <https://support.google.com/a/answer/7177266> :

Why is my Google Workspace user account being suspended after I run GCDS?

If a Google Workspace user account is suspended after running GCDS, you will receive an error explaining why this happened. In order to avoid repeating the particular error on any subsequent syncs, you can implement one of the following solutions depending on the cause of the problem:

Problem: The user doesn't exist on the LDAP server.

Solution: Since the user doesn't exist on the LDAP server, the customer should set a Google user exclusion rule to prevent GCDS from suspending this user in Google Workspace.

upvoted 1 times

 **virat\_kohli** 10 months, 1 week ago

**Selected Answer:** CD

C. Set up exclusion rules to ensure that users synced from the acquired organization's LDAP are not suspended.

D. Set up an additional instance of GCDS running on another server, and handle the acquired organization's synchronization.

upvoted 1 times

 **Gomesallef** 11 months, 1 week ago

**Selected Answer:** CD

Resposta correta - C e D <https://support.google.com/a/answer/7177266?hl=en#zippy=%2Ccan-i-sync-gcgs-from-multiple-ldap-directories> O GCDS só pode sincronizar de um único diretório LDAP. Se você tiver vários diretórios LDAP, é recomendável consolidar os dados do servidor LDAP em um único diretório. Você precisa executar duas instâncias separadas do GCDS ao criar regras de exclusão para evitar suspensões/exclusões.

upvoted 1 times

 **amministrazione** 11 months, 3 weeks ago

C. Set up exclusion rules to ensure that users synced from the acquired organization's LDAP are not, suspended.

D. Set up an additional instance of GCDS running on another server, and handle the acquired organization's synchronization.

upvoted 1 times

  **denHuw** 1 year, 4 months ago

**Selected Answer: CD**

GCDS can only authenticate a single admin, so the answer A is completely wrong.

upvoted 1 times

  **jaxclain** 1 year, 9 months ago

**Selected Answer: CD**

C and D are correct, first you need to add the exclusion rules on the first GCDS instance to avoid suspensions of newly provisioned users from the second GCDS instance. Then just setup the second GCDS instance in the acquired organization, it will provision and sync those users and those newly provisioned users wont be suspended by the first instance :)

upvoted 3 times

A user reached out to the IT department about a Google Group that they own: info@company.com. The group is receiving mail, and each message is also delivered directly to the user's Gmail inbox. The user wants to be able to reply to messages directly from Gmail and have them sent on behalf of the group, not their individual account. Currently, their replies come from their individual account. What would you instruct the user to do?

- A. Create a new content compliance rule that matches the user's outgoing messages with the group copied, and have it modify the sender to be the group address.
- B. Add the group as an email address that can be sent from within Gmail, and verify that the user has access. They can then choose to reply from the group.
- C. Add the user's individual account as a delegate to the group's inbox. They can then toggle between the accounts and use the Gmail interface on behalf of the group.
- D. Set the group address to be the default sender within the group's posting policies.

upvoted 1 times

Your organization recently deployed Google Workspace. Your admin team has been very focused on configuring the core services for your environment, which has left you little time to pay attention to other areas. Your security team has just informed you that many users are leveraging unauthorized add-ons, and they are concerned about data exfiltration. The admin team wants you to cut off all add-ons access to Workspace data immediately and block all future add-ons until further notice. However, they approve of users leveraging their Workspace accounts to sign into third-party sites. What should you do?

- A. Modify your Marketplace Settings to block users from installing any app from the Marketplace.
- B. Set all API services to "restricted access" and ensure that all connected apps have limited access.
- C. Remove all client IDs and scopes from the list of domain-wide delegation API clients.
- D. Block each connected app's access.

**Suggested Answer: C***Community vote distribution*

B (72%)

C (28%)

🗳️ 👤 **05fe736** 2 months, 2 weeks ago

"Cut off and block all future add-ons" is different to "restricted / limited access".

upvoted 1 times

🗳️ 👤 **virat\_kohli** 10 months, 1 week ago

**Selected Answer: B**

B. Set all API services to "restricted access" and ensure that all connected apps have limited access.

upvoted 1 times

🗳️ 👤 **Cert1Magic2** 10 months, 3 weeks ago

Question says "The admin team wants you to cut off all add-ons access to Workspace data immediately and block all future add-ons until further notice" then why not C, why we will put in restricted access rather than totally cutting it off.

upvoted 2 times

🗳️ 👤 **Gomesallef** 11 months, 2 weeks ago

**Selected Answer: B**

B está correto. Ao definir todos os serviços de API como "acesso restrito", você pode limitar efetivamente o acesso que os aplicativos conectados têm aos dados do Google Workspace. Isso ajuda a resolver as preocupações de segurança levantadas pela sua equipe de segurança em relação a complementos não autorizados e possível exfiltração de dados. Você pode revisar e configurar as permissões concedidas a cada aplicativo conectado para garantir que eles tenham acesso limitado apenas aos dados e funcionalidades necessários.

upvoted 1 times

🗳️ 👤 **amministrazione** 11 months, 3 weeks ago

B. Set all API services to "restricted access" and ensure that all connected apps have limited access.

upvoted 1 times

🗳️ 👤 **Jane1234YIP** 1 year, 1 month ago

**Selected Answer: B**

B is correct

By setting all API services to "restricted access," you can effectively limit the access that connected apps have to your Google Workspace data. This helps address the security concerns raised by your security team regarding unauthorized add-ons and potential data exfiltration. You can review and configure the permissions granted to each connected app to ensure they have limited access only to the necessary data and functionality.

upvoted 2 times

🗳️ 👤 **juuhcsr1** 1 year, 1 month ago

**Selected Answer: B**

Option C would remove all client IDs and scopes from the list of domain-wide delegation API clients, which would prevent all connected apps from accessing Workspace data. However, this would also prevent users from signing into third-party sites with their

Workspace accounts.

upvoted 2 times

🗨️ 👤 **[Removed]** 1 year, 2 months ago

D is the answer

upvoted 1 times

🗨️ 👤 **jdosh** 1 year, 3 months ago

**Selected Answer: B**

B is the answer because if you don't set the API to restricted then the users will just use new and other add-ons after you do letter c  
upvoted 1 times

🗨️ 👤 **karl19** 1 year, 3 months ago

**Selected Answer: B**

B. Set all API services to "restricted access" and ensure that all connected apps have limited access.

By setting API services to "restricted access," you can control the access and permissions granted to third-party apps and add-ons. This allows you to review and manage the level of access each app has to Workspace data. Additionally, ensuring that all connected apps have limited access helps minimize the risk of data exfiltration or unauthorized data access.

This approach allows users to continue leveraging their Workspace accounts to sign into third-party sites while maintaining control over the add-ons and their access to Workspace data.

upvoted 4 times

🗨️ 👤 **pid** 1 year, 6 months ago

Not an answer to this question but there is a new option in settings of Gsuite which will easily satisfy this need - Allow users to access third-party apps that only ask for Google sign-in info

upvoted 3 times

🗨️ 👤 **muteto** 1 year, 8 months ago

**Selected Answer: C**

I think the keyword here is "immediately", but want to hear your comments as well?

upvoted 1 times

🗨️ 👤 **MC2442** 1 year, 8 months ago

**Selected Answer: B**

This must be B; the limited element ensures the Google Sign-in can still be used and the restriction prevents the add-ons to use company data.

upvoted 1 times

🗨️ 👤 **jaxclaim** 1 year, 8 months ago

**Selected Answer: C**

I would say C because the option B is not clear, there is an option to block all third party APIs in the Admin Console > APIs section but is not listed here and API services to "restricted access" is not clear because it says that all connected apps have limited access..

Your IT team is being asked to fulfill a query by your organization's legal department that requires an MBOX file that will be shared to a third-party partner for eDiscovery. The query must be run on multiple users. Legal has no admin rights to Google Vault. What should you do to fulfil the request?

- A. Create a Google Vault matter for each user account, and share the matters to the legal admin.
- B. Create a Google Vault matter, search for data, and run an export for the legal department.
- C. Use the Investigation Tool to search for the data requested, and export for the legal department.
- D. Search for the data in Gmail, and export for the legal department.

**Suggested Answer:** B

**Selected Answer: B**

To fulfill the request from the legal department for an MBOX file that will be shared with a third-party partner for eDiscovery, and considering that the legal department has no admin rights to Google Vault, the recommended approach is:

B. Create a Google Vault matter, search for data, and run an export for the legal department.

Explanation:

Creating a Google Vault matter (option B) allows you to specify the scope of the search and export for multiple user accounts. You can define the search criteria based on the query from the legal department and run the export to generate an MBOX file containing the relevant data.

Google Vault provides advanced search capabilities and ensures the preservation and integrity of the data during the eDiscovery process. It is designed specifically for legal and compliance needs, making it the appropriate tool for this scenario.

C. Configure the security sandbox feature on the sales team organizational unit.  
upvoted 1 times

🗨️ **Steventjie** 1 year ago

Selected Answer: A

So it's fine for the sales team to never ever receive any attachments via email? I'm certain there would be plenty valid circumstances where they would need to receive attachments via email, A makes the most sense to me tbh.  
upvoted 1 times

🗨️ **danaracena** 1 year, 1 month ago

Selected Answer: C

Says they are PRONE to receive malicious attachments, so we are not looking to block all of them. Says also that is required an ADDITIONAL layer of security, and also NOT DISRUPT THE BUSINESS OPERATION ... Option B doesnt fulfill any of the requirements. Is a drastic solution, doesnt discriminate and impacts the business.  
upvoted 3 times

🗨️ **Bardapapa** 1 year, 2 months ago

the security sandbox feature doesn't work for all licences types. So C is not the correct answer.  
upvoted 1 times

🗨️ **karl19** 1 year, 3 months ago

Selected Answer: C

By enabling the security sandbox feature, attachments that are flagged as potentially harmful can be opened and examined within a controlled environment. This helps to mitigate the risk of malware or other malicious content affecting the user's system.  
upvoted 1 times

🗨️ **pid** 1 year, 6 months ago

Selected Answer: C

I don't know how Sales will be able to get non- threatening attachments if they are stripped and sent to quarantine. Admin will have to forward one by one. Security sandbox makes more sense

upvoted 2 times

🗨️ 👤 **jaxclain** 1 year, 9 months ago

**Selected Answer: C**

I agree, answer should be Security Sandbox (C) but there is already another question with Security Sandbox so this is confusing lol but for sure it has to be Security Sandbox, makes no sense to send the email to a quarantine so the admin can open it? the security sandbox will scan the file in a secure zone so it is way better.

D: Create a configuration group with the approved users as members and enable external sharing for this group.

By creating a configuration group and adding the approved users as members, you can apply specific settings and permissions to that group. In this case, you would enable external sharing specifically for this group, allowing the members of the marketing and sales teams to share documents with external customers, prospects, and partners.

This approach ensures that only the approved users have the ability to share externally, while the rest of the organization remains

restricted from external sharing. It provides a granular level of control and allows you to manage external sharing permissions for specific groups or individuals.

D. Let users share files between the two companies by using the 'Trusted Domains' feature. Create an allowlist of the trusted domains, and choose sharing settings for the users.

upvoted 1 times

🗳️ 👤 **[Removed]** 1 year, 2 months ago

**Selected Answer: B**

Create a Drive Data Loss Prevention policy that will allow sharing to only domains on an allowlist.

upvoted 1 times

🗳️ 👤 **karl19** 1 year, 3 months ago

**Selected Answer: D**

Option D: Let users share files between the two companies using the 'Trusted Domains' feature. Create an allowlist of the trusted domains and choose sharing settings for the users.

By using the 'Trusted Domains' feature, you can specify the domains that are allowed for external sharing while restricting sharing with other domains. This allows users from the newly acquired companies to share files and collaborate with your organization, while still maintaining strict restrictions on general external content sharing.

This approach provides a controlled and secure environment for sharing files between the two organizations, as the sharing is limited to the trusted domains specified in the allowlist.

B. Confirm that the Work Insights app is turned ON for all employees.

upvoted 1 times

🗳️ **[Removed]** 1 year, 1 month ago

**Selected Answer: C**

the error being highlighted suggests a restriction issue

upvoted 1 times

🗳️ **jdosh** 1 year, 3 months ago

**Selected Answer: B**

B is correct, work insight is not in the app access control so you cannot set it to restricted or unrestricted.

upvoted 3 times

🗳️ **karl19** 1 year, 3 months ago

**Selected Answer: B**

Option B, "Confirm that the Work Insights app is turned ON for all employees," would indeed be the appropriate step to take in this scenario. By ensuring that the Work Insights app is enabled for all employees, you are allowing them to access and use the app to analyze adoption data for Google Workspace. Enabling the app ensures that all necessary permissions and access are granted for Work Insights functionality.

upvoted 1 times

🗳️ **Moss2011** 1 year, 8 months ago

**Selected Answer: B**

The answer is B because there is no Work Insights (only available in the Enterprise Plus Edition) API inside the given path

upvoted 4 times

🗨️ 👤 **hehe\_24** 1 year, 8 months ago

Security > access and data control > api control > app access control > work insights api not found under manage google services.

So I will go with option B.

upvoted 3 times

🗨️ 👤 **hehe\_24** 1 year, 8 months ago

Note that I have enterprise plus license in test env

upvoted 1 times

🗨️ 👤 **jaxclain** 1 year, 9 months ago

**Selected Answer: C**

C is correct, the options A and D makes no sense, with option B we have to assume that Work Insights is already on and this is why they get the error so just make sure from the API is set to unrestricted.

🗨️ 👤 **RAZKZ** 1 year, 9 months ago

I can't even find work insights under App access control in security under managed services.

upvoted 1 times

🗨️ 👤 **jaxclain** 1 year, 9 months ago

Maybe you don't have the correct License but C is correct.

upvoted 2 times

🗨️ 👤 **jdosh** 1 year, 3 months ago

Nope, work insight is not in the app access control we are on Enterprise Plus buddy.

upvoted 1 times

You received this email from the head of marketing:

Hello Workspace Admin:

Next week, a new consultant will be starting on the "massive marketing mailing" project. We want to ensure that they can view contact details of the rest of the marketing team, but they should not have access to view contact details of anyone else here at our company. Is this something that you can help with?

What are two of the steps you need to perform to fulfill this request? (Choose two.)

- A. Create an isolated OU for the consultants who need the restricted contacts access.
- B. Create a group that includes the contacts that the consultant is allowed to view.
- C. Apply the role of owner to the consultant in the group settings.
- D. Create the consultant inside under the marketing OU.
- E. Ensure that you have the Administrator Privilege of Services > Services settings and that Services > Contacts > Contacts Settings Message is set.

**Suggested Answer: B,E**

AB (100%)

🗨️ **virat\_kohli** 10 months, 1 week ago

**Selected Answer: AB**

- A. Create an isolated OU for the consultants who need the restricted contacts access.
  - B. Create a group that includes the contacts that the consultant is allowed to view.
- upvoted 1 times

🗨️ **jdosh** 1 year, 2 months ago

**Selected Answer: AB**

A and B are the only things that make sense.

upvoted 1 times

🗨️ **karl19** 1 year, 3 months ago

**Selected Answer: AB**

Option A: Create an isolated OU for the consultants who need restricted contacts access: By creating a separate organizational unit (OU) specifically for the consultants, you can apply different access policies and permissions to that OU. This allows you to control the visibility of contact details for the marketing team while restricting access to other company contacts.

Option B: Create a group that includes the contacts the consultant is allowed to view: Create a group specifically for the marketing team contacts that the consultant should be able to access. Add the relevant marketing team members to this group. By granting access to this group, the consultant will be able to view the contact details of the marketing team members.

Please note that options C, D, and E are not directly related to fulfilling the request mentioned in the email and are not necessary for achieving the desired outcome.

You mentioned A/B, but also B/D.

I'm also quite confused on this question, you need the permissions but you also need to create OU & Group, which one is it?

upvoted 1 times

🗨️ 👤 **impearl** 1 year, 9 months ago

B, D

<https://support.google.com/a/answer/7566446?hl=en&fl=1>

upvoted 4 times

🗨️ 👤 **jdosh** 1 year, 2 months ago

D is wrong, you will restrict all the marketing OU users from seeing the other users in the domain if you do that.

upvoted 2 times

A disgruntled employee has left your company and deleted all their email messages and files in Google Drive. The security team is aware that some intellectual property may have surfaced on a public social media site. What is the first step to start an investigation into this leak?

- A. Delete the user's account in the Admin Console.
- B. Transfer data between end user Workspace accounts.
- C. Instruct a Google Vault admin to create a matter, and place all the user data on 'hold.'
- D. Use Google Vault to export all the user data and share among the security team.

**Suggested Answer:** D

Community vote distribution

C (100%)

🗳️ 👤 **jaxclain** Highly Voted 👍 1 year, 9 months ago

**Selected Answer:** C

If it was me, I would just search for the users data then share it with the security team.

If there is not any retention policy applied then yes a Hold but most companies have Vault retention to indefinite so there is no need to use a Hold but for this question (bad elaborated) then yes, the correct answer is C, because there is no mention of what retention policies they are using.

<https://support.google.com/vault/answer/7664657?hl=en#zippy=%2Cwhats-the-difference-between-a-hold-and-a-retention-rule>  
upvoted 5 times

🗳️ 👤 **05fe736** Most Recent 🕒 2 months, 2 weeks ago

**Selected Answer:** C

As a "first step to start an investigation into this leak" it sounds like creating a matter and placing ALL the user data on hold would be correct.

upvoted 1 times

🗳️ 👤 **virat\_kohli** 10 months, 1 week ago

**Selected Answer:** C

C. Instruct a Google Vault admin to create a matter, and place all the user data on 'hold.'

upvoted 1 times

🗳️ 👤 **danaracena** 1 year, 1 month ago

**Selected Answer:** C

First proper step is to create the investigation. If the question was "There's an emergency and need to check information right away" could be D. But as a first adequate, secure, and auditable step. Must create the hold first.

upvoted 1 times

🗳️ 👤 **karl19** 1 year, 3 months ago

**Selected Answer:** C

The first step to start an investigation into the potential intellectual property leak is:

C. Instruct a Google Vault admin to create a matter and place all the user data on 'hold.'

By creating a matter in Google Vault and placing the user's data on hold, you ensure that any relevant information related to the disgruntled employee's actions is preserved and cannot be modified or deleted. This allows the security team to analyze the data and investigate the potential leak.

**Selected Answer: A**

A. Configure an objectionable content rule.  
upvoted 1 times

A user joined your organization and is reporting that every time they start their computer they are asked to sign in. This behavior differs from what other users within the organization experience. Others are prompted to sign in biweekly. What is the first step you should take to troubleshoot this issue for the individual user?

- A. Reset the user's sign-in cookies.
- B. Confirm that this user has their employee ID populated as a sign-in challenge.
- C. Check the session length duration for the organizational unit the user is provisioned in.
- D. Verify that 2-Step Verification is enforced for this user.

**Suggested Answer: D**

Community vote distribution

🗳️ 👤 **professionalCrammer23** 5 months, 3 weeks ago

**Selected Answer: C**

Answer is C. Check that the session length is configured correctly first.

upvoted 1 times

🗳️ 👤 **virat\_kohli** 10 months, 1 week ago

**Selected Answer: C**

C. Check the session length duration for the organizational unit the user is provisioned in.

upvoted 1 times

🗳️ 👤 **jcloud965** 10 months, 3 weeks ago

**Selected Answer: C**

Session length can be as short as 1 hour and explain the behavior.

It can be a cookies issue but clearing them will have an impact on the user experience.

upvoted 1 times

🗳️ 👤 **ChizTheWhiz** 11 months ago

Correction, A will logout the user. B is for login challenge and this is disabled by default so C is the most feasible answer.

upvoted 1 times

🗳️ 👤 **ChizTheWhiz** 11 months ago

C is correct. as B will just logout the user on devices as per this article - [https://apps.google.com/supportwidget/articlehome?hl=en&article\\_url=https%3A%2F%2Fsupport.google.com%2Fa%2Fanswer%2F2537800%3Fhl%3Den&assistant\\_id=generic-unu&product\\_context=2537800&product\\_name=UnuFlow&trigger\\_context=a](https://apps.google.com/supportwidget/articlehome?hl=en&article_url=https%3A%2F%2Fsupport.google.com%2Fa%2Fanswer%2F2537800%3Fhl%3Den&assistant_id=generic-unu&product_context=2537800&product_name=UnuFlow&trigger_context=a)

upvoted 2 times

🗳️ 👤 **Richard\_Bagson** 11 months, 2 weeks ago

The FIRST STEP should absolutely be to clear the user's cookies. Especially seeing as the issue is affecting just one user, it is most likely to be an issue specific to the browser session on that user's machine. I would try the other steps after first clearing cookies. I think the correct answer is A.

upvoted 1 times

🗳️ 👤 **jcloud965** 10 months, 3 weeks ago

The first step should be to check if this is intended behavior = C

Clearing cookies will have an impact on the user experience.

upvoted 1 times

🗳️ 👤 **cloudguy2** 11 months, 3 weeks ago

Correct answer is C - checking the session length. User may be in an OU w/more rigid (less than 24 hours) while other in the org session length is 14 days <https://support.google.com/a/answer/7576830?hl=en&fi=1&sjid=18033713616032115750-NA>

🗳️ 👤 **ryuhei** 1 year, 1 month ago

**Selected Answer: B**

Answer is B !?

upvoted 1 times

🗨️ 👤 **cloudguy2** 11 months, 3 weeks ago

B is not correct as login challenge is only used when Google detects suspicious activity. ? indicates this is normal behavior not suspicious AND login challenge can be disabled by default for the org. correct answer is C "session length".

upvoted 1 times

🗨️ 👤 **userX100** 1 year, 1 month ago

**Selected Answer: C**

"Session length duration for the organizational unit the user is provisioned in" is the only policy that applies in this case.

upvoted 1 times

🗨️ 👤 **Jane1234YIP** 1 year, 1 month ago

**Selected Answer: A**

If a user is experiencing an issue where they are prompted to sign in every time they start their computer, while other users are prompted biweekly, it's likely a problem with their sign-in cookies. Sign-in cookies are used to keep users signed in for a certain duration, so they don't have to enter their credentials repeatedly during that period.

Option A is the first step to troubleshoot this issue

upvoted 1 times

🗨️ 👤 **klu23** 1 year, 1 month ago

**Selected Answer: C**

only C seems logical to me / first thing I would check in this case

upvoted 1 times

🗨️ 👤 **[Removed]** 1 year, 2 months ago

**Selected Answer: B**

Correct answer is B. No where did the question indicate that they're using 2fa. This user is new so maybe his ID isnt on the sign-in challenge

upvoted 3 times

Your organization has a new security requirement around data exfiltration on iOS devices. You have a requirement to prevent users from copying content from a Google app (Gmail, Drive, Docs, Sheets, and Slides) in their work account to a Google app in their personal account or a third-party app. What steps should you take from the admin panel to prevent users from copying data from work to personal apps on iOS devices? (Choose two.)

- A. Clear the "allow users to copy data to personal apps" checkbox.
- B. Turn on "Advanced Mobile Management."
- C. Navigate to Devices > Mobile and Endpoint > iOS Settings > Data Sharing > Data Protection.
- D. Navigate to Devices > Mobile and Endpoint > iOS Settings > Data Sharing > Open Docs in Unmanaged Apps.
- E. Clear the "allow items created with managed apps to open in unmanaged apps" checkbox.

**Suggested Answer:** CE

You have been asked to set up a new Google Group for your Human Resources department as they onboard staff. The membership of the group will change often. The HR team and all group members need to be able to send messages to and receive messages from all members of the group. They are worried that new staff may accidentally post personal information to the group. How do you configure the Google Group to prevent onboarded staff from sharing sensitive information to all group members?

- A. When provisioning the group, configure it as DLP enabled and select PII from the list of "Content Detectors".
- B. Configure the group so that members cannot view group conversations.
- C. Configure the group with new member post moderation.
- D. Configure the group so only Owners or Managers can post to the group.

**Suggested Answer: C**

Community vote distribution

C (100%)

🗨️ 👤 **virat\_kohli** 10 months, 2 weeks ago

Selected Answer: C

C. Configure the group with new members post moderation.  
upvoted 1 times

🗨️ 👤 **jcloud965** 10 months, 2 weeks ago

Selected Answer: C

Correct is C : Moderation. New messages must be approved by managers or owners to be sure there is no personal information posted. Member should be added using Google Groups to have the New member status instead of Google Admin. Publication restrictions for New members should be removed by group owner or admin.

A : DLP / Content Detectors work only on outbound messages

B : "all group members need to be able to send messages to and receive messages from all members of the group". If members cannot view group conversations, they can't receive too.

D : Owners or Managers can post to the group : same as B, if members cannot post group conversations, they can't send messages.

You are the administrator for a 30,000-user organization. You have multiple Workspace licensing options available to end users in your domain, according to their work responsibilities. A user may be transitioned to a different license type multiple times in a given year. Your organization has a high turnover rate for employees. What is the most efficient way to manage your organization's licensing?

- A. Use the Directory API to create a custom batch script that modifies the users license on a daily basis.
- B. Create a license assignment rule in the Google Admin console to set user licensing based on directory attributes.
- C. Use Google Cloud Directory Sync to modify user licensing with each sync, according to information available in the organization's LDAP.
- D. Update user licensing in the user portion of the Admin console on an as-needed basis.

**Suggested Answer: C**

Community vote distribution

C (75%)

B (25%)

🗨️ 👤 **jcloud965** Highly Voted 👍 10 months, 2 weeks ago

**Selected Answer: C**

C is correct. GCDS can use different rules to assign licenses based on LDAP query. GCDS can also (un)archive users the same way.

- A. The Directory API can't update license. License Manager API should be used.
  - B. The only assignment rule available in the Google Admin console is based on the Org Unit. There is no way to choose based on directory attributes.
  - D. Not efficient with 30,000 users and multiple changes in a given year
- upvoted 7 times

🗨️ 👤 **2shyshy** Highly Voted 👍 10 months, 2 weeks ago

Why is it C if it doesn't mention that they are using LDAP or Cloud Directory Sync. Just because of this I think it's B.

The security team for your organization is concerned about phishing attacks against your end user base. What two actions should you take to configure the strongest possible preventative measure against phishing attacks? (Choose two.)

- A. Train end users to mark messages as spam when they see something suspicious.
- B. Configure spoofing and authentication controls to warn end users about messages that are perceived as threats.
- C. Configure spoofing and authentication controls to quarantine messages that are perceived as threats.
- D. Enforce confidential mode for all messages sent and received from your Workspace domain.
- E. Force encryption on all inbound and outbound emails from your Workspace domain.

**Suggested Answer:** BC

**zanhsieh** Highly Voted 11 months, 3 weeks ago

**Selected Answer:** BC

Vote BC.

A: No. End users won't 100% follow what Workspace admin instructions even they trained.

D: No. Confidential mode is intended for internal use. The users still need to receive emails from outside domain, such as sales shall receive customer emails.

E: No. Force encryption inbound outbound doesn't help. Phishing attacks still happen.

**virat\_kohli** 10 months, 2 weeks ago

**Selected Answer:** BC

B. Configure spoofing and authentication controls to warn end users about messages that are perceived as threats.

C. Configure spoofing and authentication controls to quarantine messages that are perceived as threats.

upvoted 1 times

**jcloud965** 10 months, 2 weeks ago

**Selected Answer:** BC

I choose B & C - even you can't do both at the same time

Others options are not accurate

upvoted 1 times

**ChizTheWhiz** 11 months ago

**Selected Answer: BC**

B, C. as even if you enforce encryption for inbound and outbound, "encrypted" phishing emails can still be sent.

  **Jane1234YIP** 1 year, 1 month ago

**Selected Answer: BC**

B. Configuring spoofing and authentication controls to warn end users about messages that are perceived as threats can help raise awareness among end users and prompt them to exercise caution when encountering suspicious emails. This warning can include banners or visual indicators that notify users about potential phishing attempts, enabling them to be more vigilant while reviewing emails.

C. Configuring spoofing and authentication controls to quarantine messages that are perceived as threats can provide an additional layer of protection. By quarantining suspicious messages, the security team can closely analyze them and determine if they are indeed phishing attempts before releasing them to end users' inboxes. This helps prevent potentially harmful messages from reaching end users until they are verified to be safe.

Options A, D, and E do not directly address phishing prevention

Your organization recently bought 1,000 licenses for Cloud Identity Premium. The company's development team created an application in the enterprise service bus (ESB) that will read user data in the human resources information system (HRIS) and create accounts via the Google Directory REST API.

While doing the original test before production use, the team observes a 503 error coming from Google API response after a few users are created. The team believes the ESB is not the cause, because it can perform 100 requests per second without any problems. What advice would you give the development team in order to avoid the issue?

- A. Use an exponential back-off algorithm to retry failed requests.
- B. Use the domain-wide delegation API to avoid the limitation per account.
- C. Use the batch request architecture, because it can pack 1,000 API calls in one HTTP request.
- D. Switch from REST API to gRPC protocol for performance improvement.

🗳️ **nhiguchi** 1 year, 1 month ago

**Selected Answer: A**

A 503 error response indicates a temporary problem that will likely be resolved by retrying after a period of time. Exponential backoff will help in this case because it is an efficient way to retry while allowing time for the temporary problem to be resolved.

🗨️ 👤 **Cert1Magic2** 10 months, 3 weeks ago

Why you feel that sending 1000 of request in a batch will not create the same issue? Better solution will be to go for exponential backoff retry which works as "Exponential backoff is an algorithm that uses feedback to multiplicatively decrease the rate of some process, in order to gradually find an acceptable rate. These algorithms find usage in a wide range of systems and processes, with radio networks and computer networks being particularly notable."

A user does not follow their sign-in pattern and signs in from an unusual location. As an admin, what should you do in response to this alert for this user during this investigation?

- A. Add Two Factor Authentication to the Domain
- B. First, suspend the account and then investigate
- C. Enhance your security alerts for tracking sign-in patterns
- D. Investigate the account for unauthorized activity in the Login and Security Audit Log

**Suggested Answer:** B

or B

google said, always suspend first in the docs

upvoted 1 times

🗨️ **JessiePiper** 3 months, 3 weeks ago

**Selected Answer: B**

I agree with B here. In this specific instance, where you've already confirmed suspicious activity and an unusual login location, the logs wouldn't provide any additional information that would change your immediate course of action. I think you are still missing some steps in between, but B makes the most sense to me.

upvoted 1 times

🗨️ **Nico282** 8 months, 4 weeks ago

**Selected Answer: B**

I was going with the sensible choice to investigate on the logs, but as there is no "Login and Security Audit Log" in the admin console, I believe that "Suspend first" is the answer Google wants in this scenario: <https://support.google.com/a/answer/2984349?hl=en>

Personally I wouldn't suspend the CEO account on a business trip before checking for additional clues.

upvoted 3 times

🗨️ **examprof** 9 months ago

Option B. Please follow me:

This link includes precisely the scenario described here ("user does not follow their sign-in pattern and signs in from an unusual location") as an example of suspicion login:

<https://support.google.com/a/answer/7102416?hl=en>

As a first step, it instructs the admin to "Ask the user with the suspicious login if they remember signing in", which is not included as a possible answer in the alternatives.

Then, as a second step, it instructs admin to "follow the Administrator security checklist", which may be found here:

<https://support.google.com/a/answer/2984349?hl=en>

The very first step is "SUSPEND a user to prevent unauthorized access." followed by "Investigate the potentially unauthorized activity...".

At last, there's no such thing named "Login and Security Audit Log" in Google Workspace (not with this name).

I vote for Option B. Suspend first, investigate after.

**Selected Answer: D**

D. Investigate the account for unauthorized activity in the Login and Security Audit Log

upvoted 1 times

🗨️ 👤 **jcloud965** 10 months, 2 weeks ago

**Selected Answer: B**

Answer is B. Identifying and securing compromised accounts should start by temporarily suspending the suspected compromised user account to prevent unauthorized access, then investigating the potentially unauthorized activity and finally restoring the account.

<https://support.google.com/a/answer/7102416?hl=en>

Answer D : We already know that user signed in from an unusual location. Login Audit Log will provide the unusual IP address only. There is no "Security Audit Log" in the admin console.

upvoted 2 times

**Selected Answer: D**

Vote D. Remember we need to have the root cause analysis, then decide which action would take.

A: No. Adding 2FA is one of the following-up actions.

B: No. Suppose a CxO logging into the domain in the customer site just for the meeting (he obviously won't tell Workspace admin his schedule), of course Workspace admin won't suspend the CxO access immediately.

C: No. Again, this is the following-up action.

D: Yes. Knowing the root cause is the first step to take.
